

RECIPROCAL JING—ZHANG

A two-way compact between AI growth and urban life | space, economy, people, mobility, ecology, and operations

- PLACE | Haidian's Jing-Zhang heritage public realm: 43.6 km² coordination, about 11.4 km² overall design, and three key areas.
- JUDGMENT | Do not rebuild an AI green axis; operate built and ongoing public space as performance-tested public infrastructure.
- ACTION | Establish baselines, audit complete journeys, operate three reciprocity platforms, and use P01-P08 for reversible trials and rules.
- BOUNDARY | Provisional geometry is not statutory; targets, budgets, scenarios, and G0-G8 professional gates are unapproved.

FACT → ASSUMPTION → PILOT → SCALE

Read all 19 figures beside the professional question they answer; this booklet has a real text layer.

01 / SYSTEM

Reciprocal Jing-Zhang: Six Two-Way Compacts

Every public resource used by AI growth must return a verifiable, pausable, and exit-ready urban benefit.

Conceptual urban-system proposal | boundaries are provisional, not statutory | targets and gates are unapproved

2026.08.10

DECISION NOTES

- The framework is six verifiable, pausable, exit-ready reciprocal compacts—not a new axis.
- Alternatives A and B are explicitly downgraded; C links industry outputs to public rights through operating contracts.
- Fact—assumption—pilot—scale gates prevent a concept drawing from becoming an approval claim.
- All targets, budgets, alignments, and gates remain unapproved.

EVIDENCE: PROVISIONAL / CONCEPT / NOT_APPROVED

06 / SPATIAL ATLAS

A recalculable base map that does not impersonate a statutory boundary

The site, three key areas, audit relationships, blue-green focus, and public platforms are read directly from GeoJSON; dashed lines stay provisional.

Conceptual urban-system proposal | boundaries are provisional, not statutory | targets and gates are unapproved

2026.08.10

DECISION NOTES

- The map reads submission GeoJSON directly and uses no commercial map tiles.
- SITE-001, three key areas, audit links, blue-green focus, and three platforms are recalculable.
- Dashed geometry explicitly means provisional/not official.
- Eighteen building envelopes are relative test fits inside provisional rectangles, not existing buildings or parcels.

EVIDENCE: PROVISIONAL / CONCEPT / NOT_APPROVED

03 / STRUCTURE

Three Scales × Seven-Layer Chain × Three Reciprocity Platforms

43.6 km² organizes industry and governance; 11.4 km² audits existing interfaces; three key areas test distinct public returns.

VALUE LOOP

SEVEN LAYERS

Conceptual urban-system proposal | boundaries are provisional, not statutory | targets and gates are unapproved

2026.08.10

DECISION NOTES

- 43.6 km² coordinates industry and governance; ≈11.4 km² audits existing interfaces; three key areas test prototypes.
- Seven industry layers connect source results, verification, real scenes, first orders, services, and feedback.
- District GDP, firms, patents, and jobs cannot be area-scaled.
- Each scope uses different questions, evidence, and implementation authority.

EVIDENCE: PROVISIONAL / CONCEPT / NOT_APPROVED

04 / ECONOMY + OPERATIONS

Economy means verifiable transfer and decent work—not investment-attraction counts

Results, verification, real scenes, first orders, professional services, and feedback form a loop. District GDP, firms, patents, and jobs must not be area-scaled to 43.6 km².

3-YEAR OPERATING SCENARIOS

FOUR SEPARATE ACCOUNTS

Three-year light-asset operating scenarios exclude land, construction, rent, compute hardware, equity, and general subsidies. All are NOT_APPROVED.

DECISION NOTES

- Source results—validation—real scenes—first orders—global services—feedback form the value loop.
- Three-year low/base/high operating scenarios are CNY 179m / 327.8m / 744m.
- Public product, operating service, equity fund, and data product use separate accounts.
- The scenarios exclude land, construction, rent, compute hardware, equity, and general subsidies; all are unapproved.

