

01 / DESIGN JUDGMENT

AI as a contestable, reversible and co-maintained civic mending capacity

THE MENDING LINE: FROM RAIL HERITAGE TO CIVIC PROVING

Urban context + one heritage commons spine + four site-specific stitches + three reversible stations

01 HERITAGE FIRST — keep the rail trace legible

02 PUBLIC FIRST — repair access and care before tech

03 AI LATER — publish the problem before choosing a model

04 REVERSIBLE DELIVERY — take over, repair or retire

LAUNCH SEQUENCE

P1 charter + problem atlas / P2 access walk audit

P3–P5 three time-limited pilots / P6–P7 model library + Mending Week

Context: © OpenStreetMap contributors (extract 2026-08-09), orientation only. Dashed extent is provisional, not a statutory boundary.

Provisional boundaries and operating interfaces support concept co-creation only. Official polygons trigger complete regeneration.

02 / FOUR REAL FRICTIONS

AI as a contestable, reversible and co-maintained civic mending capacity

Provisional boundaries and operating interfaces support concept co-creation only. Official polygons trigger complete regeneration.

03 / FIVE SHARED-EDGE ROLES

AI as a contestable, reversible and co-maintained civic mending capacity

FIVE SHARED-EDGE COMMONS, NOT FIVE EQUAL BANDS

Program follows nodes, spine and interfaces in the real street context; provisional extent recedes

ROLES, NOT STATUTORY USES

Each names the leading civic interface

NODES

Three stations bind users and operators

SPINE

Heritage, ecology, walking and review stay continuous

INTERFACES

Four stitches answer four real frictions

Context: © OpenStreetMap contributors (extract 2026-08-09), orientation only. Dashed extent is provisional, not a statutory boundary.

Provisional boundaries and operating interfaces support concept co-creation only. Official polygons trigger complete regeneration.

04 / THREE KEY AREAS

AI as a contestable, reversible and co-maintained civic mending capacity

THREE MENDING STATIONS: THREE NON-INTERCHANGEABLE INTERFACES

Each station binds a site friction, spatial kit, operating action and exit rule

OPERATING INTERFACE — NOT A BUILDING SITE OR CANDIDATE PARCEL

Underpass access audit / sponge tests / human takeover drills

Reversible frame · tactile route · low-tech fallback

Campus-industry challenge table / model-card clinic / failure archive

Reversible frame · tactile route · low-tech fallback

Four-quadrant wayfinding / SME clinic / accessible fallback route

Reversible frame · tactile route · low-tech fallback

Context: © OpenStreetMap contributors (extract 2026-08-09), orientation only. Dashed extent is provisional, not a statutory boundary.

Provisional boundaries and operating interfaces support concept co-creation only. Official polygons trigger complete regeneration.

05 / CONTINUITY FIRST

AI as a contestable, reversible and co-maintained civic mending capacity

CONTINUITY FIRST: RAIL, STREETS, HERITAGE WALK AND BLUE-GREEN CROSS

Four stitches answer Fifth Ring/Xiaoyue River, Wudaokou, Xueyuan South and Dazhongsi

CONTINUITY AUDIT ORDER

- 1 Walking and wheelchair continuity
- 2 Cycle-conflict repair
- 3 Rail-transfer wayfinding
- 4 Waterfront and sponge interface
- 5 Human crowd management

Context: © OpenStreetMap contributors (extract 2026-08-09), orientation only. Dashed extent is provisional, not a statutory boundary.

Provisional boundaries and operating interfaces support concept co-creation only. Official polygons trigger complete regeneration.

06 / SECTION AND KIT

AI as a contestable, reversible and co-maintained civic mending capacity

Provisional boundaries and operating interfaces support concept co-creation only. Official polygons trigger complete regeneration.

07 / SPATIAL PROTOTYPE

AI-generated concept; not an existing view, official plan or construction rendering.

08 / 12 AI SCENARIOS

01	Accessible-route mending
02	Multilingual heritage guide
03	Slow-mobility gap repair
04	Comfort diary
05	Model-card clinic
06	Open reproduction desk
07	SME AI clinic
08	Care-roster assistant
09	Campus-industry matching
10	Low-tech continuity drill
11	Low-carbon compute timing
12	Public-comment synthesis

09 / SEVEN LAUNCH PROJECTS

P1 Charter + Problem Atlas	Belt-wide	Charter, ledger, data/exit templates
P2 Heritage Access Audit	Whole line	Gap list, fallback routes, priorities
P3 Safe Proving Commons	Zhongzhiyuan	Reliability tests, failures, takeover
P4 Open Reproduction Desk	AI Origin	Reproduction, residencies, clinic
P5 Everyday AI Clinic	Dazhongsi	Accessible, vendor-neutral advice
P6 Public Model Library	Three stations	Cards, versions, failure, retirement
P7 Mending Week	Rotating	Open tests, review, next challenges

10 / G0 → G1 → G2 → G3

G0 EVIDENCE	Provenance, rights, official boundary
G1 PUBLIC	Real users co-define; non-digital route
G2 PROFESSIONAL	Heritage, transport, safety, privacy, engineering
G3 EXIT	Scale, repair or retire with record

Start P1–P2, compare P3–P5, and institutionalize P6–P7 only after G3.

11 / METRICS, EVIDENCE AND RISK

METRICS ARE RECOMPUTABLE EVIDENCE, NOT PROMISES

PROVISIONAL BOUNDARY • CONCEPT CO-CREATION • NOT AN OFFICIAL PLAN

GeoJSON → EPSG:4548 calculation → metrics.json → figures / HTML / PDFs

PENDING: official polygons • statutory controls • ownership / heritage / transport / utility evidence

Provisional boundaries and operating interfaces support concept co-creation only. Official polygons trigger complete regeneration.
