Jing-Zhang Timekeeping Belt

Keeping Civic AI On Time

京张授时带 · 让城市 AI 服务对得上时

Every AI service in public space holds a service timetable with an expiry date; it is periodically time-checked against a human-maintained baseline — overdue services degrade automatically to their guaranteed non-AI path; out-of-tolerance services degrade with public retest conditions; every delay enters an append-only public ledger.

One spine · three stations · eight time-check points · twelve scenarios · three landmarks

Centennial Jing-Zhang AI Innovation Belt open call · formal submission package
Author: Claude Code × Youhai020616 · v2.0 · August 2026
All spatial content is conceptual, on a provisional rough boundary — not statutory planning

Enter w/ timetable	Periodic check	On-time renewal	Degrade on expiry	Public ledger	Re-check or retire

Time Check Protocol • ten timetable fields and six service gates

Twelve required timetable fields

① service_id

② public purpose

③ scope (users / node / excluded uses)

④ minimum data (no personal data)

⑤ responsible human role

⑥ non-AI equivalent path (statutory floor)

⑦ baseline ref (version / status)

⑧ time-check window (⩽180 days)

⑨ degrade plan (trigger / steps / recovery)

⑩ delay ledger (public, append-only)

⑪ version binding (evolution voids the pass)

⑫ probe policy (red-blue checks)

Six service gates (evidence-driven, no skipping)

T0	T1	T2	T3	T4	T5
problem & site	data & permission	baseline & human path	sandbox drill	timed window	renew / degrade / retire

Key design: the T4 window is the expiry date — approving a service and scheduling its exit are one act. Continuing requires evidence (a passed time check); stopping is the default when no one acts, so pilot-forever is structurally impossible.

Statutory anchors: Barrier-Free Environment Law Art.39 (public service venues shall retain staffed traditional service) • Generative AI Interim Measures Art.14 (remediation) & Art.15 (complaint feedback) • State Council Doc. 2020-45 (traditional and smart services in parallel, background)

Three drill suites 12/12 (all input-hashed): protocol structure D1-D6 6/6 • baseline replay E1-E3 3/3 • evolution & probes E4-E6 3/3 (version voiding / red-blue probes / lineage)
Real deployment: not authorized / not run • role unassigned • baseline not built

Fig.01 Overall concept & structure

Jing-Zhang Timekeeping Belt • Overall Concept

FIG-01 OVERVIEW

One spine, three stations, eight time-check points, two wings — keeping civic AI on time

Time Check Protocol — civic AI services expire by default; renewal requires evidence

