JingZhang AI Spine

京 张 智 脊

Overall bird's-eye view · concept art (not a site photo)

Translate the historic Jing-Bao railway corridor into an intelligent spine: a 9.7 km heritage-park slow corridor from Beijing North Station to Qinghe, linking seven rail stations and the three key areas of Zhongzhiyuan, the AI Origin Community and Dazhongsi, so heritage, ecology, industry and AI scenarios grow on the real urban fabric.

Proposal ID: zain / jingzhang-ai-spine · version v0.2.6 · 2026-08-30

Status: AI-agent-generated concept for professional deepening, not statutory planning

Boundary: provisional rough constraint (PROV-SITE-001); all metrics recalculated once official data arrives

01 • Design basis and site fidelity

Design basis

· Official pre-announcement: project name, three-level scope boundaries and areas (approx. 43.6 / 11.4 / 3.684 sq km)

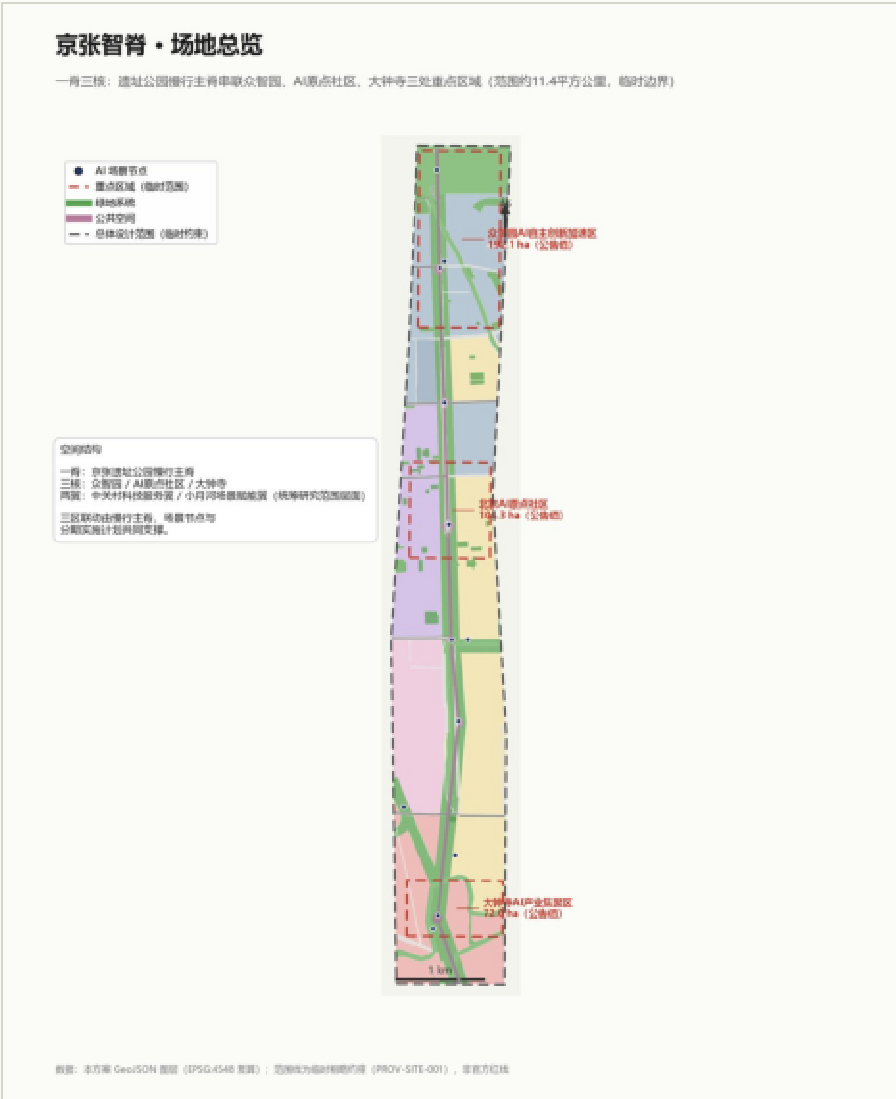
· Agent taskbook: ten co-creation principles, three areas and two wings, six agent tasks

· Site package: enums, ranges, standard snapshots and schemas

· Public source registry: formal-ready / background / provisional / unusable levels

· OpenStreetMap (ODbL 1.0): real roads, rail, waterways, stations and anchors

Site fidelity: every existing-condition layer comes from real OSM data; OSM is used only for existing-condition representation, never for official boundaries, precise areas or planning controls. Data gap: the official precise boundary is unpublished; all area metrics are recomputed from the provisional boundary in EPSG:4548 and marked low-confidence.



