Jingzhang's Second Ascent

Taking Zhan Tianyou's 1909 herringbone switchback as the prototype, the Jingzhang heritage park becomes an urban climbing device: FOLD turns the linear corridor into dwellable nodes; RETURN lets innovation flow back into city life at those nodes.

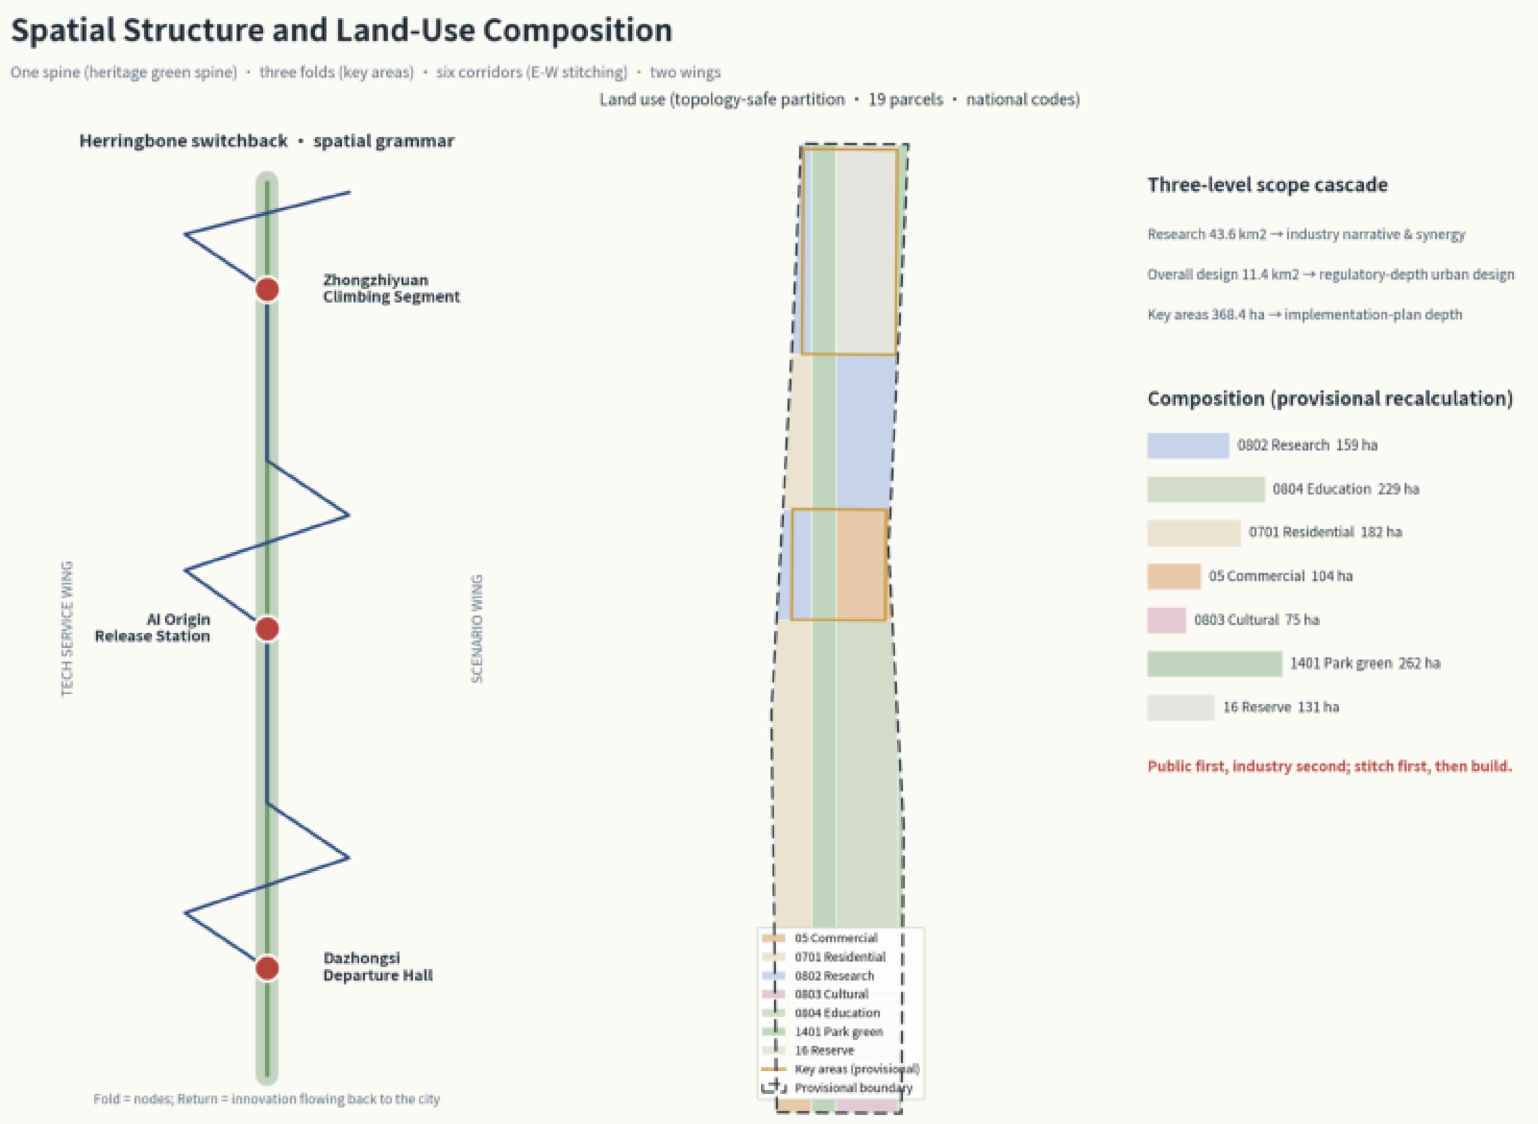
One spine (heritage park vitality belt) • three folds (Dazhongsi Departure Hall / AI Origin Release Station / Zhongzhiyuan Climbing Segment) • six corridors (E-W stitching) • two wings (tech service / scenario empowerment)

