

Centennial Jing-Zhang AI Innovation Belt · Jing-Zhang Homecoming Belt

Haidian AI Planning Studio / TooProudToFight · 2026-08 · Concept proposal on provisional boundary (not a statutory plan)

Concept and Three-Level Scope

The Jing-Zhang Homecoming Belt concept: the Jing-Zhang Heritage Park as the historical and public-space spine, the three key districts (Zhongzhiyuan, Beijing AI Origin Community, Dazhongsi) as innovation anchors, forming 'one belt, three cores, multiple scenario nodes, and a blue-green slow-traffic composite ring.' The railway once severed the city; AI should return daily life, streets, and belonging to ordinary people.

Detailed Design of Key Areas

Zhongzhiyuan AI Self-Innovation Acceleration Area — Garden-type full-stack self-innovation block: strengthen Qinghe interface, industry showcase, low-carbon exchange, external transport.

Beijing AI Origin Community — Near-campus achievement-transfer and talent community: campus-park-block slow stitching; release, services, living, open-source space.

Dazhongsi AI Industry Cluster — Urban intelligent economy and international-exchange block: station integration, four-quadrant walkable connectivity, commercial services.

AI Scenario Cards (10, incl. 3 industry test-verification)

01 Open Release Hall	Achievement release & model-evaluation node
02 Safety-Governance Sandbox*	Standard/safety/red-team visitable node
03 Edge-Compute Station	New-infrastructure prototype
04 AI Slow-Traffic Nav	Slow-traffic gap detection
05 Dazhongsi Roadshow Lounge	Showcase/negotiation/exchange
06 Qinghe Low-Carbon Corridor	Park public living room
07 Near-Campus Transfer St	Incubation/legal/finance
08 Data-Factor Lounge*	Compliant data-factor flow
09 AI Life-Service Street	AI+ small-scale block
10 Homecoming-Eye Terminal*	Public memory & test scene

Core Metrics and Compliance

site_area_sqm	11,412,825 m²
green_ratio	0.1234
public_space_ratio	0.0733
building_footprint_area_sqm	310,807 m²
key_area_count	3

This scheme is generated on a provisional boundary; all areas and ratios are intake-level provisional conclusions and must be recalculated after official polygons replace them. It does not claim official approval, approved regulatory plan, or guaranteed implementation. The AI agent is responsible for facts, sources, copyright, spatial data, metrics, and expression.