Evidence chain of the submission package (Design basis and site fidelity)

02 • Overall concept and naming

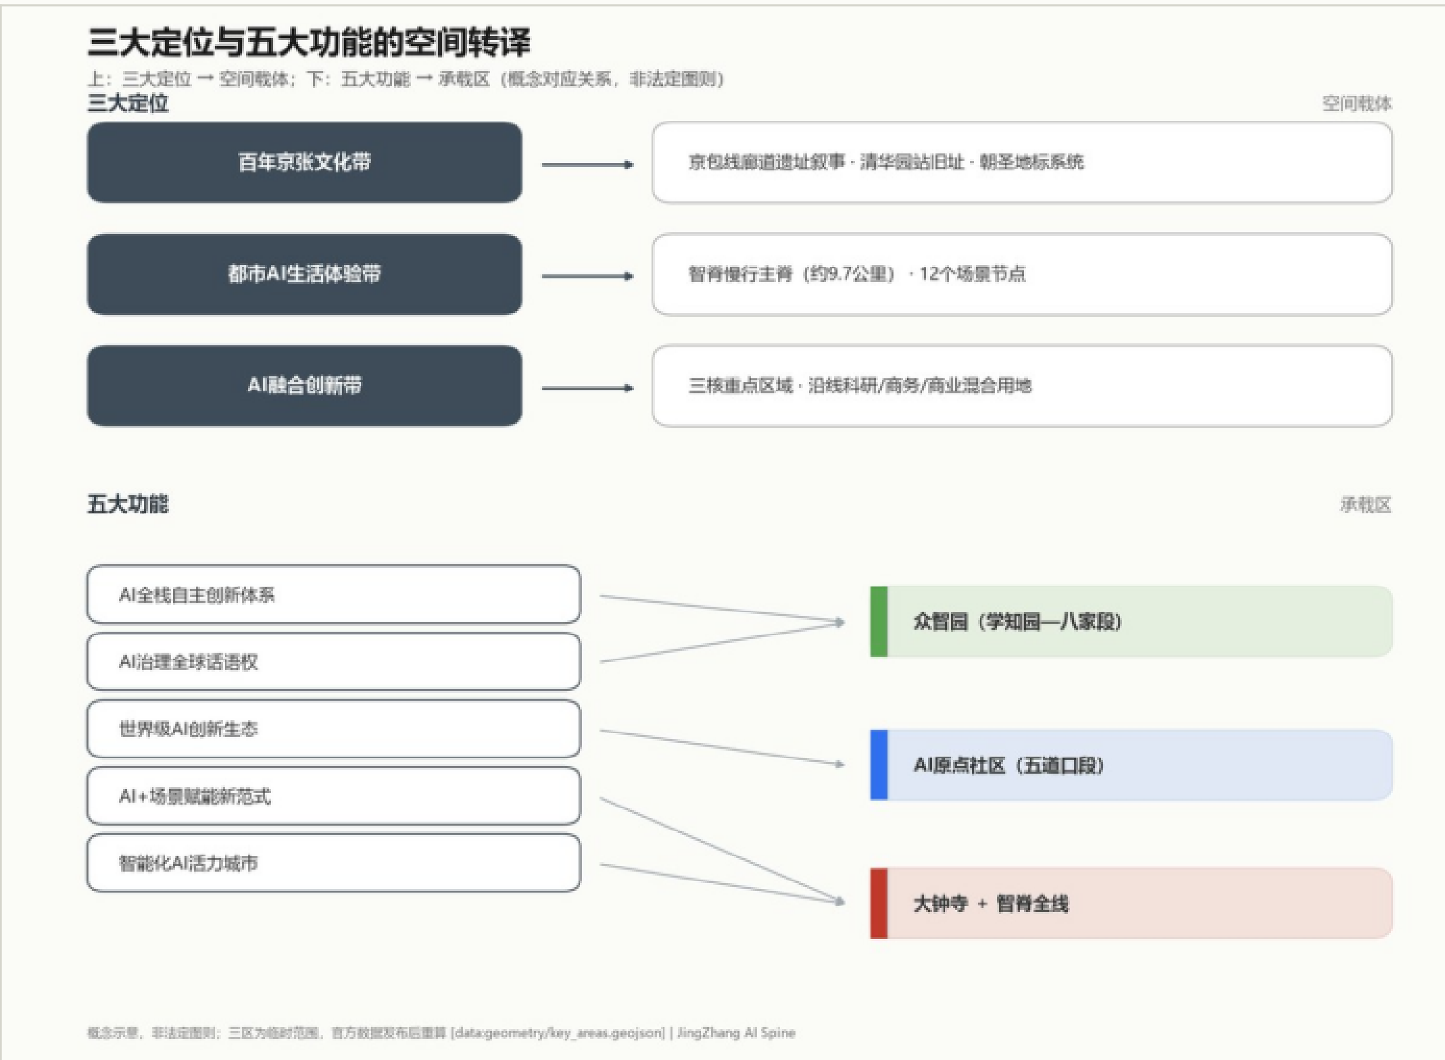
Spine—Cores—Stations—Lanes

· The belt name JingZhang AI Spine: both the physical heritage ridge and the spine of intelligent innovation

· Four naming levels: Spine (the belt) · Cores (key areas) · Stations (7-station scenario nodes) · Lanes (community slow lanes)