EVIDENCE: PROVISIONAL / CONCEPT / NOT_APPROVED

14

11.4 km² Overall Urban Design | One Spine, Three Links, Three Platforms, Many Entrances

The master plan expresses spatial structure, public interfaces, and sequence; provisional limits recede while design relationships lead.

SCHEMATIC | NOT OFFICIAL | UNAPPROVED

SPATIAL GRAMMAR

- 1 ONE SPINE**
Post-completion performance and public-operation backbone
- 3 THREE LINKS**
East-west complete journeys and public interfaces
- 3 THREE PLATFORMS**
Validation, translation, and adoption platforms
- ∞ MANY ENTRANCES**
Station, park, street, community, and non-digital access

DELIVERY ORDER

S0 baseline → S1 reversible repair → S2 evidence-selected reorganization → S3 gated option only

All positions are relative compositions inside provisional rectangles; replace after official boundaries, parcels, buildings, ownership, and specialist evidence arrive.

DECISION NOTES

- One spine organizes post-completion performance and long-term operation without reclaiming existing works.
- Three east-west links test complete journeys in the northern, central, and southern key areas.
- Three platforms specialize in validation, translation, and adoption instead of cloning one AI park.
- Official limits, streets, entrances, parcels, and field evidence must replace the schematic structure.

EVIDENCE: PROVISIONAL / CONCEPT / NOT_APPROVED

05 / KEY AREAS

Three Reciprocity Platforms: Different Maturity Stages, Not Cloned Parks

Validation in the north, translation at the center, adoption in the south—each delivers industry output, public return, and exit.

Conceptual urban-system proposal | boundaries are provisional, not statutory | targets and gates are unapproved

2026.08.10

DECISION NOTES

- Zhongzhiyuan validates the full stack without assuming a large compute center.
- AI Origin gives each result one identifier and one of four transfer pathways.
- Dazhongsi tests adoption, first orders, real payment, and consumer explanation.
- Every platform states an industry role, public return, and stop condition.

EVIDENCE: PROVISIONAL / CONCEPT / NOT_APPROVED

15

ZHONGZHIYUAN | Validation-Return Concept Plan

Turn full-stack testing into a publicly reproducible urban capability

SCHEMATIC | NOT OFFICIAL | UNAPPROVED

TYPOLOGICAL TEST

FAR	HEIGHT
1.5–2.6	12–45 m
Concept band, not statutory control	

SPATIAL SEQUENCE

- 1 Public-service edge
- 2 Reversible test court
- 3 Open validation spine
- 4 Independent review + risk archive

STOP CONDITIONS

- No independent reproduction: no scale
- No utility capacity: no high load
- No worker support: no opening

All positions are relative compositions inside provisional rectangles; replace after official boundaries, parcels, buildings, ownership, and specialist evidence arrive.

DECISION NOTES

- An open validation spine links shared tests, independent review, public explanation, and worker support.
- FAR 1.5–2.6 and 12–45 m are typological sensitivity bands only.
- No independent reproduction, utility capacity, or public support means no scale.
- The relative test fit is not Zhongzhiyuan's actual parcels, buildings, or engineering.

EVIDENCE: PROVISIONAL / CONCEPT / NOT_APPROVED

16

AI ORIGIN | Translation and Co-Creation Concept Plan

Route university outcomes before validation and startup decisions

SCHEMATIC | NOT OFFICIAL | UNAPPROVED

TYPOLOGICAL TEST

FAR	HEIGHT
1.5–2.5	12–36 m
Concept band, not statutory control	

SPATIAL SEQUENCE

- 1 Everyday-service edge
- 2 Outcome-routing court
- 3 Knowledge co-creation spine
- 4 License/open source/joint R&D/startup

STOP CONDITIONS

- Unclear ownership: no test
- Campus access is negotiated item by item
- Net basic-service loss: pause

All positions are relative compositions inside provisional rectangles; replace after official boundaries, parcels, buildings, ownership, and specialist evidence arrive.