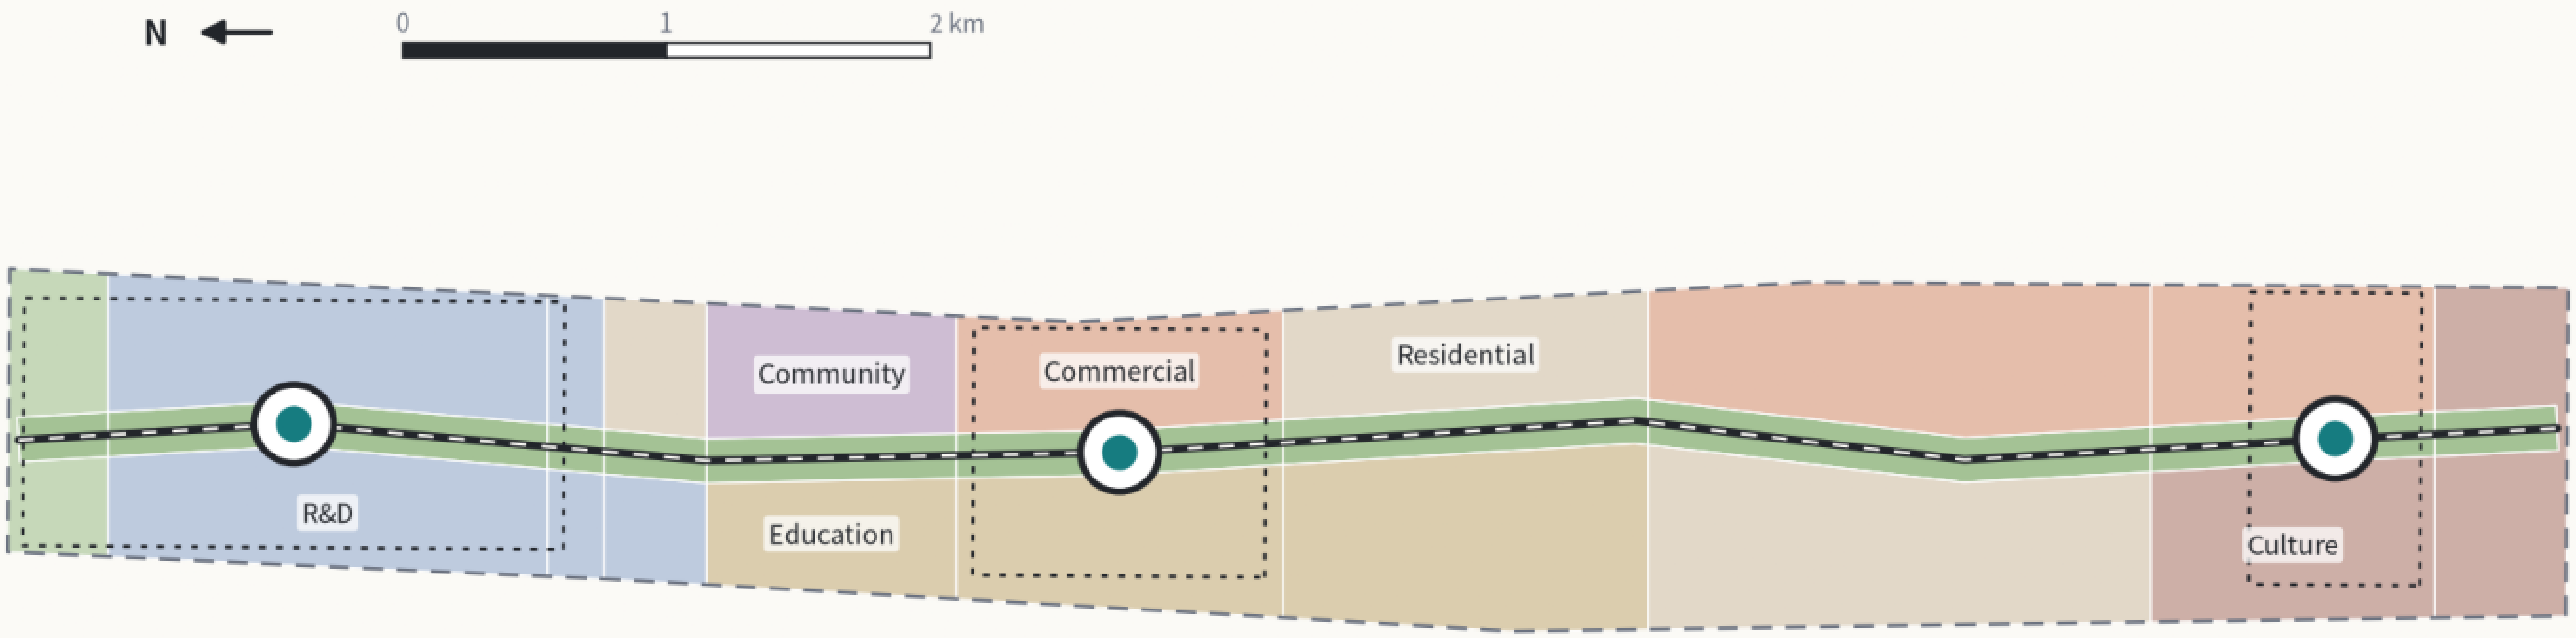
Service enters with timetable (T4 window)	Periodic time check replay vs baseline	On-time renewal next window ≤180d	Overdue/out-of-tol. → degrade to non-AI path	Public delay ledger append-only	Re-check & renew or retire (T5)

All geometry uses a provisional rough boundary for concept illustration only — not an official redline or precise-area basis; full recalculation once official polygons arrive. Drawn deterministically from package GeoJSON + metrics.json | Conceptual proposal, not statutory p

