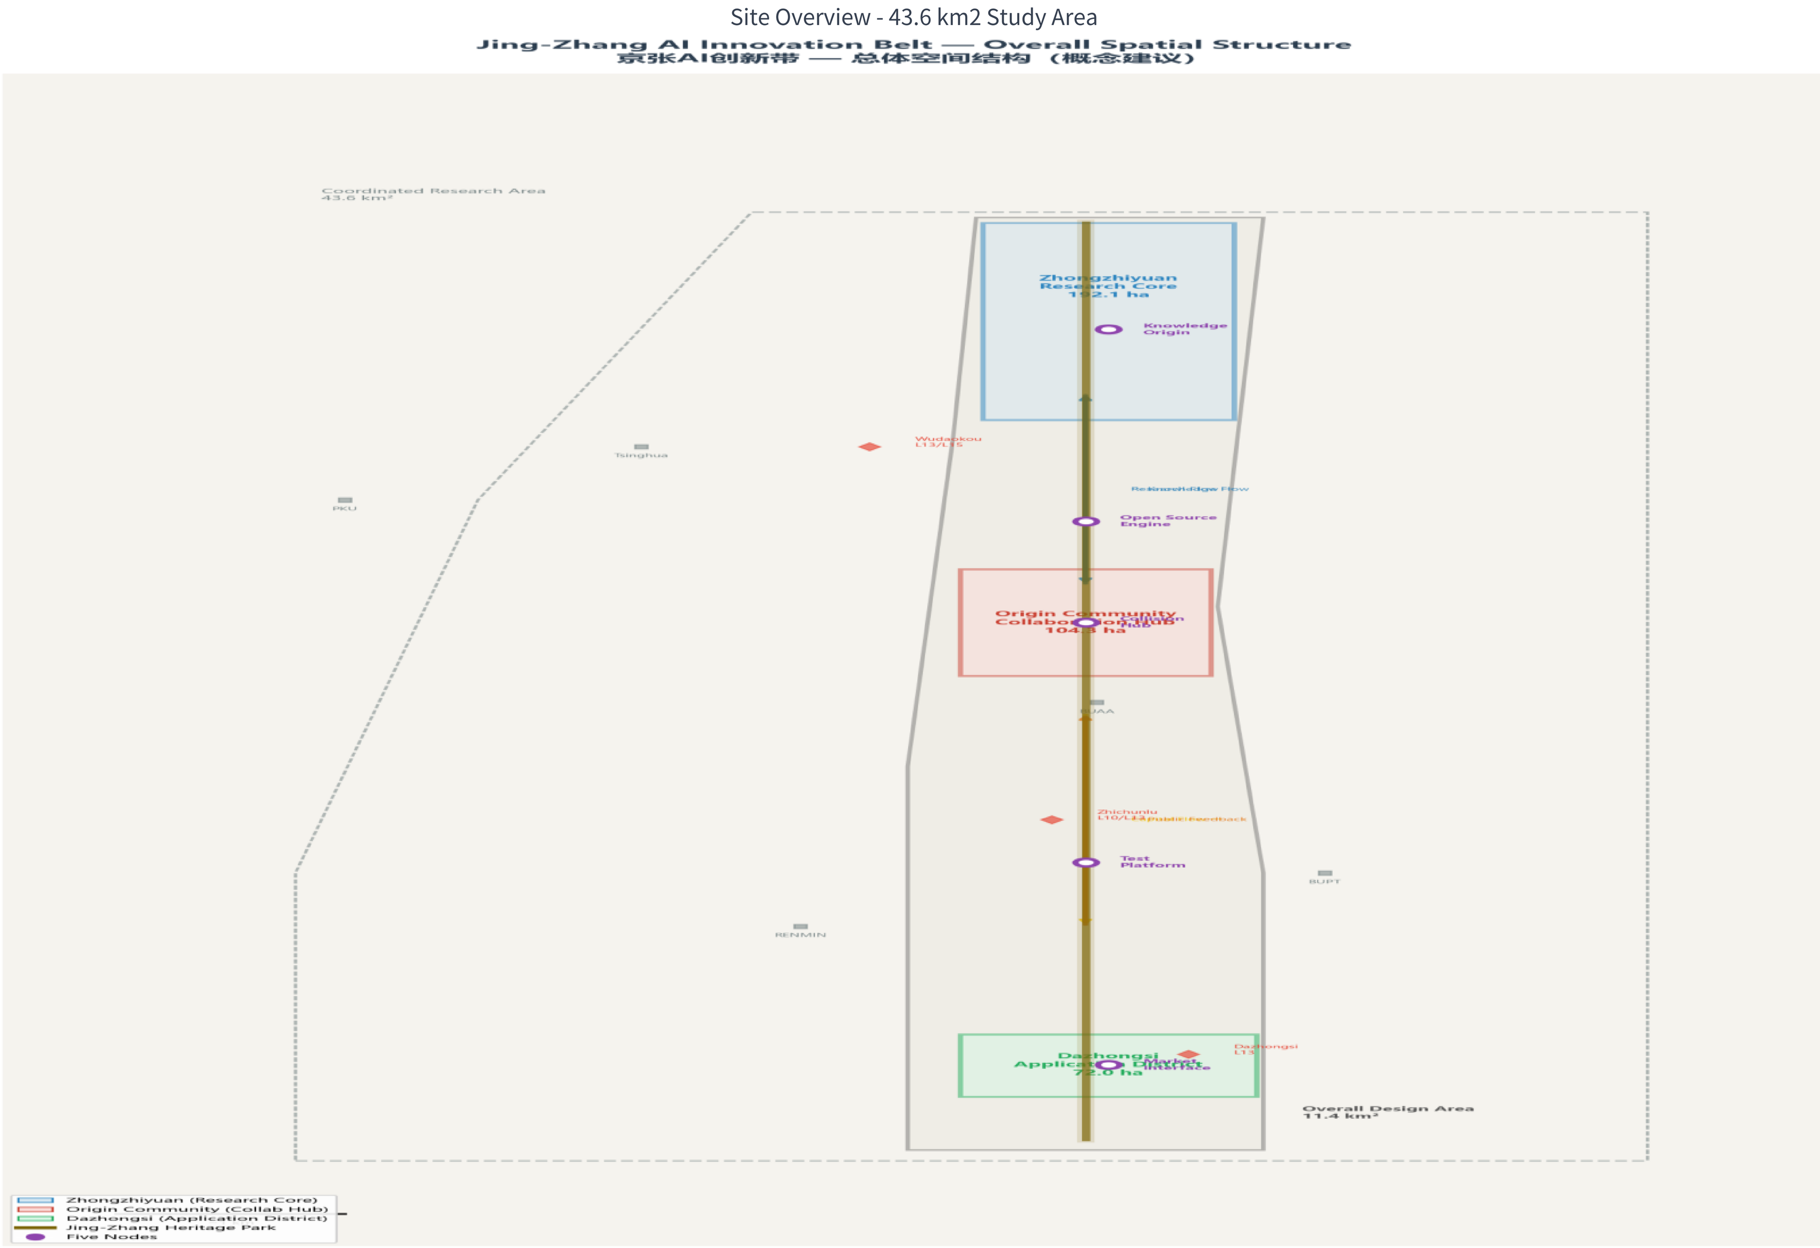