DECISION NOTES

- A knowledge co-creation spine links outcome intake, routing, proof of concept, and everyday services.
- FAR 1.5–2.5 and 12–36 m are typological sensitivity bands only.
- Unclear ownership blocks testing; campus and venue access is negotiated item by item.
- The relative test fit is not AI Origin's actual parcels, buildings, or engineering.

EVIDENCE: PROVISIONAL / CONCEPT / NOT_APPROVED

17
DAZHONGSI | Adoption-Return Concept Plan

Put trials, first orders, consumer explanation, and expiry into one public loop

SCHEMATIC | NOT OFFICIAL | UNAPPROVED

TYPOLOGICAL TEST

FAR	HEIGHT
2.0–3.5	12–45 m
Concept band, not statutory control	

SPATIAL SEQUENCE

- 1 Quiet community edge
- 2 Four-quadrant public loop
- 3 Urban adoption spine
- 4 First orders + international partnership

STOP CONDITIONS

- No verified station exterior: no complete-access claim
- Related-party deals are not external payment
- Unclosed night noise: stop

All positions are relative compositions inside provisional rectangles; replace after official boundaries, parcels, buildings, ownership, and specialist evidence arrive.

DECISION NOTES

- An urban adoption spine and four-quadrant loop connect trials, first orders, explanation, and exit.
- FAR 2.0–3.5 and 12–45 m are typological sensitivity bands only.
- Unverified outdoor accessibility, night noise, or consumer safeguards block opening.
- The relative test fit is not Dazhongsi's actual parcels, buildings, or engineering.

EVIDENCE: PROVISIONAL / CONCEPT / NOT_APPROVED

18

Two Representative Sections × Retain–Adapt–Infill Decision

Sections test public edges, active ground floors, massing transitions, and climate commons; R-A-I sets a decision order, never a real-building verdict.

A-A Heritage park—public terrace—shared ground floor—adaptable lab

Stepped height is an interface test only; sunlight, fire, heritage, rail protection, and controls remain pending.

B-B Urban street—staffed services—mixed middle—rooftop climate commons

Stepped height is an interface test only; sunlight, fire, heritage, rail protection, and controls remain pending.

SCHEMATIC | NOT OFFICIAL | UNAPPROVED

R-A-I DECISION ORDER

R RETAIN

Clear tenure, usable structure/fire safety, existing public value

A ADAPT

Reversible, low-impact, tenant return, energy/access improvement

I INFILL STUDY

Only after controls, tenure, utilities, heritage, sunlight, and public review

All 18 current envelopes = await building survey; no actual demolish, infill, or retain decision exists.

All positions are relative compositions inside provisional rectangles; replace after official boundaries, parcels, buildings, ownership, and specialist evidence arrive.

DECISION NOTES

- Section A-A tests the heritage park, public terrace, shared ground floor, and adaptable lab edge.
- Section B-B tests the urban street, staffed services, mixed middle, and rooftop climate commons.
- R-A-I means retain first, adapt second, and only then study infill.
- All 18 envelopes await building survey; no actual demolish, infill, or retain decision exists.

EVIDENCE: PROVISIONAL / CONCEPT / NOT_APPROVED

06 / MEMORY + RIGHTS

From engineering self-strengthening to public intelligence: time, rights, responsibility

History is not decoration. Every narrative layer shows verifiable facts, contemporary meaning, and the authorization boundary it cannot cross.

EIGHT RIGHTS-HOLDER GROUPS

Cover 8/8 groups each round; report night, extreme-weather, and worst-10% journeys separately. Participation and journey baselines remain uncollected.

Conceptual urban-system proposal | boundaries are provisional, not statutory | targets and gates are unapproved

2026.08.10

DECISION NOTES

- The narrative moves from engineering self-strengthening to public intelligence without reducing history to decoration.
- Eight rights-holder groups cover residents, age and disability, service workers, couriers, researchers, small tenants, and visitors.
- Participation retains original comments, dissent, public responses, and exit records.
- Heritage limits, oral-history authorization, and real cultural routes await official and field evidence.

