

Overall Design Overview: One Loop, Three Nodes & Lighting Tiers (provisional geometry)

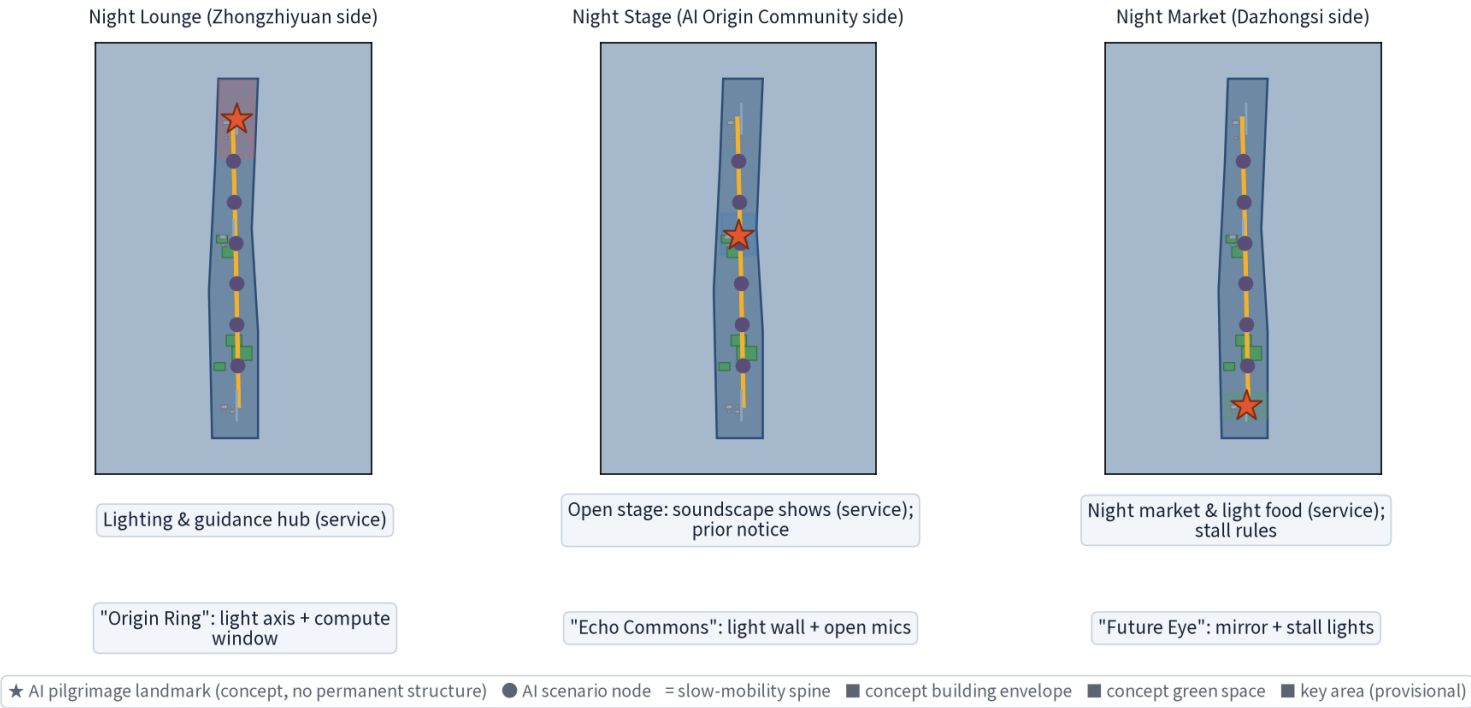

The Night Loop follows the Jingzhang heritage park belt, linking Night Lounge - Night Stage - Night Market; lighting tiered gateway - path - node - dark zone, with dark-sky friendly zones around green edges

Source: this package geometry/" .geojson (participant provisional model data); area caliber EPSG:4548; displayed values rounded.

Provisional concept boundary; not an official redline; recompute after official data release

Key-Area Detailed Design: Functional Night Nodes x AI Pilgrimage Landmarks (provisional geometry)

Source: this package geometry/" .geojson (participant provisional model data); area caliber EPSG:4548; displayed values rounded.

Provisional concept boundary; not an official redline; recompute after official data release

Three Formal Core Metrics - Evidence (Provisional Geometry; Rounded Display)

Formula and trigger: recompute the full set with the same formulas after official boundary/data release; no placeholders are substituted.