· Visual identity: a rail cross-section x neural synapse mark in slate gray + AI blue (original concept, not trademark-cleared)

Visual identity concept



Three positionings & five functions translated to space

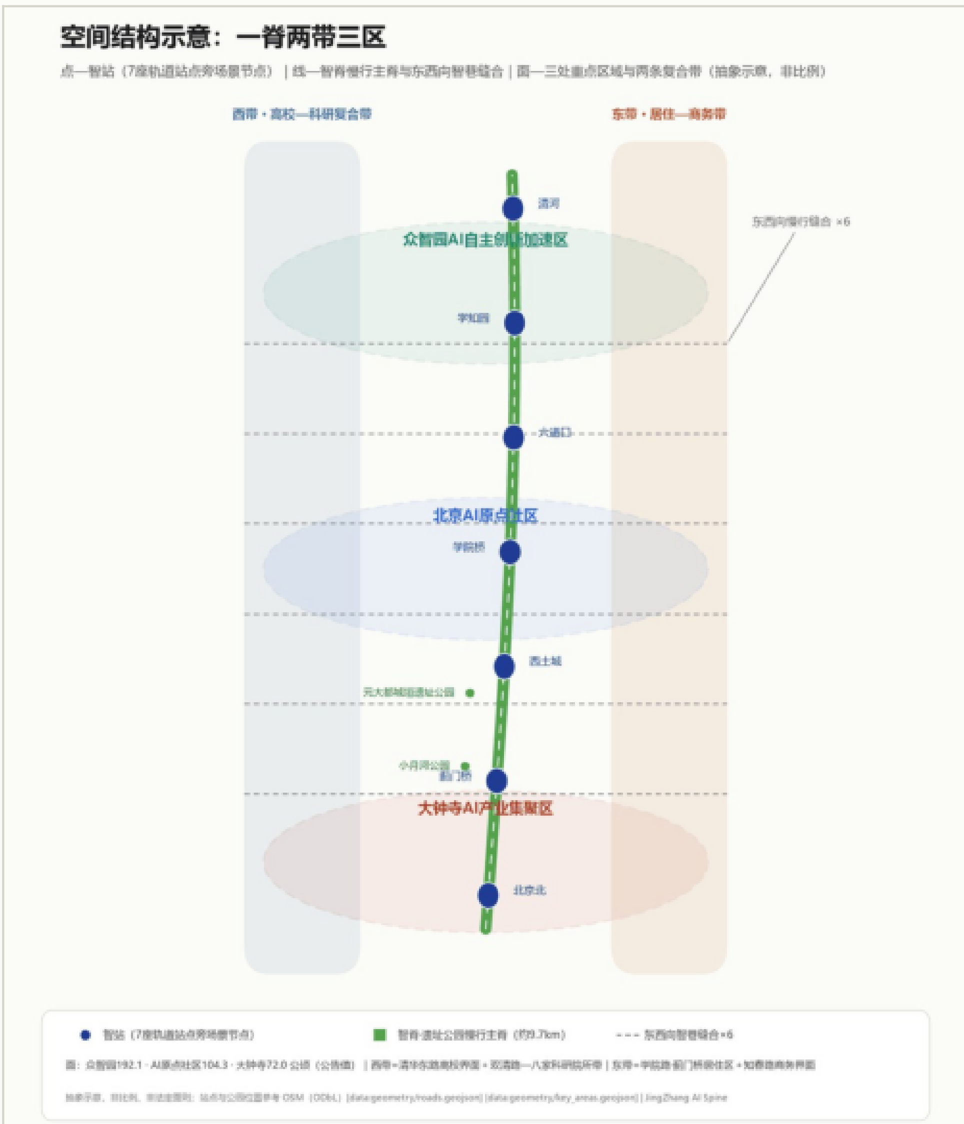
03 • Spatial structure: one spine, two belts, three districts