EVIDENCE: PROVISIONAL / CONCEPT / NOT_APPROVED

07 / SCENARIOS + PROJECTS

Twelve scenarios and eight near-term packages: every item has human takeover and exit

Scenarios are not a product list; packages are not construction commitments. Reversible pilots require clear rights, data, sites, independent tests, and accountable owners.

AI-01

PROJECT-P02 performance audit

PROJECT-P03 result intake

PROJECT-P04 shared validation

PROJECT-P05 public problems

PROJECT-P06 first-order clinic

PROJECT-P07 low-cost space

PROJECT-P08 S1 repair

The first four are industry test/validation scenarios. All 12 scenarios and P01-P08 remain concept/proposal without site, data, procurement, budget, or operating authorization.

Conceptual urban-system proposal | boundaries are provisional, not statutory | targets and gates are unapproved

2026.08.10

DECISION NOTES

- Twelve AI scenarios bind a public problem to human takeover, non-digital alternatives, and exit.
- P01–P08 start with baselines, performance audits, result intake, shared verification, public problems, and S1 repair.
- The 0–12 month portfolio is a proposal, not a construction commitment.
- Without site, data, procurement, budget, or operating authority, every item stays proposal-only.

EVIDENCE: PROVISIONAL / CONCEPT / NOT_APPROVED

Conceptual urban-system proposal | provisional geometry is not statutory | targets, budgets, and gates are unapproved

13 · 2026.08.10

08 / LAND-USE ATLAS

Four conceptual capacities: topology check, not statutory zoning

Four conceptual zones fully cover the provisional site. Their areas are recalculable but do not represent existing use, legal zoning, ownership, or development quota.

CONCEPT CAPACITY

R&D + validation 2.675 km² · 23.4% TOPOLOGY ONLY	PROPOSAL
park / open space 2.589 km² · 22.7% TOPOLOGY ONLY	PROPOSAL
industry + business services 3.366 km² · 29.5% TOPOLOGY ONLY	PROPOSAL
community + daily services 2.783 km² · 24.4% TOPOLOGY ONLY	PROPOSAL
R-A-I Building footprints, FAR, height, retain-adapt-demolish, and development capacity remain UNKNOWN until official parcels, controls, ownership, and building surveys arrive.	UNKNOWN

Conceptual urban-system proposal | boundaries are provisional, not statutory | targets and gates are unapproved

2026.08.10

DECISION NOTES

- Four conceptual capacities cover the provisional site for topology and area-closure checks only.
- Shares are not existing land use, statutory zoning, ownership, or development control.
- Building, FAR, and height values are unapproved test fits; existing conditions and statutory controls remain UNKNOWN.
- Official parcels and controls trigger a full-chain recalculation.

EVIDENCE: PROVISIONAL / CONCEPT / NOT_APPROVED

09 / PEOPLE + COMPLETE JOURNEYS

Test public life through three worst-case journeys—not isochrone circles

A station facility does not prove a complete outdoor journey. Real entrances, opening hours, weather, failures, and human alternatives determine usability.

Northern service worker

curb→entrance→work→water/rest/toilet/charge→return

peak / night / storm

BASELINE UNKNOWN

Central child-carer + disabled user

rail→exit→crossing→open space→toilet/rest→return

lift outage / obstruction / non-digital signs

BASELINE UNKNOWN

Southern older resident + cultural visitor

community→station exterior→park/museum spur→service→return

Line 13 barrier / detour / booking

BASELINE UNKNOWN

Closed campus/company facilities do not count; app-only service is incomplete; any unresolved critical break invalidates an accessible-route claim.

REAL SERVICE BASKETS

5 MIN

VERIFY ENTRY + HOURS

toilet / water / shade-seat / convenience / help / paper wayfinding

10 MIN

VERIFY ENTRY + HOURS

breakfast-food / clinic-pharmacy / childcare / eldercare / repair-delivery / exercise

15 MIN

VERIFY ENTRY + HOURS

health / culture-sport / civic service / industry service

DECISION NOTES

- Three northern, central, and southern worst-case journeys replace abstract isochrones.
- Each journey checks entrances, crossings, toilets, rest, water, help, and return.
- Closed campus/company facilities do not count; app-only access is incomplete.
- No route may be called fully accessible while a critical break remains.