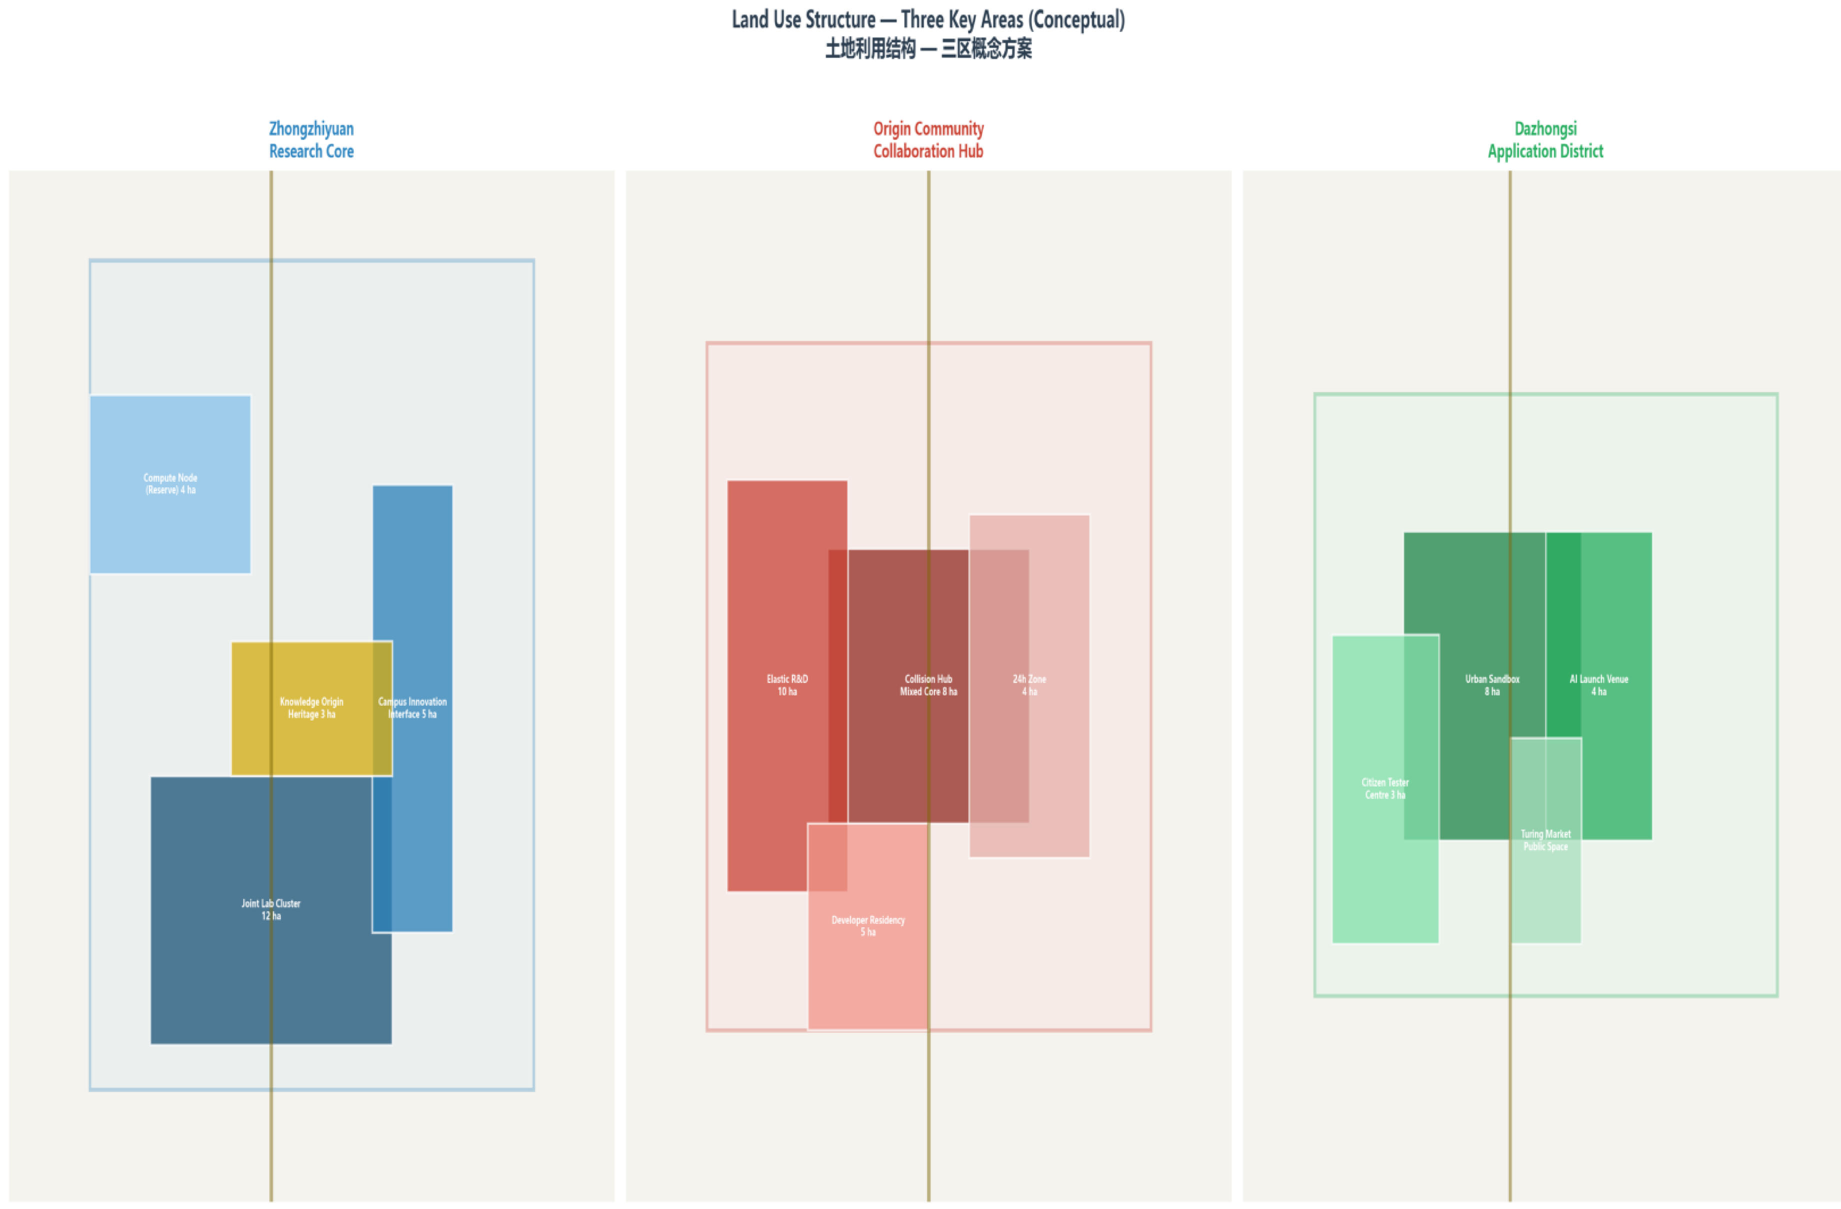
The Jing-Zhang Loop - Jing-Zhang AI Innovation Belt Urban Design