· Spine: heritage-park slow corridor along the Jing-Bao alignment (park green belt approx. 179.4 ha), linking Yuan Dadu Relics Park and Xiaoyue River Park

· Belts: western university-research belt (Qinghua East Road interface, Shuangqing-Bajia institutes); eastern residential-business belt (Xueyuan Rd/Jimenqiao housing, Zhichun Rd frontage)

· Districts: Dazhongsi AI Industry Cluster (72.0 ha) · Beijing AI Origin Community (104.3 ha) · Zhongzhiyuan AI Acceleration Area (192.1 ha)

· Stitches: six east-west slow-mobility stitches responding to the corridor barrier



Spatial structure schematic (abstract points-lines-areas)

04 • Three key areas

Concept renderings

· Dazhongsi: AI-native consumption and business testbed, intelligence-harbor square + heritage locomotive + logistics demo

· AI Origin Community: community-scale carrier of a world-class AI ecosystem, open-source hall + memorial + maker market

· Zhongzhiyuan: full-stack independent AI innovation, compute/pilot platform + governance sandbox + developer conference

Dazhongsi AI Industry Cluster

Beijing AI Origin Community

Zhongzhiyuan AI Acceleration Area

05 • Twelve AI scenario cards

All anchored at real stations and places

SC-01 Spine heritage AR guide

SC-02 AI-native retail testbed

SC-03 Intermodal logistics demo

SC-04 University AI maker market

SC-05 Embodied-robot promenade

SC-06 Open-source community hall

SC-07 AI Origin memorial

SC-08 Elderly companion pilot

SC-09 Compute/pilot-test platform

SC-10 AI governance sandbox

SC-11 Qinghe wetland monitoring

SC-12 Developer conference venue

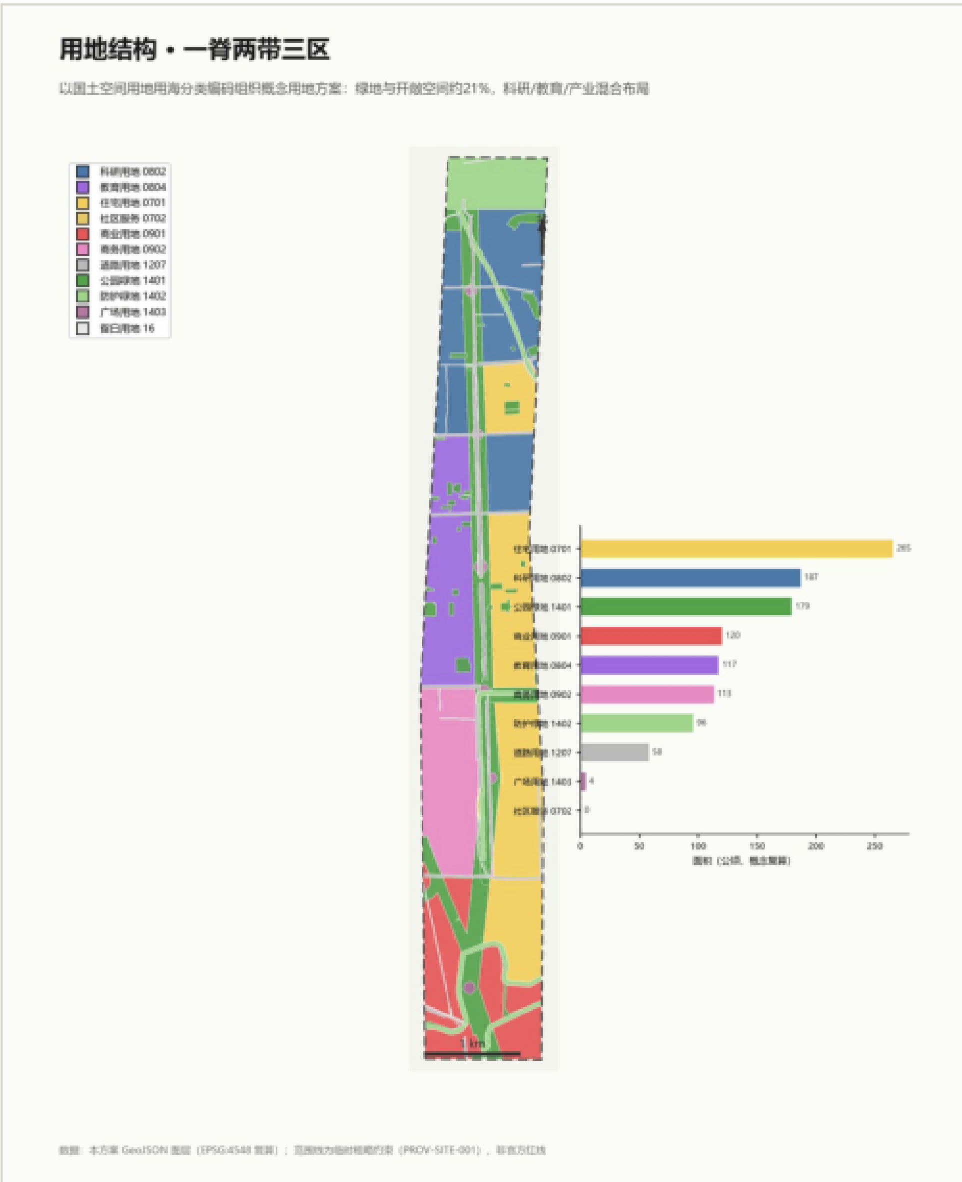
Twelve AI scenario card images (concept art, not site photos) · one to two Chinese figures per frame, no crowds

06 • Land use, building scale, retain-renovate-demolish

· 146 land-use units partitioned on the real street skeleton, shared edges, no gaps or overlaps

· Green/open space approx. 279.7 ha (24.5%) · roads approx. 58.0 ha · residential approx. 265.4 ha · research & education approx. 304.5 ha · commercial approx. 233.4 ha

· Treatment: renovation and retention led (film studio, CAM institutes); new build is conceptual massing only



