

The Pass Line

Jing-Zhang Pass Line

Before any AI service may enter a street, it must first pass a live walk-test on site across four use scenarios — children, elderly, accessibility, and caregivers. No clearance, no street.

Five Sub-Gates

- Comprehensible
- Choosable
- Supervised
- Correctable
- Exitable

Three Areas × Three Gates

- Zhongzhiyuan
Prototype Gate
- Origin Community
Family Gate
- Dazhongsi
Business Gate

Three AI Pilgrimage Landmarks

- Pass-Gate Plazas (×3)
- Kid Probe Line (unique)
- Caregiver Honor Wall

Cultural Narrative

The Jing-Zhang Railway used a switchback line to overcome the Nankou grade — the first time Chinese engineering turned impassable into passable. This proposal turns that engineering wisdom into AI governance's Switchback Clearance: AI services split at the pass gate — qualified ones enter the street, unqualified ones return to the sandbox.