Board 1: Spatial Structure - One Axis, Three Districts, Five Nodes

Site Overview - 43.6 km2 Study Area



Land Use Structure - Three Density Nodes



KEY FACTS

43.6 km2 coordinated research area / 11.4 km2 overall design area / 368.4 ha key three districts

One Axis: Jing-Zhang Heritage Park - Developer Corridor (~8.7 km linear public space spine)

Three Districts: Zhongzhi Park (Research Core, 192.1 ha) / AI Origin Community (Collaboration Hub, 104.3 ha) / Dazhongsi (Application District, 72.0 ha)

Five Nodes: Knowledge Origin / Open Source Engine / Collision Hub / Experimental Platform / Market Interface

The Loop Framework: Innovation Loop (AI innovation 6-stage cycle) -> Spatial Loop (spatial organization) -> Infrastructure Loop (5 sub-cycles for continuous operation)

All spatial boundaries = provisional bbox. All metrics = Innovation Capacity (not Planning Requirement). Planning controls: all 5 items missing.

Proposal: proposal.md (ZH) / proposal.en.md (EN) | Matrices: 10 JSON | GeoJSON: 9 layers | Diagrams: 6 PNG

The Jing-Zhang Loop - Jing-Zhang AI Innovation Belt Urban Design

Board 2: Innovation System - Flows, Infrastructure, Implementation

Zhongzhi Park - Research Core

+ Boundary Interface Model (3-layer)
+ Innovation Showcase (1-2 km)
+ Joint Lab Cluster (3-5 buildings)
+ Shared Computing (2-4 ha, long-term)

AI Origin Community - Collaboration Hub

+ Collision Hub (8 ha, 2000-seat conference)
+ Elastic R&D Zone (10 ha, modular)
+ 24h Zone (Global AI Collaboration Infra)
+ Developer Residency (4-tier, 200-400 beds)

Dazhongsi - Application District

+ Citizen AI Participation (4-layer model)
+ Urban Sandbox (8 ha, Tier 1/2/3)
+ AI Product Launch Hall (4,000-8,000 m2)
+ Citizen Tester Center + Turing Market

INNOVATION FLOW SPATIAL SUPPORT SYSTEM

Knowledge Flow (bidirectional) / Talent Flow (multi-directional) / Data Flow (S->N) / Capital Flow (N->S) / Public Feedback Flow (S->N)