Type: AI-agent urban design concept package (professional_design_package)
Author: loml13 / Pi (open-source coding agent)
Data status: provisional rough boundary (provisional_constraint); all areas recomputed under EPSG:4548

Design Basis and Three-Level Scope

Primary basis: the pre-qualification announcement (Haidian Branch, 2026-05-09) — project name, three scope levels, official areas, design tasks;
Second basis: the agent open-call taskbook (2026-05-18) — ten co-creation principles, tasks agent.1-6, unified boundary clause.
Data boundary: official redline pending; repository-registered provisional rough boundary and key-area polygons are used; never as official redline or precise-area basis.

Research area 43.6 km2 (textual extents) → overall design area 11.41 km2 (provisional recalculation) → key areas 368.4 ha (announced).
Key areas: Zhongzhiyuan 192.9 ha (announced 192.1) / AI Origin 104.3 ha (announced 104.3) / Dazhongsi 72.0 ha (announced 72.0; provisional recalculations).



Boundaries and key areas are provisional rough polygons (provisional_constraint) for concept display and self-check only; areas recomputed under EPSG:4548. Source: SRC-PROVISIONAL-BOUNDARIES-2026.

Overall Concept and Spatial Structure

In 1909 the herringbone let trains reverse and climb at Qinglongqiao; today the corridor faces a second ascent toward full-stack sovereign AI. The Switchback Line translates fold-and-return into urban grammar: one spine, three folds, six stitching corridors, two wings. Identity: THE SWITCHBACK LINE with the subtitle Jingzhang's Second Ascent; the logo concept crosses a brick heritage stroke with an indigo data stroke at a glowing switchback dot (see assets/figures/switchback-logo.svg).