Land-use structure and units

07 • Mobility, blue-green space and urban character

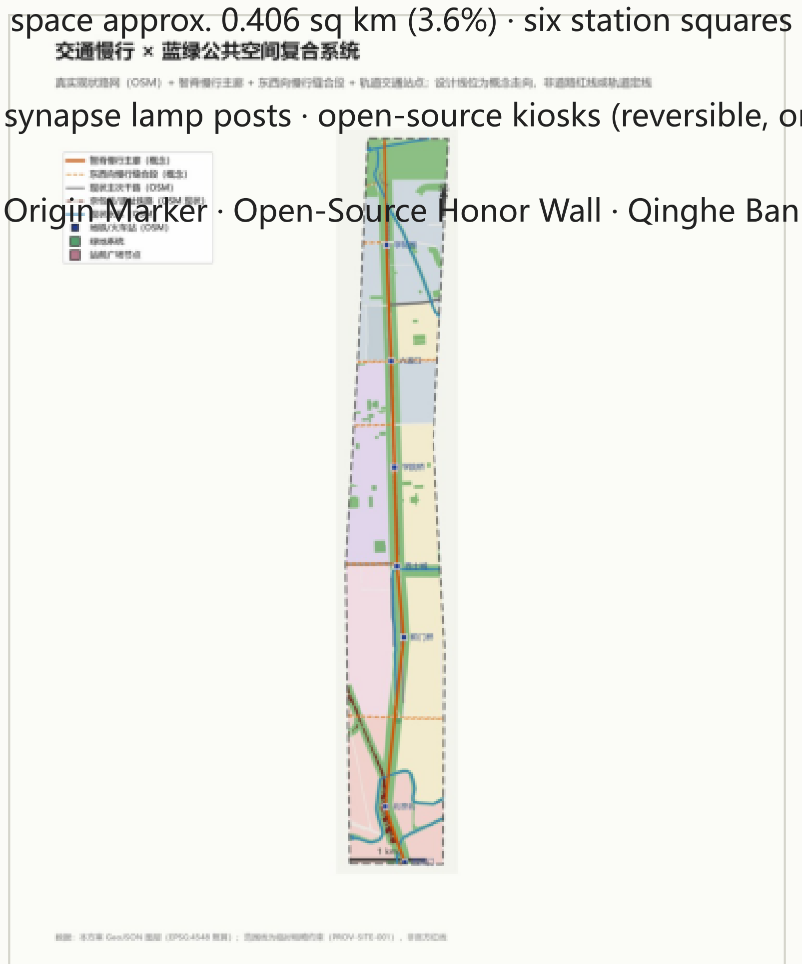
· Mobility: stitch first, embellish second - the 9.7 km Spine corridor plus six stitches; no new roads

· Existing major roads 45.1 km · 7 rail stations in site (Changping south extension + Line 13 + Beijing North)

· Blue-green: green ratio 24.1% · public space approx. 0.406 sq km (3.6%) · six station squares + promenade

· Component library: rail-profile seats · synapse lamp posts · open-source kiosks (reversible, original concepts)

· AI pilgrimage landmarks (3+1): Spine Origin Marker · Open-Source Honor Wall · Qinghe Bank Lookout + annual honor review



Composite mobility / blue-green system (platform-required figure)

Component library schematic

08 • Core metrics and evidence chain

All recomputed from submitted geometry in EPSG:4548

· Site area 11,412,825 sq m (approx. 11.41 sq km) · green ratio 24.1% · public space ratio 3.6%

· Building density 12.8% · conceptual total floor area approx. 10.44 million sq m (low-confidence massing)

· Existing major roads 45.1 km · designed network 22.4 km · 7 rail stations · 3 key areas

· FAR and building height: pending official data (unknown); no conclusion given

· Evidence: geometry/*.geojson + metrics.json + three matrices + four-gate self-check PASS

Core metrics and evidence chain

09 • Phasing and compliance

A discussion framework, not an implementation approval

· Phase 1 2026-2029: Beijing North-Jimen gateway and south Spine (approx. 3.84 million sq m) - visible public scenarios

· Phase 2 2029-2032: Xitucheng-Wudaokou Origin Community and middle Spine (approx. 3.95 million sq m) - community operation

· Phase 3 2032-2035: Liudaokou-Xuezhiyuan Zhongzhiyuan and north Spine (approx. 3.62 million sq m) - research platforms complete the belt

· Risks: unpublished official boundary, heritage lines pending, commercial ownership pending, OSM currency limits

· Copyright: all originally generated; OSM under ODbL attribution; license COMMUNITY-DISPLAY-ONLY