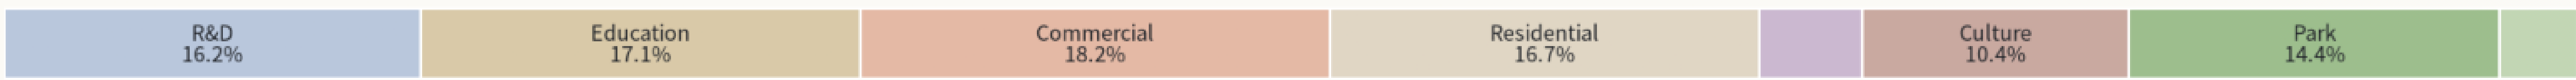
Fig.02 Land-use partition

Complete Land-Use Partition & Spine Park Band

28 parcels seamlessly cover the provisional site • coverage 1.000000 • recomputed in EPSG:4548



Land-use composition (conceptual recalculation, not statutory) — all values subject to provisional boundary



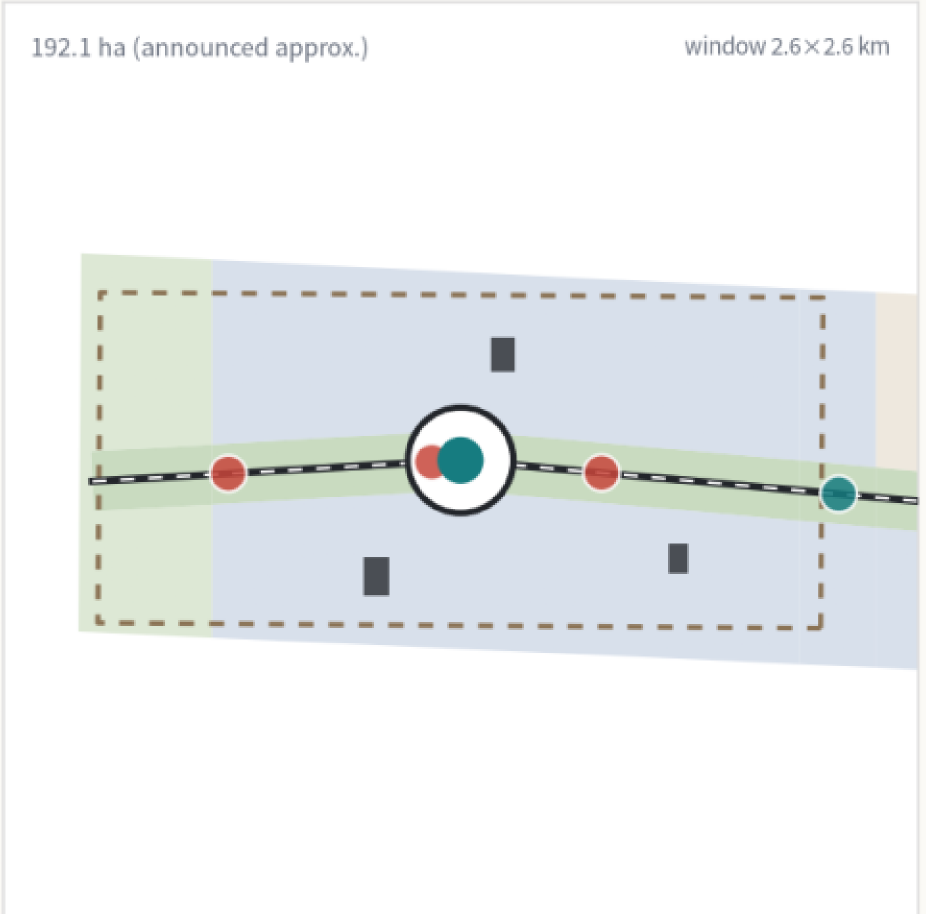
All geometry uses a provisional rough boundary for concept illustration only — not an official redline or precise-area basis; full recalculation once official polygons arrive. Drawn deterministically from package GeoJSON + metrics.json | Conceptual proposal, not statutory p

