

Jing-Zhang Signal Commons / Overall Structure

One slow-mobility spine · three anchors · four public interfaces

SIGNAL GARDEN

CONCEPT / PROVISIONAL DATA

Provisional boundary is a low-contrast constraint; design intent carries the visual emphasis.

Land Use Structure / Four Public Interfaces

Conceptual partition, not a statutory control

SIGNAL GARDEN

CONCEPT / PROVISIONAL DATA

Shared edges are generated from one partition; official data will trigger full recalculation.

Three Key Areas / Differentiated Anchors

Spatial move · public interface · test case · implementation gate

SIGNAL GARDEN

CONCEPT / PROVISIONAL DATA

01 Zhongzhiyuan AI Acceleration

Garden full-stack test district

Safety + low-carbon sandbox

02 Beijing AI Origin Community

Near-campus translation neighbourhood

Open-source + results transfer

03 Dazhongsi AI Industry Cluster

Urban smart-economy living room

Agents + smart devices + data

IMPLEMENTATION GATES

Official polygon

Ownership + road redline

Utilities + fire safety

Accessibility + public acceptance

Rights-cleared identity

Key-area polygons are provisional constraints and must not be read as parcel redlines.

Mobility + Blue-Green / Walkable Signal Line

Slow mobility, green continuity, public rooms, and accessible services

SIGNAL GARDEN

CONCEPT / PROVISIONAL DATA

Blue-green and mobility layers are design proposals, not measured current-condition evidence.

Evidence Dashboard / Metrics + Delivery

Rounded intake metrics, pending controls, tests, and gates

SIGNAL GARDEN

CONCEPT / PROVISIONAL DATA

EVIDENCE FLOW

TEST PROTOCOLS

- T1 safety sandbox: red-team + exit gate
- T2 mobility: accessibility audit + manual override
- T3 edge compute: capacity + privacy budget

PENDING

Values are rounded for provisional intake; replace and recalculate after official data arrives.
