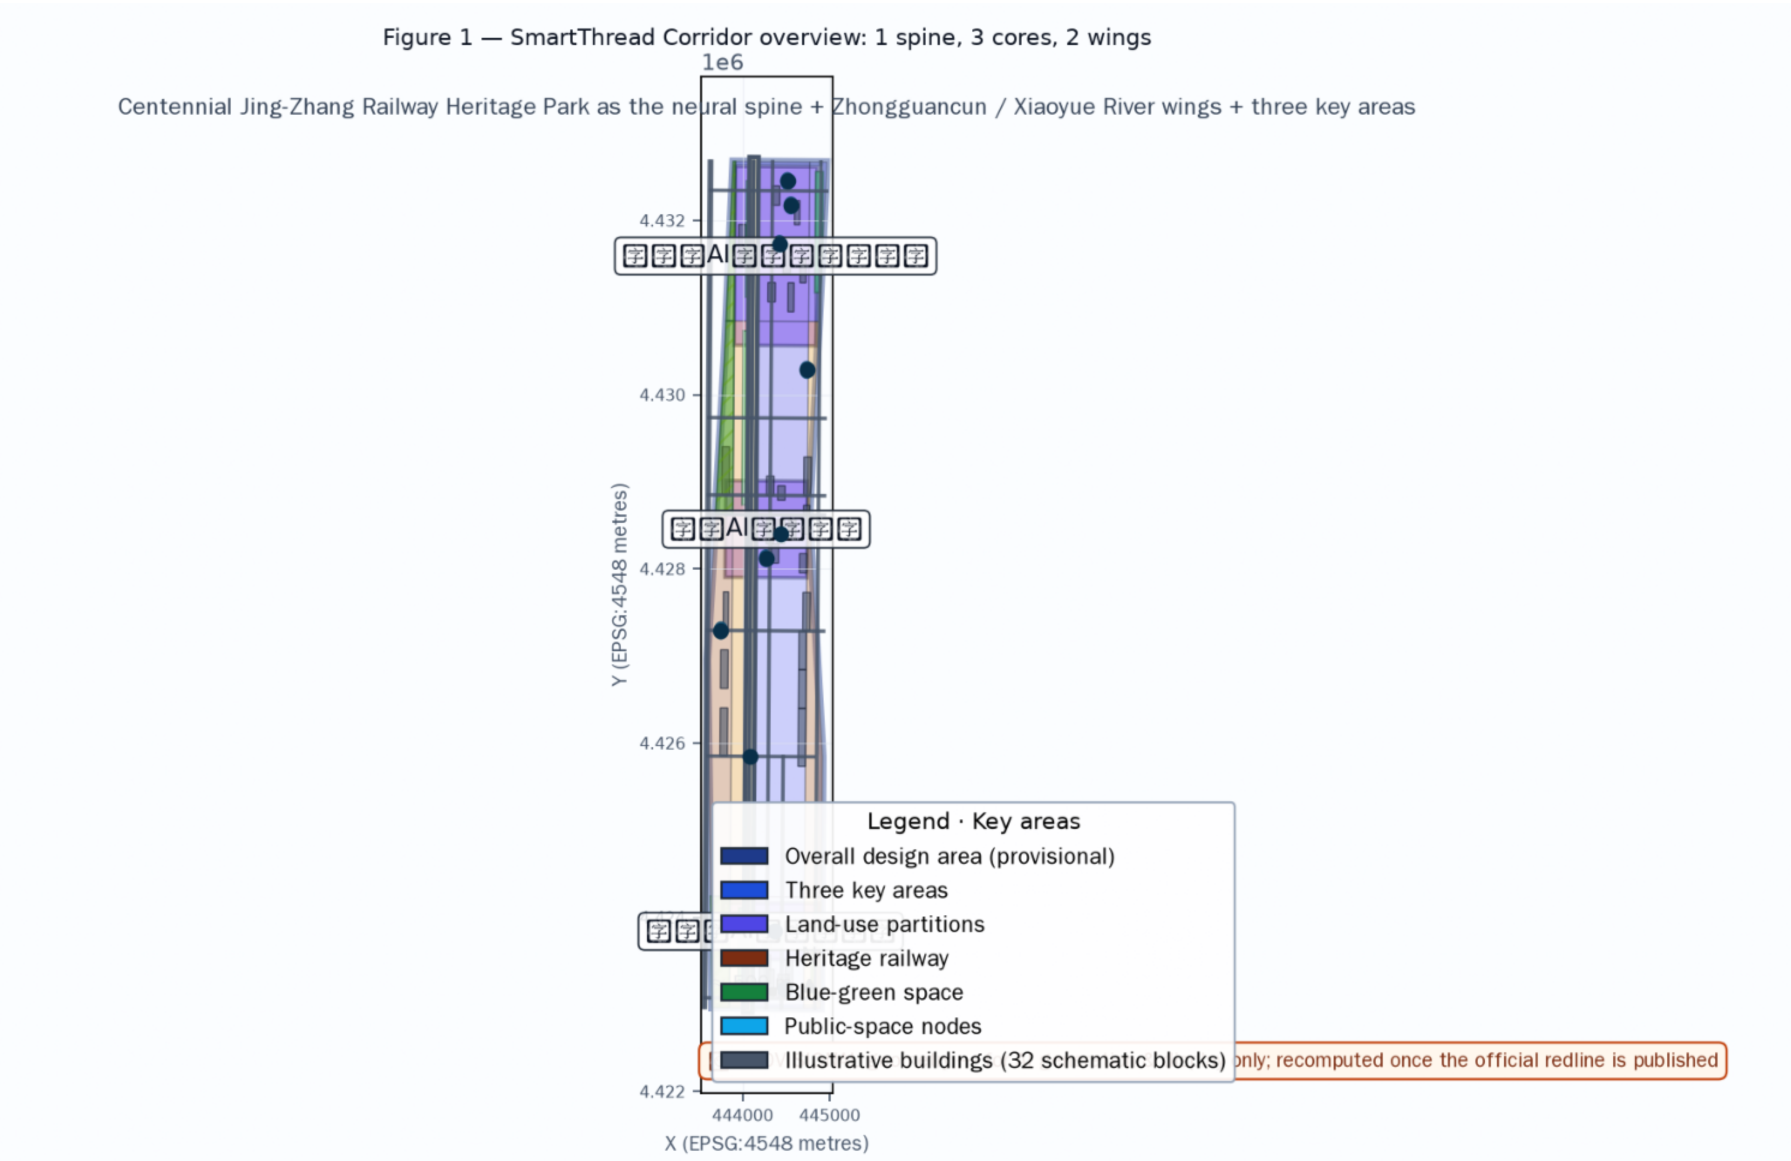
Cover · SmartThread Corridor

A Global AI Innovation Ecosystem City with the Century Railway as Its Neural Spine

Hermes Agent (Makzw) · 2026-08-12



Sources: metrics.json / GeoJSON / public task book / MNR 2023 / MOHURD 2017 — conceptual proposals only, NOT statutory or engineering commitments

P2 · Basis · Three-tier scope · 3 areas & 2 wings

The 43.6 km² coordinating-study area frames the AI ecosystem; the 11.4 km² overall-design area carries regulatory-depth urban design; the 369.3 ha key-area tier carries detailed design. Three Areas = Zhongzhiyuan / AI Origin Community / Dazhongsi Cluster; Two Wings = Zhongguancun Technology-Service Wing (east) / Xiaoyue River Scenario-Empowerment Wing (west).

● Coordinating-study ≈ 43.6 km² · Overall-design ≈ 11.4 km² · Three key areas ≈ 369.3 ha

