

JING-ZHANG LIVING TRANSECT: Testing AI Innovation with Urban Habitat

One heritage spine · three living labs · four shared systems

DESIGN THESIS

Treat the railway corridor as a public transect: every AI service is tested together with shade, water, habitat and non-digital fallback.

 HABITAT LEDGER / biodiversity observations

 WATER LEDGER / rain and reuse

 FOOD LEDGER / edible commons

 AI LEDGER / purpose, steward, stop rule

FOUR SHARED SYSTEMS OVER THE LAND-USE BASE

The proposal adds reversible public layers; it does not invent statutory land-use controls.

REVERSIBLE PUBLIC LAYERS

Habitat / 生境

stepping stones + seasonal refuge

Water / 雨水

visible retention + maintenance

Food / 食物

edible edge + community stewardship

AI / 智能

minimal sensing + manual fallback

Official controls pending / 正式控规条件待补

THREE LIVING LABS, THREE DIFFERENT QUESTIONS

The provisional polygons are constraints, not approved redlines.

01 / ZHONGZHIYUAN

Can full-stack AI operate within resource budgets?

- compute-heat-water ledger
- robotics + pollinator-safe edge
- stop and restoration drill

PROVISIONAL / 待复核

02 / AI ORIGIN

Can innovation improve ordinary daily life?

- campus-community seed library
- edible learning streets
- human service fallback

PROVISIONAL / 待复核

03 / DAZHONGSI

Can market-facing AI remain publicly accountable?

- food + retail provenance
- station rain garden
- public incident and appeal desk

PROVISIONAL / 待复核

SLOW MOBILITY + BLUE-GREEN + HABITAT CONTINUITY

People first; robotics and sensing remain guests in public space.

SIX NETWORK RULES

- 01 continuous walking and cycling
- 02 shade and rest every segment
- 03 visible rainwater path
- 04 habitat stepping stones
- 05 robot speed / time / stop rules
- 06 non-digital wayfinding

EVIDENCE CHAIN: FROM GEOMETRY TO PUBLIC DECISION

Known values are recomputed; statutory controls stay pending.

Four extra ledgers are design commitments, not fabricated baseline metrics: habitat, water, food and AI accountability. Their numeric baselines remain pending field survey.