Three Timekeeping Stations • Key-Area Detailed Design

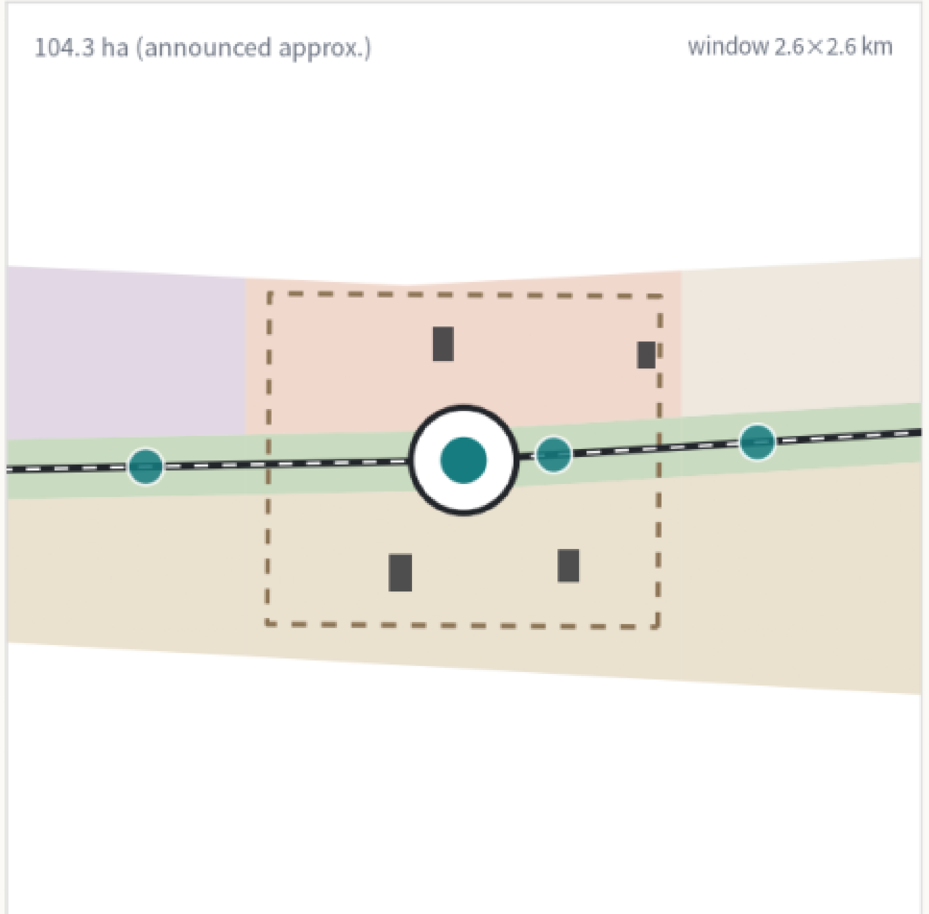
FIG-03 KEY AREAS

benchmark → pass → public record: three stations form one non-interchangeable timekeeping chain