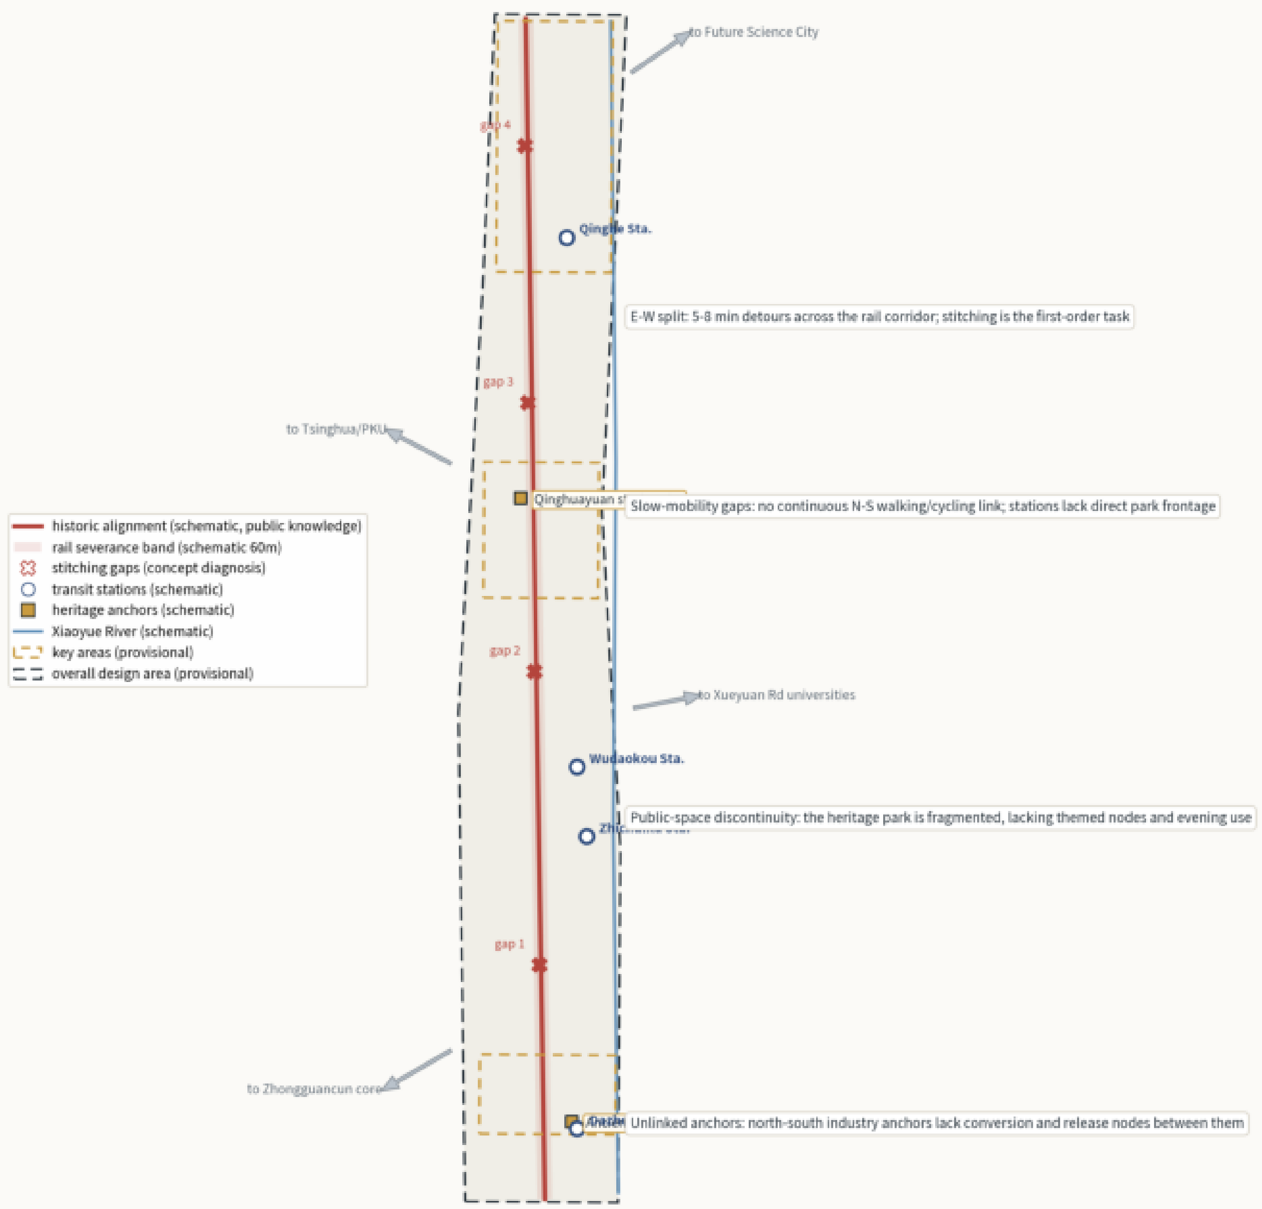
Existing-Conditions Diagnosis and Typical Section