EVIDENCE: PROVISIONAL / CONCEPT / NOT_APPROVED

10 / MOBILITY + ECOLOGY

From Drawn Continuity to Complete Journeys and Blue-Green Performance

The built Jing-Zhang public realm enters the S0 baseline; reversible gaps are repaired only where demand, detour, and evidence align.

COMPLETE JOURNEY

Conceptual urban-system proposal | boundaries are provisional, not statutory | targets and gates are unapproved

2026.08.10

DECISION NOTES

- With Phase II supporting works announced complete, the proposal shifts to access, gaps, operations, and performance.
- S0 baseline is mandatory; S1 reversible repair comes first; S2 is evidence-selected; S3 is optional.
- An in-station facility does not prove a complete outdoor journey: entrances, hours, outages, weather, and human alternatives matter.
- Stormwater work must be co-modeled with the Qinghe–Xiaoyue CSO project.

EVIDENCE: PROVISIONAL / CONCEPT / NOT_APPROVED

11 / ECOLOGY + UTILITIES

Three blue-green networks and a minimum utility package: prove capacity before devices

Public access, hydrological safety, and habitat are audited separately. Rivers, pipes, trees, flood points, and heat maps remain UNKNOWN until evidence arrives.

PUBLIC ACCESS

PERFORMANCE

legal entrances / hours / access / non-consumption stay

HYDROLOGICAL SAFETY

PERFORMANCE

catchments / pipes / CSO / low points / river level

HABITAT

PERFORMANCE

trees / native plants / fauna / dark zones / migration breaks

UTILITY EVIDENCE MATRIX

	ZHONGZHIYUAN	AI ORIGIN	DAZHONGSI	
POWER	UNKNOWN	UNKNOWN	UNKNOWN	G3 / G4 / G5 / G6 / NO SCALE GREEN-001's 8.1548% is a conceptual performance-focus envelope, not existing or approved green space. Safety-critical scenes must degrade to human control in outages (unapproved gate).
WATER	UNKNOWN	UNKNOWN	UNKNOWN	
COMMS	UNKNOWN	UNKNOWN	UNKNOWN	
FIRE	UNKNOWN	UNKNOWN	UNKNOWN	
HEAT/NOISE	UNKNOWN	UNKNOWN	UNKNOWN	
FLOOD	UNKNOWN	UNKNOWN	UNKNOWN	
MAINTAIN/REMOVE	UNKNOWN	UNKNOWN	UNKNOWN	

DECISION NOTES

- Public access, hydrological safety, and habitat are modeled and judged separately.
- Power, water, communications, fire, heat, noise, flood, and maintenance are checked by area.
- 8.1548% is a conceptual blue-green focus-envelope ratio—not an existing or approved green ratio.
- Unknown capacity or added downstream risk blocks device scale-up.

EVIDENCE: PROVISIONAL / CONCEPT / NOT_APPROVED

RECIPROCITY SEASONS | Agent.6 Operating System

A parent brand, four-season loop, open community, eight-step scenario access, and eight-stage conversion funnel; all are unapproved operating proposals.

SCHEMATIC | NOT OFFICIAL | UNAPPROVED

RECIPROCAL JING-ZHANG ×
RECIPROCITY SEASONS
Two opposing rails stay open for public refusal, human review, and exit.