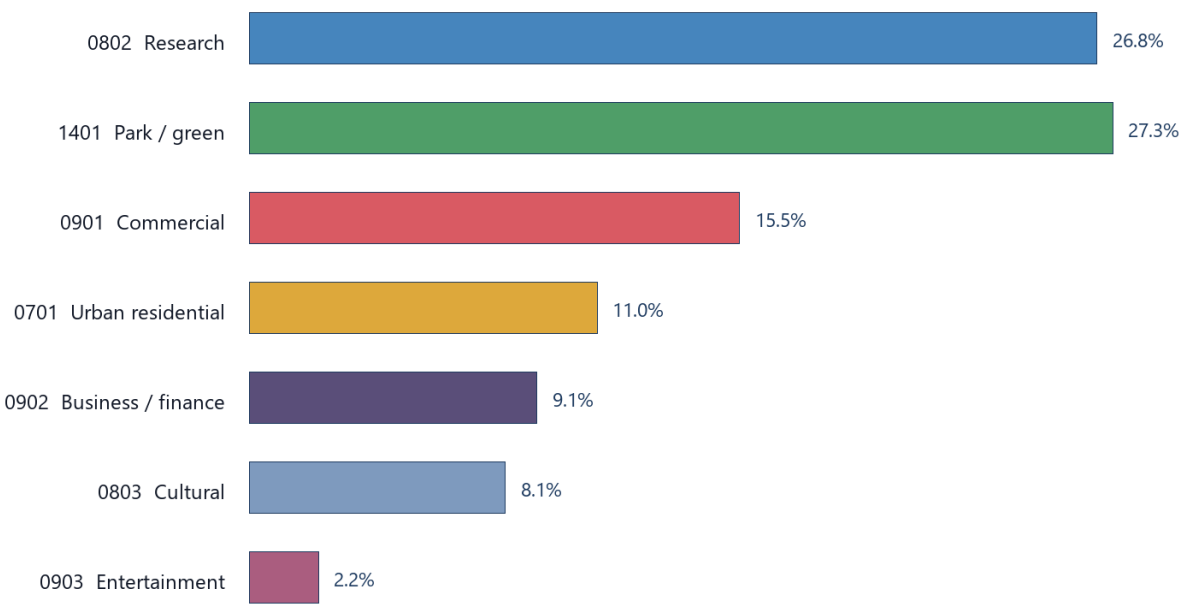

Note: all three metrics are participant provisional model data, not authoritative or official values; full machine values live only in metrics.json and visual data-value attributes.

Source: this package geometry/" .geojson (participant provisional model data); area caliber EPSG:4548; displayed values rounded.

Provisional concept boundary; not an official redline; recompute after official data release

Concept Land-use Structure - One Caliber: 7 Codes = 100.0%

Aggregation: projected block area by land_use_code / site area; EPSG:4548. 1401 ≈ 27.3%; no unclassified or residual other bucket.

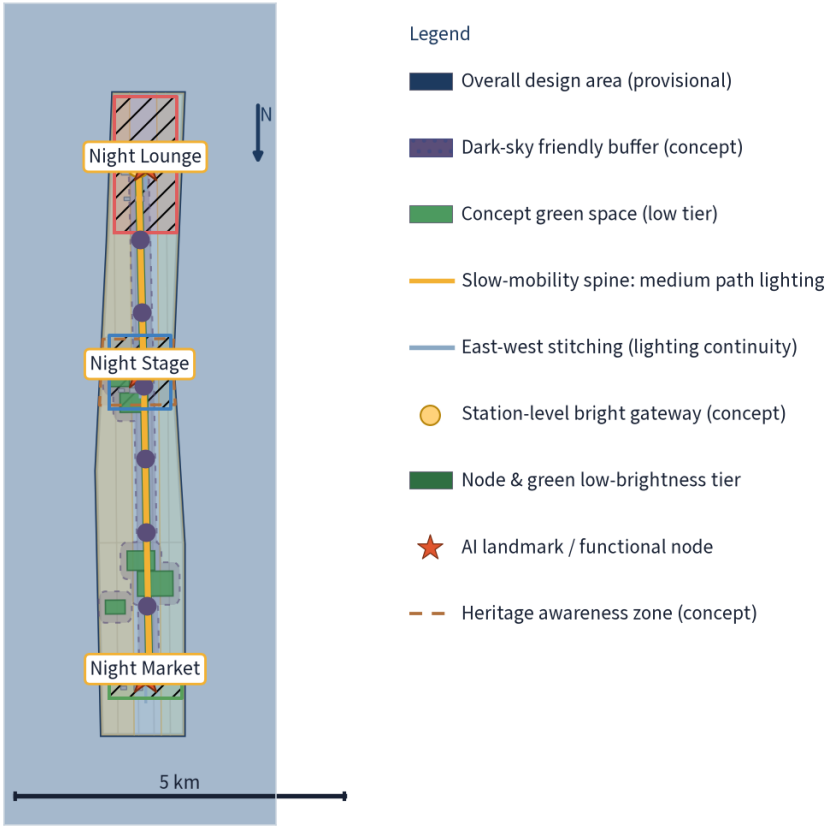

Seven codes exhaust geometry/land_use.geojson; green_ratio ≈ 11.0% is a separate concept greenline caliber.