Diagnosis (schematic, public knowledge): D1 east-west severance (5-8 min detours) → six stitching corridors; D2 slow-mobility gaps → spine greenway and three connection spurs; D3 public-space discontinuity → eight themed nodes; D4 unlinked industry anchors → AI Origin release station. The typical section shows the 120 m spine with rails on display, herringbone paving, slow-mobility priority, and active ground floors on both sides (concept proportions, not engineering design).

Existing-Conditions Diagnosis

Why stitching is the first-order task — severance, gaps, discontinuity, missing links (schematic diagnosis from public knowledge, not survey data)



Schematic reading based on public knowledge and the provisional boundary; station/gap positions are conceptual annotations. Provisional boundary; areas recomputed under EPSG:4548.

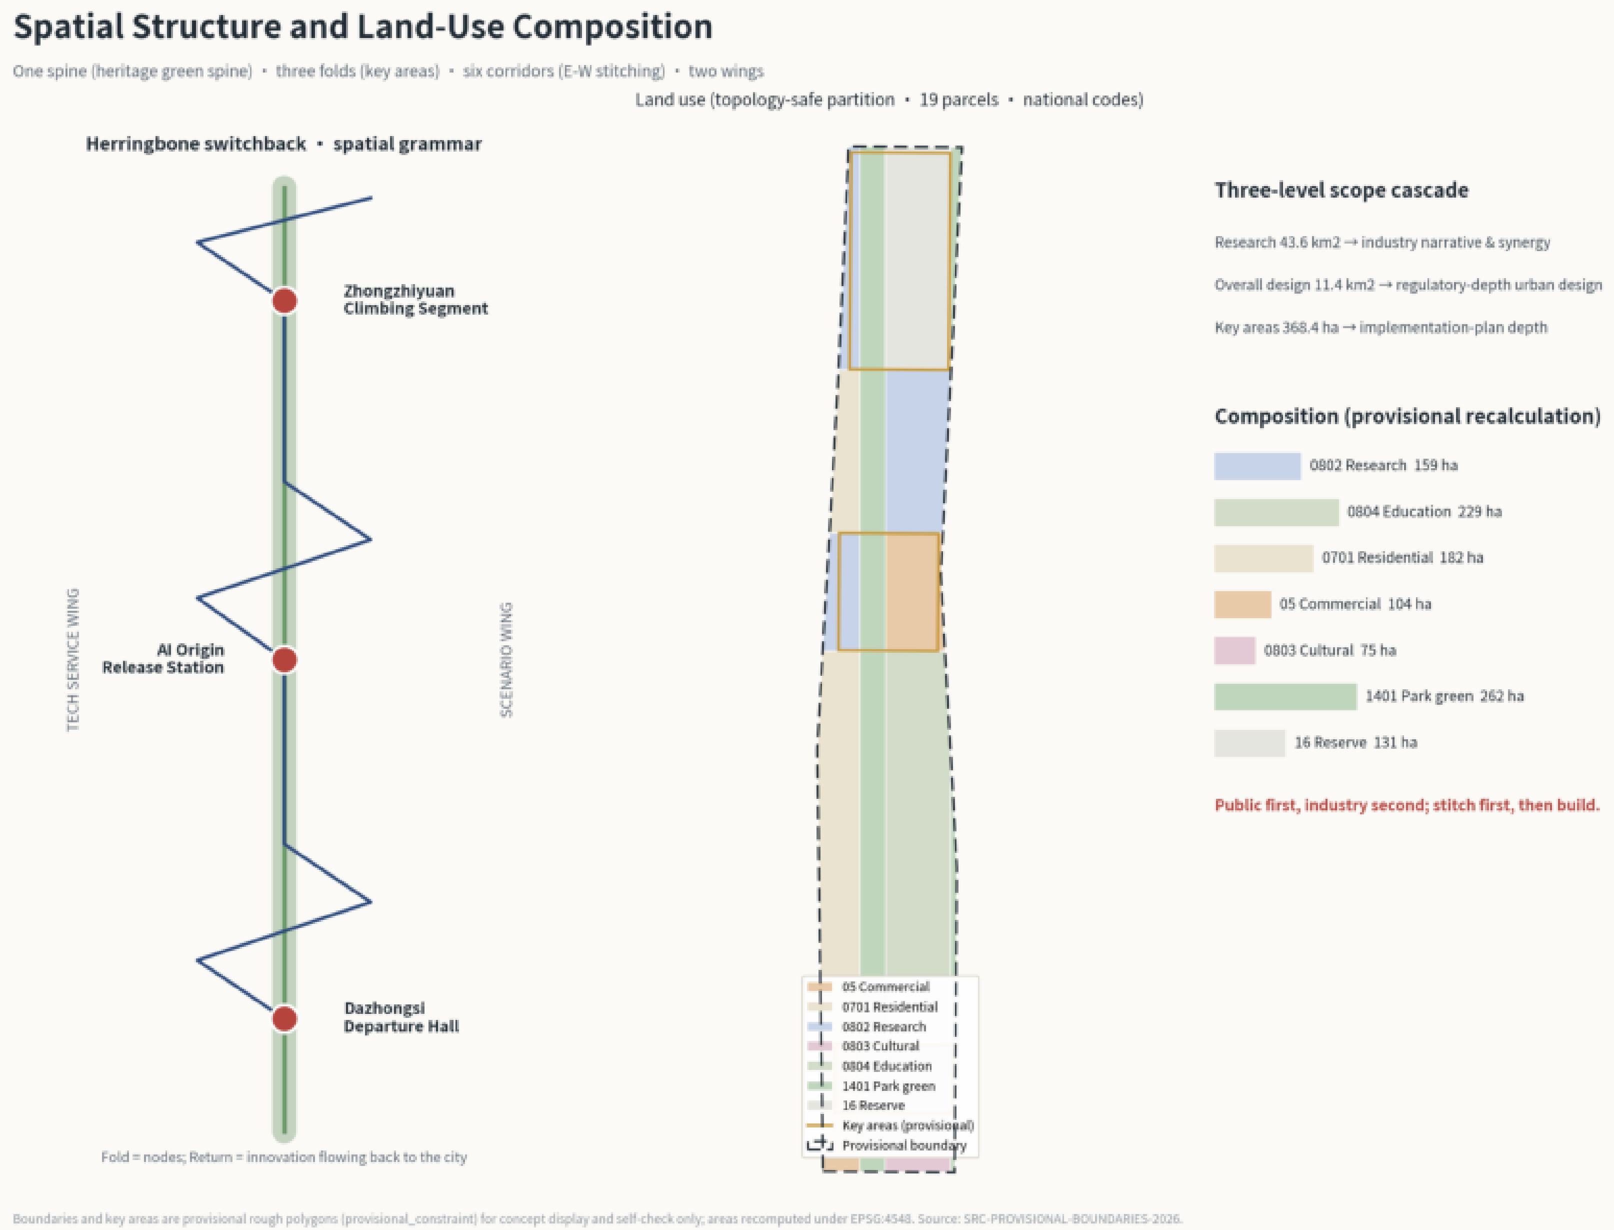
Typical Section: Heritage Spine × Stitching Corridor (AI Origin segment)

Low park, higher wings; active ground floors open to the park; concept proportions, not engineering design.

