

Jingzhang AI Commons | North-up spatial evidence

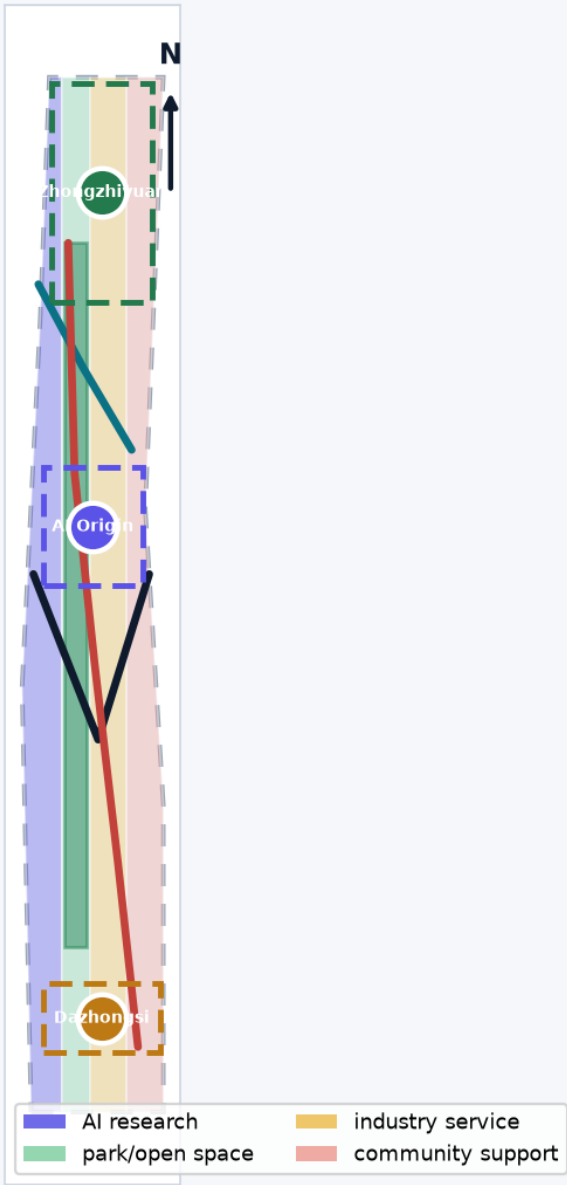

Concept proposal based on repository provisional geometry

North-up relative location overview

The three key areas read north-to-south; the dashed outline is a provisional constraint, not an official redline.

Jingzhang AI Commons | North-up spatial overview

Submitted provisional boundary and design layers; no official redline or existing-parcel claim.

Reading guide

Three areas
Zhongzhiyuan north, AI Origin in the middle, Dazhongsi south.

Concept lines
Spine, blue-green connector and station access await verification.

Boundary status
Dashed outline is a repository provisional constraint only.

Spatial relations derive from submitted GeoJSON. Provisional boundary is for conceptual review only, not an official redline.

Concept proposal based on repository provisional geometry

Three key-area implementation units

Research/governance, near-campus transfer and station-city showcase are assigned to the three areas, subject to professional gates.

Three key areas | North-to-south implementation units

Provisional polygons retain geographic relative position only.

Implementation units

- Zhongzhiyuan | north**
Research district + Qinghe interface
Safety, standards and low-disturbance exchange.
- AI Origin | middle**
Near-campus conversion street + talent loop
Open-source publishing and daily services.
- Dazhongsi | south**
Station arrival + four-quadrant walking
Showcase, access and public interface.

Spatial relations derive from submitted GeoJSON. Provisional boundary is for conceptual review only, not an official redline.

Jingzhang AI Commons | North-up spatial evidence

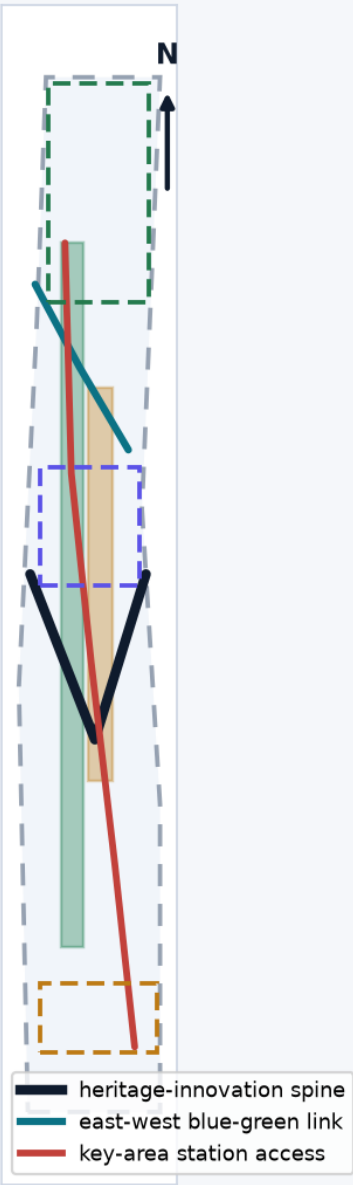

Concept proposal based on repository provisional geometry

Mobility and blue-green network

The three lines are concepts for checking walking, access, utilities and public-space coordination.

Mobility and blue-green network | Concept lines

Submitted design layers, not existing road redlines, engineering sections or approvals.

Priority order

- Walk first**
Safe crossings, accessibility, lighting and weather protection.
- Then access**
Cycling, station transfer, necessary vehicle movement and event egress.
- Utilities together**
Compute/service nodes need power, fire, noise and maintenance checks.

Spatial relations derive from submitted GeoJSON. Provisional boundary is for conceptual review only, not an official redline.

Metrics and evidence chain

Known metrics test package consistency; they do not derive FAR, height or approval conclusions.

Metrics and evidence chain | Recomputable, not statutory

Known values test internal consistency; all spatial layers must be recalculated when official data arrives.

Known metrics do not establish FAR, height, road redlines or approval conclusions.
