

JING-ZHANG SECOND SHIFT

Designed for night workers, late returners and city maintainers

safe route | warm food | no-purchase rest | clear handover | human takeover | low-disturbance validation

Conceptual recommendation using provisional rough geometry; not statutory planning, official siting, construction commitment or field performance.

Overview: who maintains the city at night

JING-ZHANG SECOND SHIFT: who maintains the city at night

Three stations + a reliable route home + low-disturbance validation; provisional geometry

01 / OVERVIEW

Pale dash = provisional rough boundary, not an official redline

ONE SENTENCE

Give night workers, late returners and maintainers a safe route, warm food, rest and a clear handover.

OVERALL AREA

11.413 km²

provisional recalculation

STATIONS

3

concept nodes, not built

PERSONAS × SCENARIOS

6 × 12

coverage, not performance

INDUSTRY TESTS

5

not authorised, not run

Three-level scope and structure

Three scales, without inventing another spine

Time and responsibility overlay the three task scales; land use is structural concept zoning

02 / STRUCTURE

FOUR CONCEPT ZONES

0802 R&D + shared testing
Shared edges, full cover; not statutory land use

1401 Green + low-disturbance open
Shared edges, full cover; not statutory land use

05 Industry + night-life services
Shared edges, full cover; not statutory land use

0702 Community + talent support
Shared edges, full cover; not statutory land use

THREE WORKING SCALES

43.6 km² partnership + shared facilities

11.4 km² three stations + route + eight projects

368.4 ha one station each, accountable delivery

Computational precision ≠ boundary precision. Official polygons trigger full recalculation of nine layers, metrics, figures, PDFs and HTML.

Three key areas

Three key areas: service, validation, responsibility

One concept station per area; official boundaries and field surveys determine location and scale

03 / KEY AREAS

01

ZHONGZHIYUAN

Midnight Signal Garden + Test Lane

shared tests | safety advice | Qinghe interface | human stop

no-purchase rest | phone-free | named contact | paper handover

provisional extent / concept siting

02

AI ORIGIN

Handover Hall + near-campus service

food/rest | flexible space | staffed help | night audit

no-purchase rest | phone-free | named contact | paper handover

provisional extent / concept siting

03

DAZHONGSI

Maintainers Archive + reliable interchange

rider loading | human help | team honour | links to verify

no-purchase rest | phone-free | named contact | paper handover

provisional extent / concept siting

Reliable route home and low disturbance

A reliable route home without full-journey tracking

Route, blue-green space, rest, handover and low-disturbance baselines share one evidence system

04 / MOBILITY

SIX ITEMS IN A NIGHT AUDIT

- 01 LEVEL CHANGES
- 02 BARRIERS + CROSSINGS
- 03 GLARE + LEGIBILITY
- 04 FINAL CONNECTION
- 05 STAFFED HELP
- 06 RIDER LOADING

WORKS WHEN THE DIGITAL LAYER IS OFF

fixed timetable | paper route | telephone | staffed desk | on-site stop

Measure light, glare, noise, heat and ecology first; do not worsen the nearest verified sensitive receptor.

Evidence states and stop conditions

Do not present targets as results

Every number has a status, source, formula and stop action; field baselines remain unknown

05 / EVIDENCE

A KNOWN NOW

- 43.6 km² call value
- 11.4 km² call value
- 3 provisional key areas
- no verified night baseline

B RECALCULATED

- 11.413 km² provisional site
- 10.29 km concept routes
- 12.44 ha concept public space
- precision ≠ boundary accuracy

not field performance

C DESIGN TARGET

- 6 personas × 12 scenarios
- 5 industry validations
- 3 nodes × 8 projects
- 100% human stop + non-AI fallback

not field performance

D TO VERIFY

- official boundary + controls
- light / glare / noise / heat
- last link / food / toilet / rest
- ownership / fire / railway safety

STOP CONDITIONS

unclear boundary | no owner | no human takeover | no non-AI fallback | no permit/insurance | receptor worsens | open incident