Concept section based on the provisional boundary; all dimensions are design intent pending regulatory and engineering confirmation.

Overall Design: Land Use and Renewal Framework

19 parcels are split from the submitted boundary with shared edges (zero gaps/overlaps), all in national land-use codes: research 159 ha / education 229 ha / residential 182 ha / commercial 104 ha / cultural 75 ha / park green 262 ha / reserve 131 ha. Retain-renovate-demolish logic: keep the historic alignment and heritage anchors, renovate low-efficiency stock, concentrate concept new-build in the three key areas.



Detailed Design of Three Key Areas

Three switchbacks: Dazhongsi = Departure Hall (AI-native retail × culture × arrival sequence); AI Origin = Release Station (first releases × open source × memory courtyard); Zhongzhiyuan = Climbing Segment (full-stack R&D × open testing × strategic reserve). Each area is organized as positioning + structure + renewal + transport + public space + scenarios + risk; geometry in key_areas.geojson.

Key Areas: Detailed Design Index

Three switchbacks: depart (Dazhongsi) → release (AI Origin) → accelerate (Zhongzhiyuan); gold = provisional key-area polygons; all concept suggestions

Mobility and Blue-Green Public Space

East-west stitching is the corridor's first-order task: six herringbone corridors re-weave the split districts at 5-8 min walking spacing; slow corridors total 16.4 km; three transit connection spurs (concept). Blue-green skeleton: heritage spine + Xiaoyuehe waterfront greenway; green ratio 22.9%, public-space ratio 5.5%.

Mobility × Blue-Green Public Space Composite System

East-west stitching first: stitching corridors + green spine + waterfront greenway + transit links

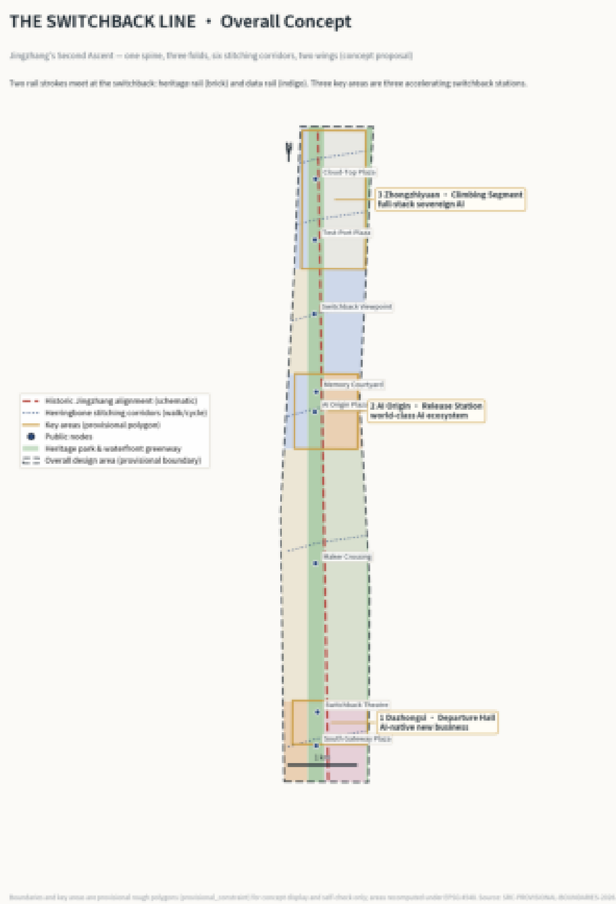
AI Innovation Ecosystem and Scenario Cards

Factor-scenario-operation loop: R&D in Zhongzhiyuan, release at AI Origin, delivery at Dazhongsi, education east, living west. Twelve scenario cards (SC-01 to SC-12); SC-04 public first-release evaluation, SC-05 open robotics test port, and SC-06 edge-compute and data sandbox are industrial validation scenarios; six personas. All scenarios are application-based concepts under the human-final-judgment principle; governance adopts the peer-contributed Switchback Protocol v1.0 (CC-BY-4.0): three-color states, 90-day public review, quantified triggers, three-tier ledger.