Provisional concept boundary; not an official redline; recompute after official data release

Slow Mobility & Blue-Green Analysis: Lighting Tiers and Dark-Sky Friendly Zones (provisional geometry)

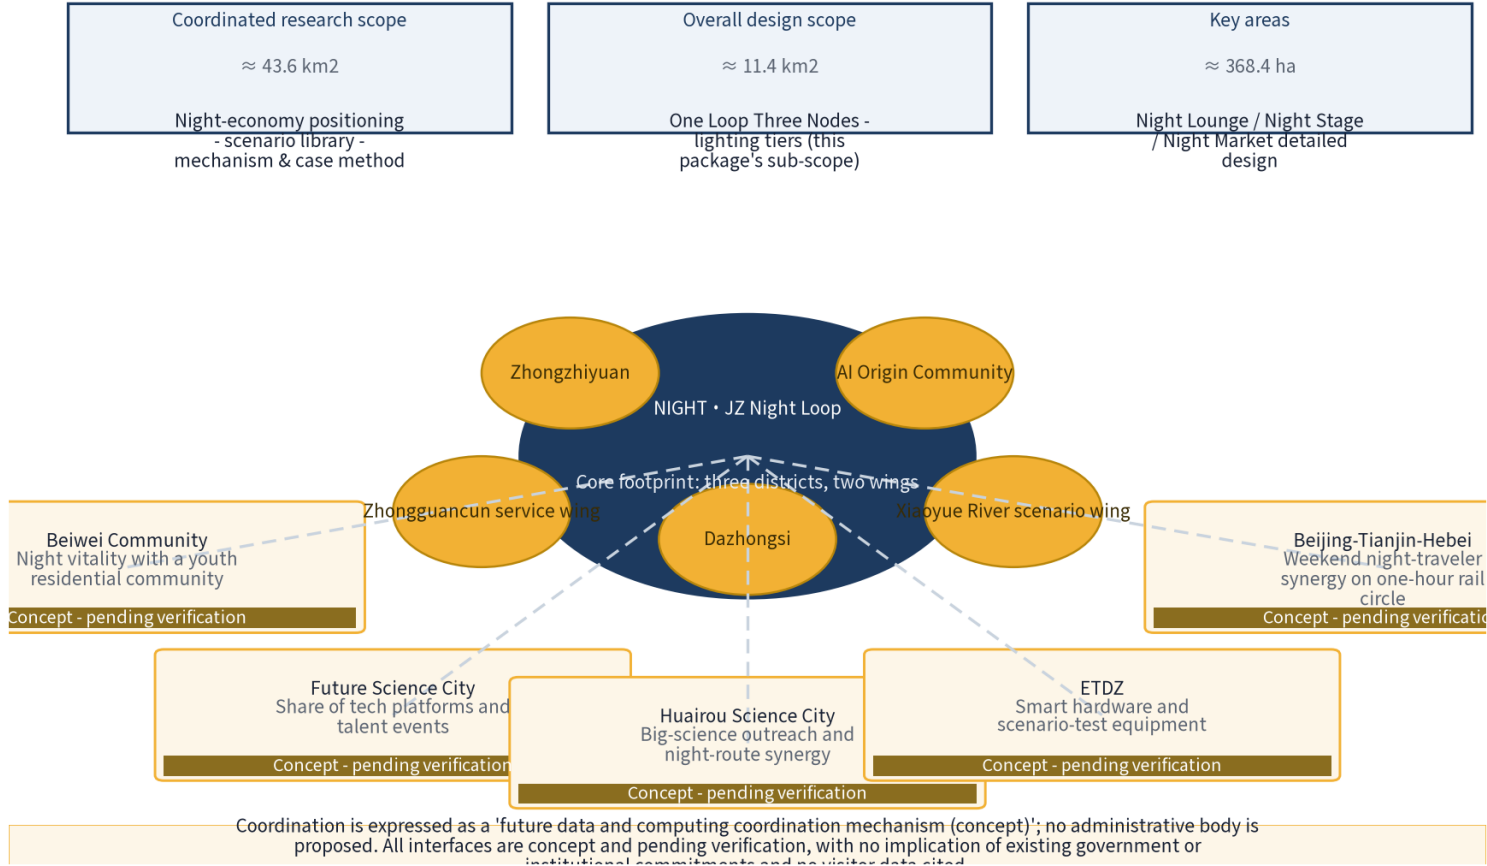

Integrated night-return lighting (gateway - path - node - dark zone); dark-sky friendly low tiers and spill-light control around green/water edges; night lighting avoids green core sensitive zones

Source: this package geometry/*_geojson (participant provisional model data); area caliber EPSG:4548; displayed values rounded.

Provisional concept boundary; not an official redline; recompute after official data release

Three-Tier Scope & Regional Cooperation Interfaces (concept, not existing arrangements)

Source: this package geometry/*_geojson (participant provisional model data); area caliber EPSG:4548; displayed values rounded.

Provisional concept boundary; not an official redline; recompute after official data release

Global AI Innovation Ecosystem Benchmarks & the Eight-Element Mechanism: Land - Space - Industry - Capital - Talent - Compute - Data - Scenario
Cases borrow mechanisms only (public-channel overviews registered case-by-case in sources.json); all element mechanisms are concept suggestions

Silicon Valley (Stanford Park) Adjacent university-VC-industry loop Mapping: Zhongzhiyuan (R&D)	Shenzhen Nanshan Fast prototyping + supply-chain density Mapping: Dazhongsi-ETDZ	Singapore one-north Single-operator science city + city AI tests Mapping: AI Origin Community
Hangzhou cloud city City-scale open AI scenario trials Mapping: Xiaoyue River wing	Boston Kendall Square Research cluster + compact night life Mapping: AI Origin Community	Tel Aviv start-up nation Multi-actor incubation, risk-tolerant Mapping: Zhongguancun wing

Eight-element mechanism chain (concept): how elements land in the three districts / two wings and trigger recomputation

Placement & recomputation: Land/Space -> geometry layers (provisional, recomputed after official release); Industry/Scenario -> ten scenario cards and three test protocols; Capital -> qualitative cost tiers; Talent -> six personas and developer partner plan (concept); Compute -> reversible machine-room interfaces (no capacity conclusions); Data -> anonymised aggregation and annual disclosure rules.