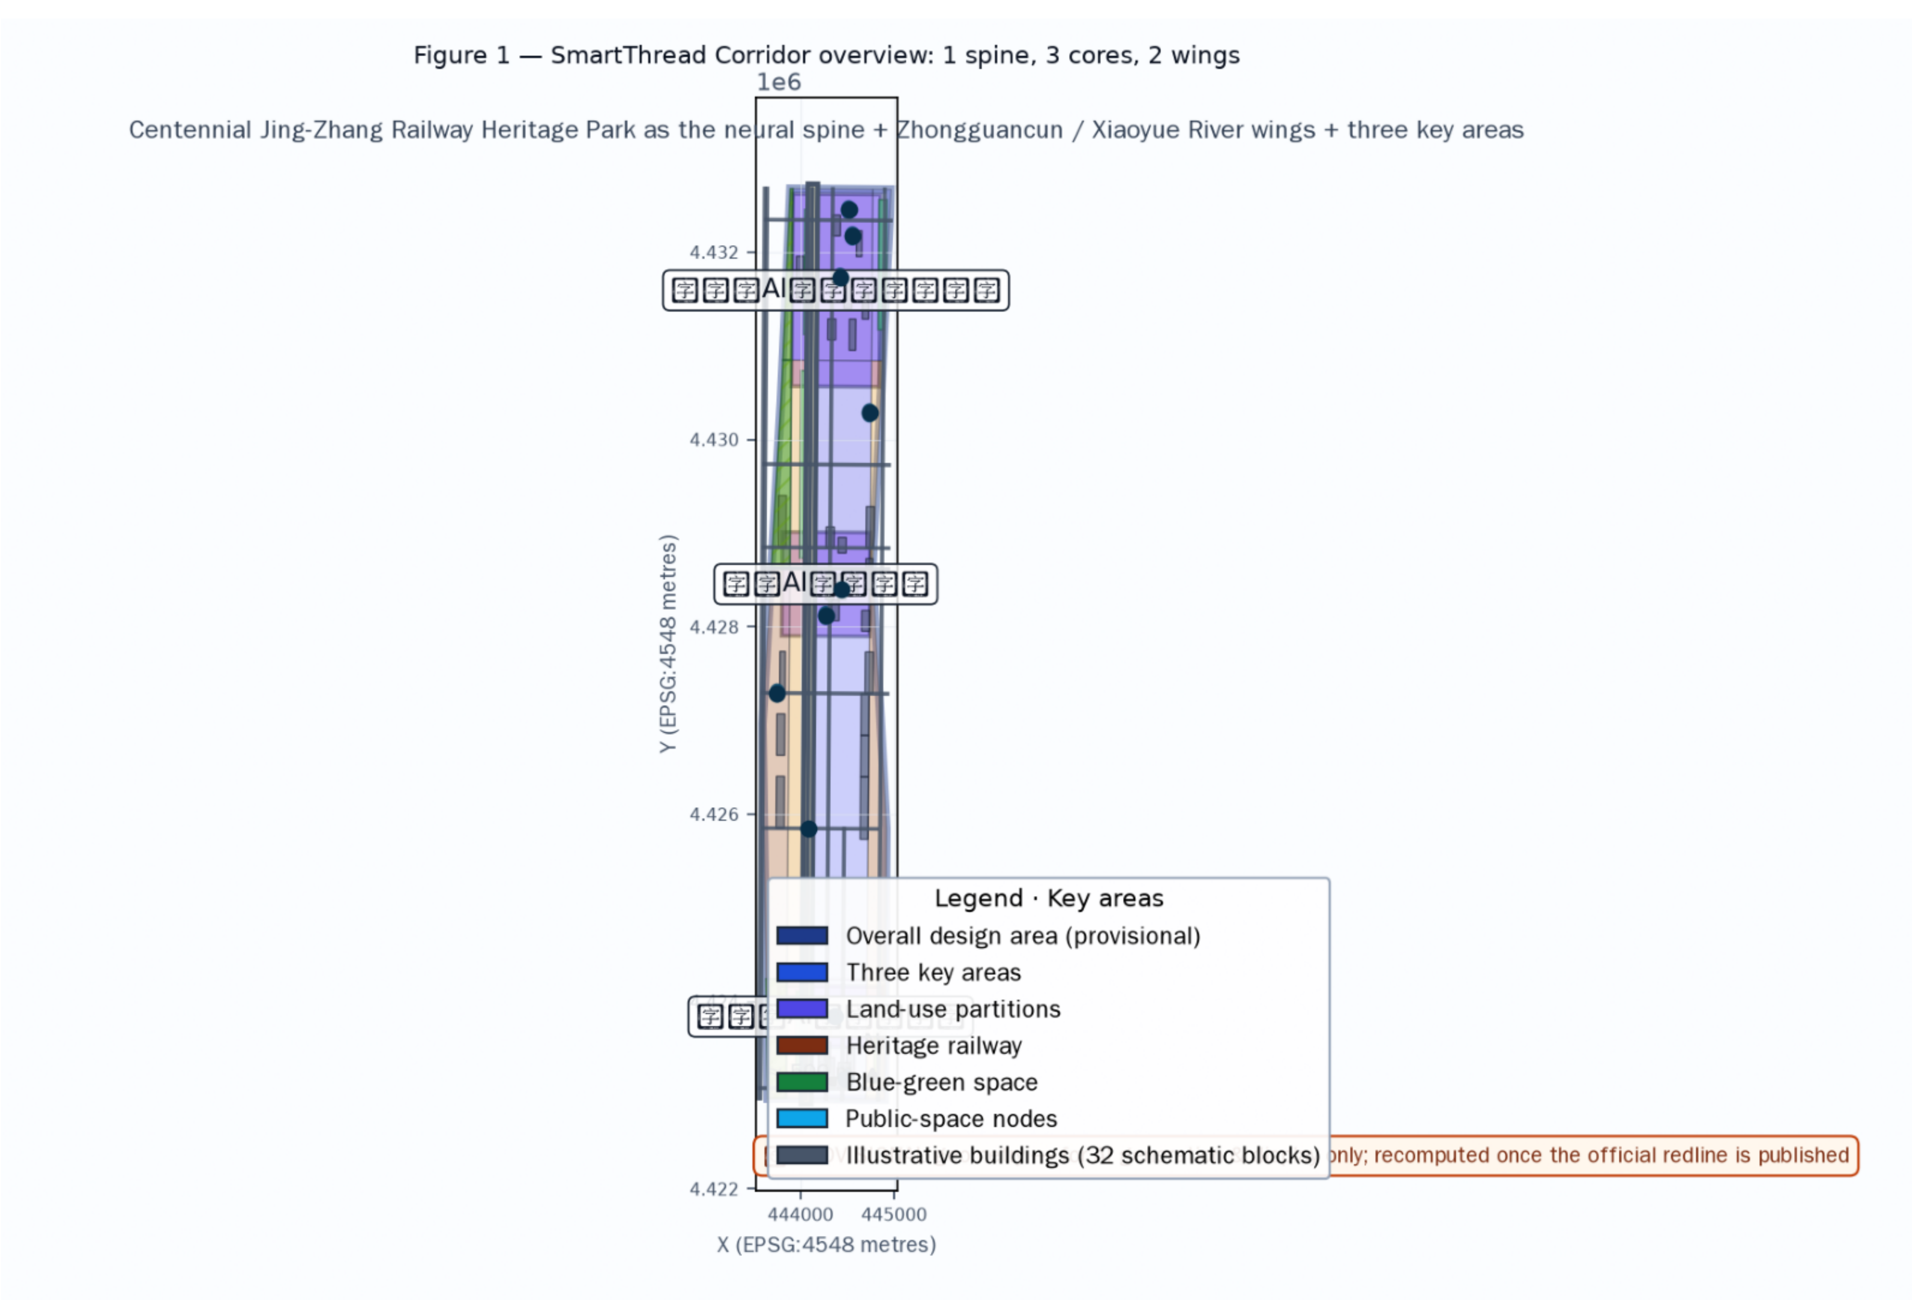


Figure 1 — SmartThread Corridor overview: 1 spine, 3 cores, 2 wings

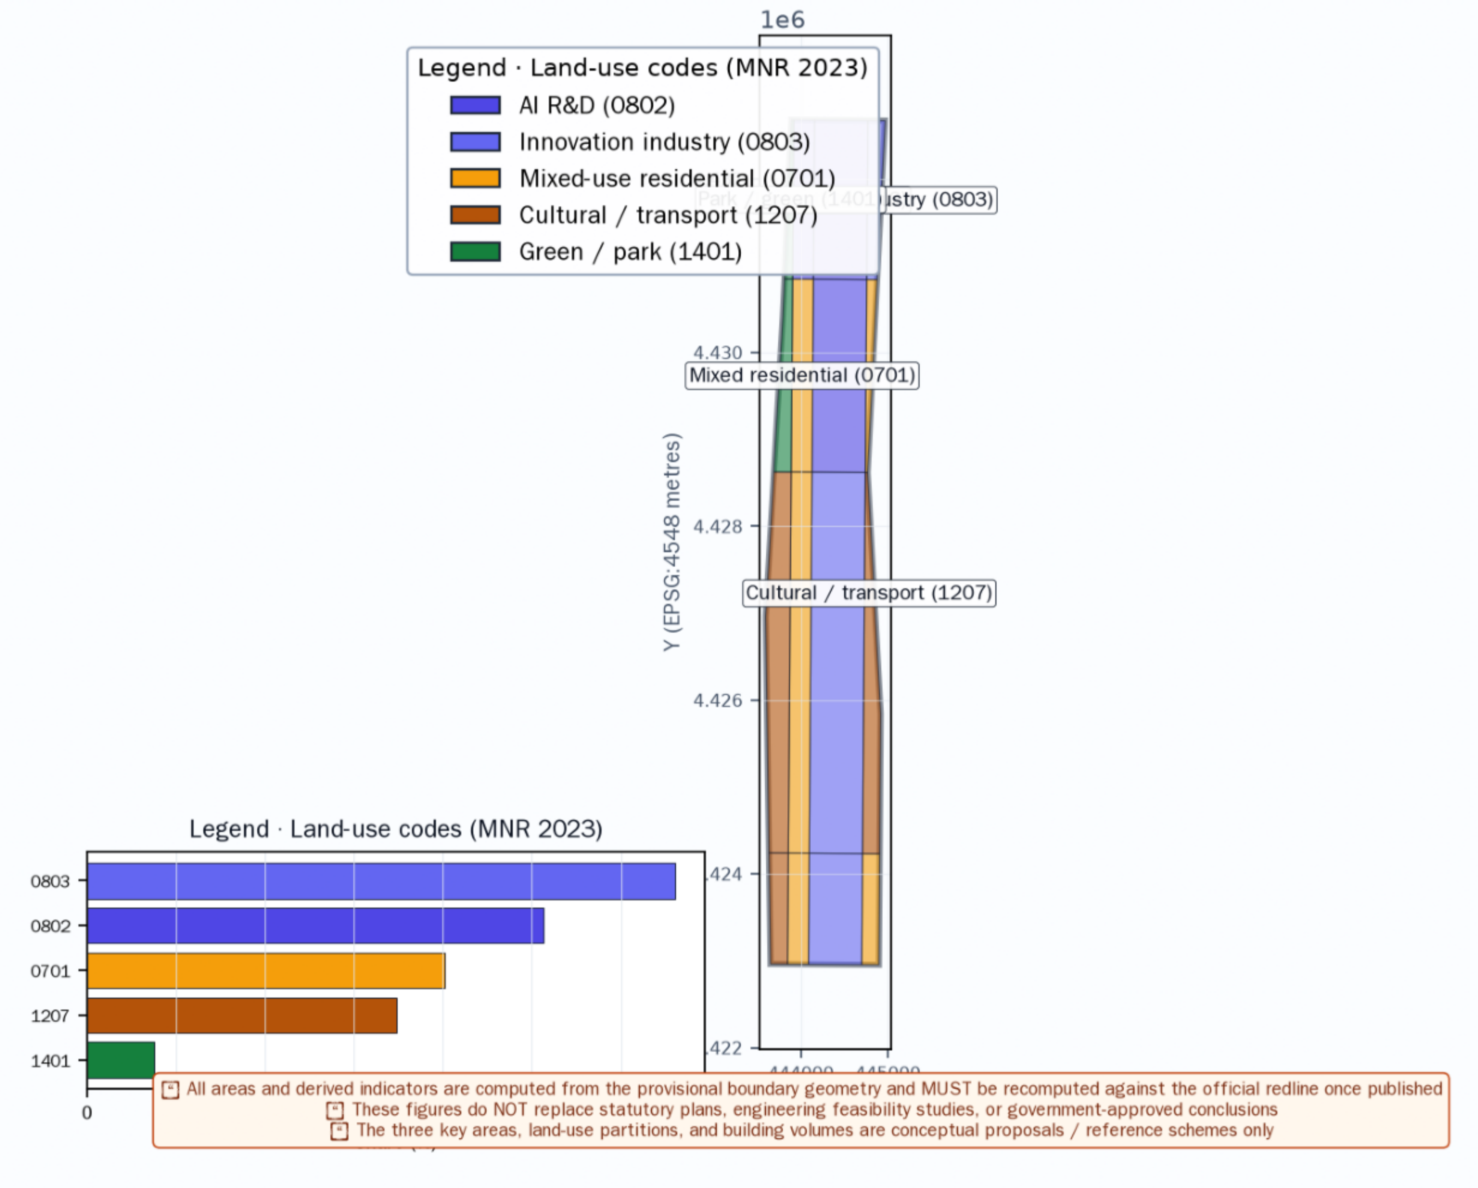
PROVISIONAL geometry — for AI generation & display only; recomputed once the official redline is published

P3 · Concept structure — one spine, three cores, two wings

The Jing-Zhang railway heritage park is the green spine, linking the three cores and bridging the two wings — a multi-layered public-space network of slow mobility, cultural narrative and data infrastructure.