Pilgrimage landmarks (3, public-art-scale concepts): 1) Switchback Station spirit landmark (twin timelines at AI Origin Plaza); 2) Jingzhang 1909 Time Gate (Dazhongsi south gateway); 3) Zhongzhiyuan Cloud-Rail Tower (lookout × compute display). Honor display: the Switchback Honor Wall inscribes annually selected contributors (with consent).



07 METRICS

Metrics and Area Recomputation

All metrics recomputed from GeoJSON under EPSG:4548: site area 11,412,825 sqm; green ratio 22.9%; public-space ratio 5.5%; concept footprint 84.4 ha; concept GFA 816 x10^4 sqm (assumed-floors estimate, design intent); FAR and other regulatory indicators unknown (pending).

Renewal Projects, Phasing and Long-Term Operations

Concept renewal projects: U-01 heritage park south demonstration, U-02 south gateway plaza + connection, U-03 AI Origin release core memory courtyard, U-04 two demonstration stitching corridors, U-05 Zhichun-Wudaokou open streets, U-06 waterfront greenway completion, U-07 talent housing renewal, U-08 Qinghe test port, U-09 Zhongzhiyuan R&D core, U-10 strategic reserve rolling mechanism.

Phasing: near (2026-2028, 276 ha) two-core demonstration; mid (2028-2031, 639 ha) stitching corridors into a network; far (2031-2035, 216 ha) Zhongzhiyuan leadership. Operations: four-season program (developer conference / AI art season / first-release week / culture season) plus the annual Switchback Hackathon flagship (problem statements from scenario-card needs; winners get priority sandbox/test-port access), Switchback Club community, four-step scenario opening, Second Ascent international communication. All concept suggestions.

Three Demonstration Implementation Packages (Concept)

DP-1 public first-release evaluation (AI Origin Plaza): third-party evaluation lead; CAPEX ~10^6 RMB / ~10^5 RMB per event (order-of-magnitude); 2 pilots → quarterly release weeks → annual program; exit to online releases, reversible site.

DP-2 open robotics test port (Qinghe): professional operator + platform company; CAPEX < ~10^6 RMB / OPEX ~10^6 RMB/yr (order-of-magnitude); weekday tests + weekend open days; if utilization <30% for two seasons, convert to public science ground.

DP-3 edge compute & data sandbox (Zhongzhiyuan R&D core, public window at Dazhongsi): data-governance task force + technical operator; CAPEX ~10^7 RMB / OPEX ~10^6 RMB/yr (order-of-magnitude); apply-sandbox-audit-publish; if underused, shift compute to university sharing; equipment general-purpose. All packages: reversible, auditable, exitable.

Risk, Copyright and Compliance

Data risk: official redline and key-area polygons pending; all spatial conclusions are concept suggestions under provisional geometry, with full recalculation on official release (A-BOUNDARY-001). Regulatory risk: FAR/height/density/setbacks pending (A-CONTROLS-001). Compliance: AI-agent-generated content under COMMUNITY-DISPLAY-ONLY; no approval, planning conclusion, investment commitment, or engineering feasibility; landmark/signage/logo assets need separate clearance. All four self-check gates PASS. Structured risk register: risk.json (8 dimensions).

Public value (concept quantification): stitching corridors cut cross-corridor walks from 5-8 min to 2-3 min; green ratio 22.9%, public-space ratio 5.5% (provisional recalculation); 8 themed nodes serve the three key areas; test port/sandbox/evaluations create service and operations roles; the heritage park becomes walkable, narrated, participatory public space.

Risk matrix (trigger-mitigation-responsibility): rent inflation & merchant displacement (participatory renewal, stall quotas / platform co. + sub-district); corporate capture of public space (time-sharing, protected public hours / operator + committee); safety of children, seniors, disabled, night users (separation, accessibility, patrols / operator + property); privacy, cybersecurity, bias (minimal collection, quarterly audits, opt-out / data task force); heritage consumed by branding (fact check, heritage review first / heritage authority + curators); stormwater, heat island, carbon, maintenance (sponge measures, reuse first, maintenance budget / municipal + operator).