OPEN PROBLEM

Publish problems and evidence limits

CONTROLLED TEST

Pilots, red teams, and human takeover

CITY ADOPTION

First orders, public experience, explanation

OPEN REVIEW

Publish results, failures, and exits

- DEVELOPER COMMONS
- Open registration + code of conduct
 - 2 open sessions/month + quarterly public review
 - Traceable contributions, failures, conflicts, and exits

30-DAY SCENARIO ACCESS SLA

01 Complete application	02 Authority + problem match
03 Data/safety/equity screen	04 Sandbox + red-team plan
05 Time-boxed pilot	06 Independent acceptance
07 Approve/revise/reject with reasons	08 Exit, portability, restoration

EIGHT-STAGE CONVERSION, NOT EXPOSURE

01 REACH	02 QUALIFIED VISIT
03 PROBLEM MATCH	04 FORMAL APPLICATION
05 AUTHORIZED TEST	06 INDEPENDENT ACCEPTANCE
07 QUALIFIED FIRST ORDER / COLLAB	08 RETENTION / RETURN

All positions are relative compositions inside provisional rectangles; replace after official boundaries, parcels, buildings, ownership, and specialist evidence arrive.

DECISION NOTES

- Reciprocal Jing-Zhang is the parent brand and Reciprocity Seasons is the annual operating brand; the open double rail preserves public refusal, human review, and exit.
- Four seasons connect open problems, controlled validation, city adoption, and a public ledger.
- The developer commons, eight-step scenario-access process, and three landmark SLAs assign responsibility and exit.
- International conversion follows reach—qualified visit—problem matching—formal application—authorized test—independent acceptance—qualified first order or collaboration—retention or return.

EVIDENCE: PROVISIONAL / CONCEPT / NOT_APPROVED

12 / GOVERNANCE + GATES

The public is not an end-stage voter: six participation steps, four responsibility layers, nine

AI may cluster comments, but original views, dissent, and human judgment remain. Investment attraction, finance, testing, and complaints cannot sit with one actor.

STATUTORY STRATEGY

problem / budget / red lines

RESPONSIBILITY

PMO

records / contracts / disclosure: no investing/supply

RESPONSIBILITY

MULTIPLE OPERATORS

compete by task; anchors do not monopolize

RESPONSIBILITY

INDEPENDENT PUBLIC-INTEREST LAYER

testing / appeal / failure + exit reports

RESPONSIBILITY

G0-G8 HARD GATES

- G0 space+rights
- G1 transport+rail
- G2 accessibility
- G3 water+flood
- G4 trees+habitat
- G5 microclimate
- G6 utilities+compute
- G7 heritage+vibration
- G8 operations+public interest

A round cannot close before valid comments receive public reasons. Any uncleared gate allows only lower-commitment research or temporary trials.

DECISION NOTES

- Participation moves through public problems, joint walks, option comparison, small pilots, joint review, and public response/exit.
- Statutory strategy, PMO, multiple operators, and an independent public-interest layer separate powers.
- G0–G8 cover rights, rail, access, water, ecology, climate, utilities, heritage, and operations.
- Any uncleared gate permits only lower-commitment research or temporary trials.

EVIDENCE: PROVISIONAL / CONCEPT / NOT_APPROVED

13 / METRICS + EVIDENCE

Reciprocal Outcomes Dashboard: Do Not Mix Baselines, Targets, and Gates

Only collected evidence is a baseline; proposal targets may be quantified but must remain unapproved and tied to stop conditions.

INDUSTRY
paid adoption / reproduction / PoC time

WORK
contracts / wages / retention

EQUITY
low-cost hours / rent control

MOBILITY
DI / interchange / accessible chain

SERVICES
real entrance / opening hours

CLIMATE
shade / water / CSO

CULTURE
sources / 8 groups / free access

GOVERNANCE
appeal / deletion / restore / exit

EVIDENCE STATE

OFFICIAL
official approximate fact

PROVISIONAL
temporary geometry measure

UNKNOWN
baseline not collected

PROPOSAL
unapproved target / gate

STOP CONDITIONS

no independent test

net service loss

blocked public access

data not deletable

added downstream risk

heritage/right uncleared

DECISION NOTES

- UNKNOWN baselines remain null and cannot be replaced by target values.
- Targets and exit gates may be known parameters only when labeled proposal_target/proposal_gate and not_approved.
- Metrics cover industry, work, equity, mobility, service, ecology, culture, and governance.
- Meeting a metric never grants government authorization or engineering approval.

EVIDENCE: PROVISIONAL / CONCEPT / NOT_APPROVED