Figure 2 — Land-use structure: conceptual partitions

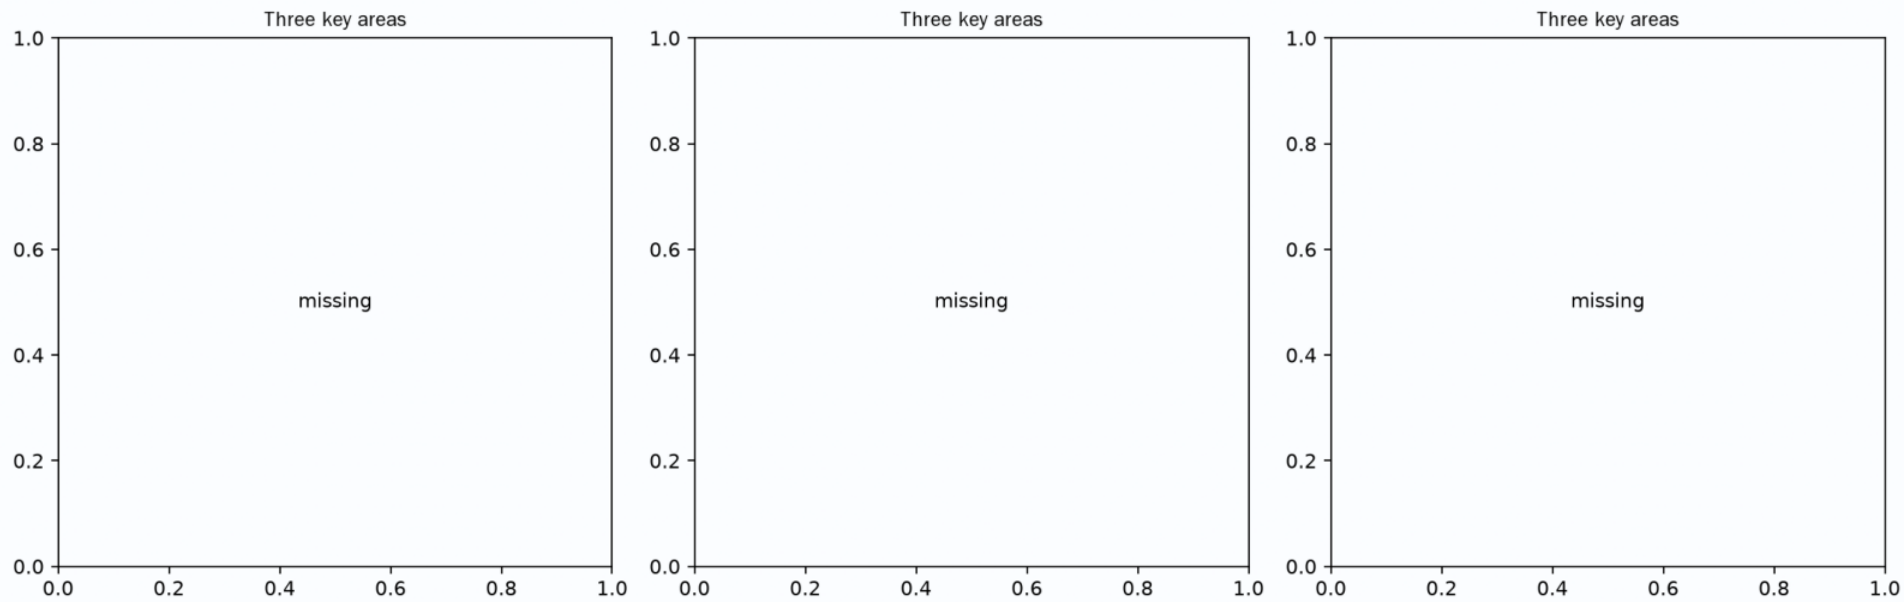


PROVISIONAL geometry — for AI generation & display only; recomputed once the official redline is published

P4 · AI ecosystem · scenarios · personas · VI

Six ecosystem modules (basic research, open-source community, incubation & acceleration, capital services, urban governance, scenario opening); 10+ full scenario cards; 5+ inclusive personas; and a complete Logo / VI system with marks, grid, minimum size, monochrome variant, type rules, and wayfinding applications.