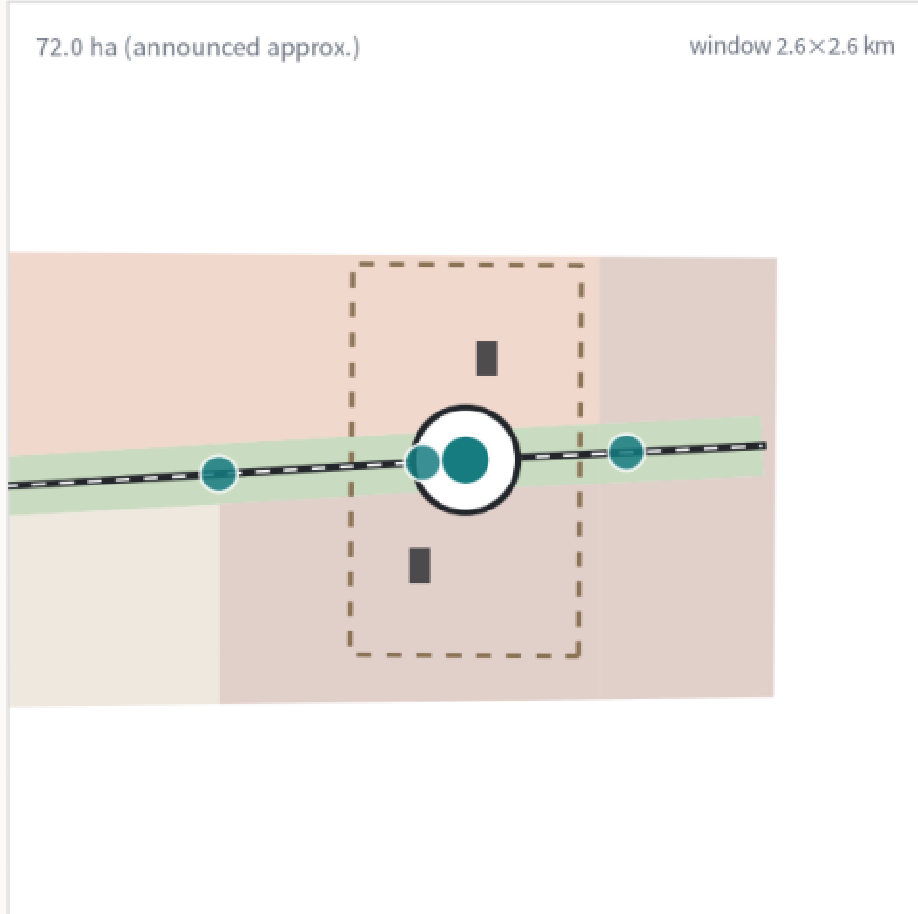
Benchmark Station • Zhongzhiyuan



Calibration Station • AI Origin



Time-Telling Station • Dazhongsi



maintains human baselines → produces "benchmark"

SCN 01-03: benchmark review, device test bench, degrade drill

organises open calibration → produces "pass"

SCN 04-06: baseline co-build, open-source launch hall, companion svc.

publishes service status → produces "public record"

SCN 08-12: health/legal desks, experience street, ledger wall, gallery

Industry test scenario | Public service scenario | Concept interface volume | Key area (provisional)

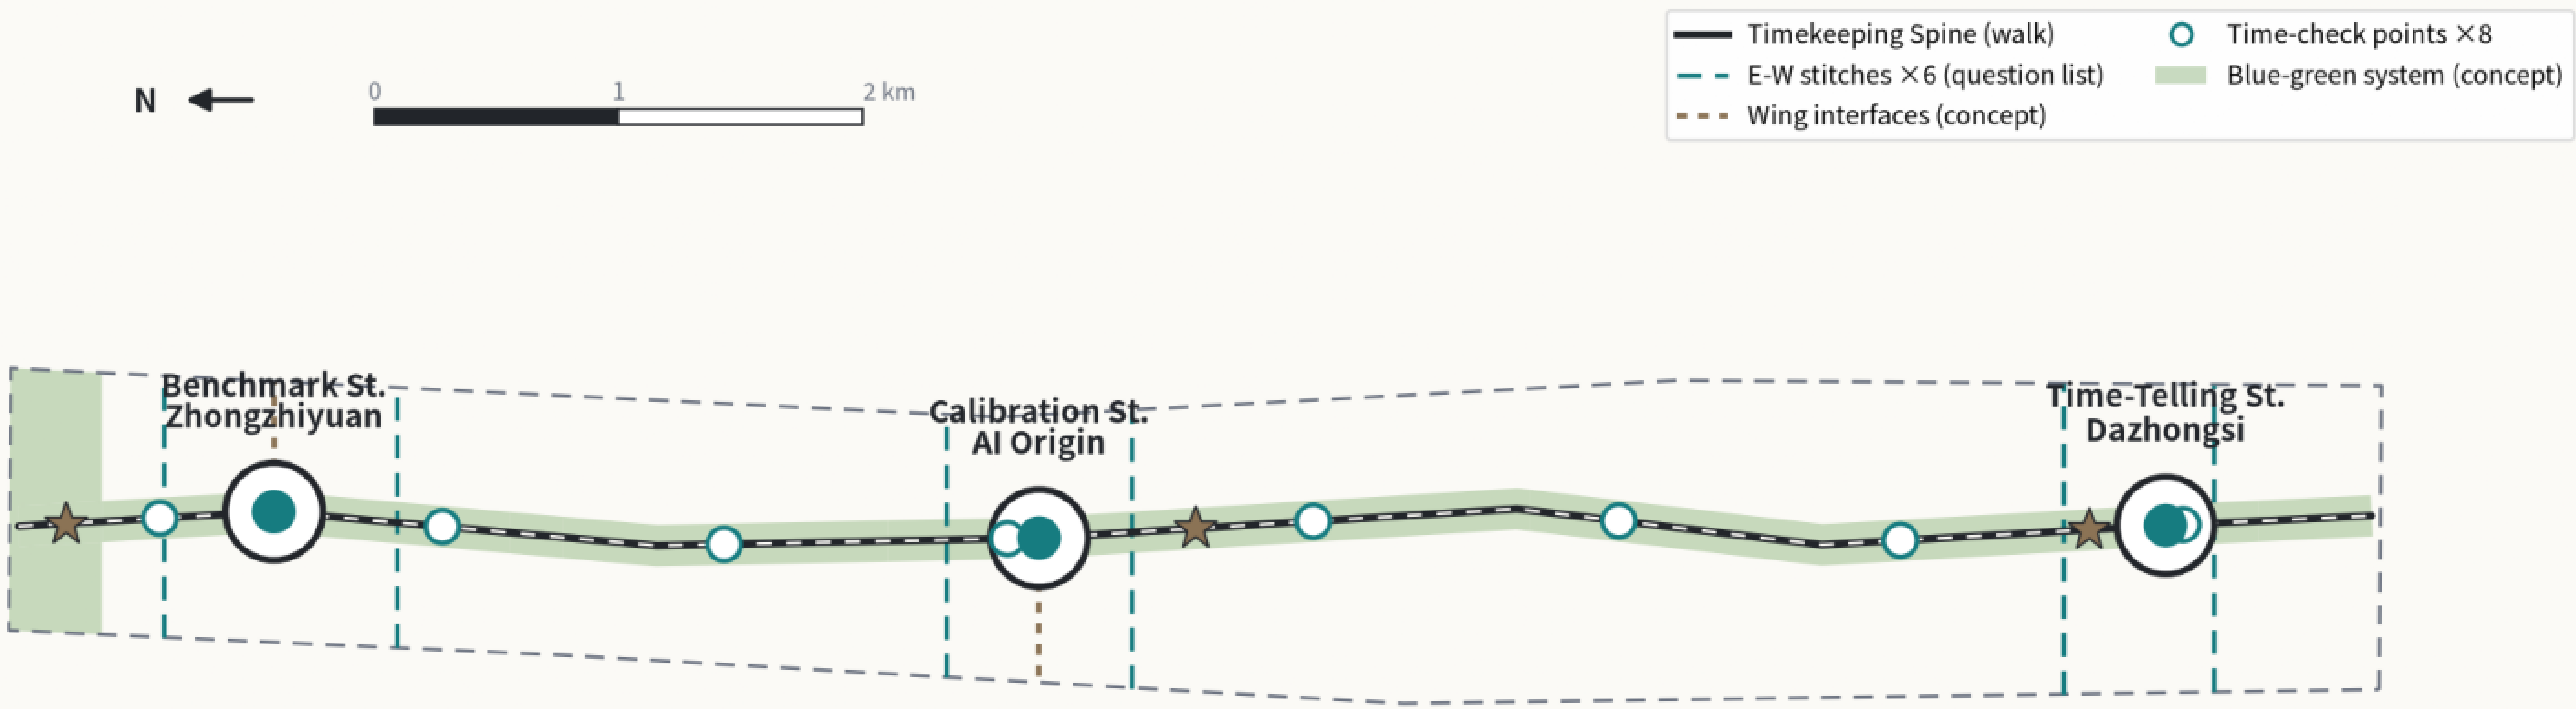
All geometry uses a provisional rough boundary for concept illustration only — not an official redline or precise-area basis; full recalculation once official polygons arrive. Drawn deterministically from package GeoJSON + metrics.json | Conceptual proposal, not statutory p