Source: this package geometry/*_geojson (participant provisional model data); area caliber EPSG:4548; displayed values rounded.

Provisional concept boundary; not an official redline; recompute after official data release

Functional Night Nodes x AI Pilgrimage Landmarks - Honor Display System - Reversible Public-Space Component Library (concept)

Functional nodes vs pilgrimage landmarks	Honor display system	Reversible component library (8 types)
Night Lounge Station lighting-tier and night-guidance hub (service) Landmark: Origin Ring - light axis + compute window	* Open-Source Co-creation Medal Developers contributing night code, corpus or tests	Tiered lighting sets Spatial: Path / node / sensitive zone
Night Stage Time-based soundscape shows and event stage (service) Landmark: Echo Commons - contribution wall + open-mic steps	* Community Co-building Medal Residents contributing consultation, duty and feedback	Light-curtain gateways Spatial: Node entry interfaces
Night Market Reversible stall market and light food (service) Landmark: Future Eye - Scenario Mirror - data mirror + stall light matrix	* Market Reputation Medal Stallholder credit summary and operation review (anonymous aggregate)	Reversible stage kit Spatial: Night Stage
Differentiation: functional nodes deliver daily service (permits, soundscape, sanitation and guidance); landmarks carry AI cultural narrative and ritual interfaces. All are concept installations with no permanent structures.	Display surfaces: tiered-brightness node screens, annual disclosure and removable honor boards; privacy or objection events remove the display.	Stall kits Spatial: Night Market
	Rules (honest boundary): honors carry no cash reward, permit privilege or stall priority; opt-out is always available; honor points are anonymous aggregates published after human review.	Info-screen units Spatial: Lounge / disclosure
		Mobile seating & shared tables Spatial: Three-node viewing and rest
		Reversible utility & waste points Spatial: Market back-of-house
		Signage & help-point frames Spatial: Along the Night Loop

Operational mapping: each component registers a permit, withdrawal window (within 48 h) and responsible maintainer; after events, inventory is checked and no fixed construction remains.