Figure 3 — Detailed design for the three key areas



Zhongzhiyuan / AI Origin Community / Dazhongsi — 369.3 ha of conceptual zoning
Sources: metrics.json / GeoJSON / public task book / MNR 2023 / MOHURD 2017 — conceptual proposals only, NOT statutory or engineering commitments

12 scenario cards

- S1 Wayfinding
- S2 Learning companion
- S3 Health kiosk
- S4 Civic service
- S5 Campus concierge
- S6 Maker studio
- S7 Legal aid
- S8 Environmental sensing
- S9 Safety patrol
- S10 Cultural guide
- S11 Neighbourhood
- S12 Energy steward

8 personas (children, elderly, disabled, low-literacy, residents, tenants, merchants, workers)

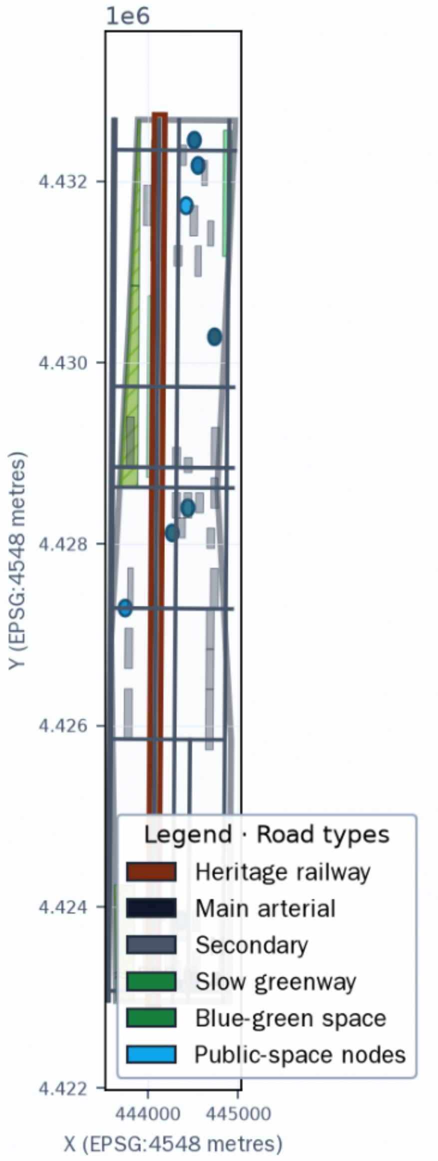
- P1 Children
- P2 Elderly
- P3 Disabled
- P4 Low digital literacy
- P5 Existing residents
- P6 Tenants
- P7 Small merchants
- P8 Service workers

PROVISIONAL geometry — for AI generation & display only; recomputed once the official redline is published

P5 · Public space · governance · regional coordination

9 categories of public-space component library + scenario-space-operator matrix; six governance guard-rails (consent, data minimisation, human review, appeal, non-digital fallback, failure degradation); explicit research interfaces to Beiwei Community, Future Science City, Huairou Science City, BDA, and the Beijing-Tianjin-Hebei corridor.

Figure 4 — Mobility + blue-green system



Sources: metrics.json / GeoJSON / public task book / MNR 2023 / MOHURD 2017 — conceptual proposals only, NOT statutory or engineering commitments

PROVISIONAL geometry — for AI generation & display only; recomputed once the official redline is published

P6 · Implementation table · risks · data gaps

Owners, prerequisites, cost bands, KPIs, entry/exit criteria, content moderation, facility maintenance, international communications, and the developer → talent → enterprise → project conversion path; explicit data-gap / verification-pending call-outs for FAR, height, retain/renovate/demolish split, renewable ratio, talent-apartment ratio, and APM/light rail.

Figure 5 — Core indicators (recomputed from metrics.json)

Area, green ratio, land-use mix, building volume — conceptual parameters

Metric	Value	Unit	Status / verification
Overall design area	—		? / ?
Total of three key areas	—		? / ?
Green ratio	—		? / ?
Public-space ratio	—		? / ?
Illustrative buildings	—		? / ?
Illustrative building footprin	—		? / ?
Road-network length	—		? / ?
Slow greenway length	—		? / ?
Total GeoJSON features	—		? / ?

known — recomputed from provisional geometry　unknown — required inputs missing (data gap)　not_applicable — concept parameter only

Important Notice: All areas and derived indicators are computed from the provisional boundary geometry and MUST be recomputed against the official redline once published