Fig.04 Mobility & blue-green

Slow-Mobility Network, Blue-Green System & Time-Check Points

FIG-04 MOBILITY

One spine, six stitches, two wings • centrelines total 17,691.6 m • principles and data gates only — no traffic sizing claims



Spine cross-section = six component families (concept) • smart kit never occupies the accessible clearway • service floor: Barrier-Free Environment Law Art. 39

Rail-memory band	Continuous accessible path	Shade & rain band	Paper timetable board	Removable time-check kit	Staffed service point

All geometry uses a provisional rough boundary for concept illustration only — not an official redline or precise-area basis; full recalculation once official polygons arrive. Drawn deterministically from package GeoJSON + metrics.json | Conceptual proposal, not statutory p

FIG-05 EVIDENCE

Core Metrics, Evidence Chain & Time Check Protocol

Narrative, layers, metrics and drawings cross-verify • three drill suites 12/12, byte-reproducible

Provisional site **11,412,825 m²** vs announced +0.11%	Land-use coverage **1.000000** 28 parcels seamless
Concept green **17.44%** not statutory	Spine **9,667 m** concept alignment
Scenario nodes **12** incl. 3 industry tests	Fields / gates **12 / 6** incl. version & probes
FAR • height • density **awaiting official** never back-derived	Landmarks / points **3 / 8** concept nodes

Evidence chain
