

In one sentence: the switchback the Jing-Zhang railway used to climb the Guangou pass is translated from a railway device into an urban one — arrival flows from the two sides the railway separated reverse and meet on the heritage-park spine, so one move delivers both east-west stitching and north-south continuity.

Structure: one spine · three cores · two wings · five switchback stitches

Areas: Source Valley · Origin Works · Bellworks

Wings: Zhongguancun allocation wing · Xiaoyuehe proving wing

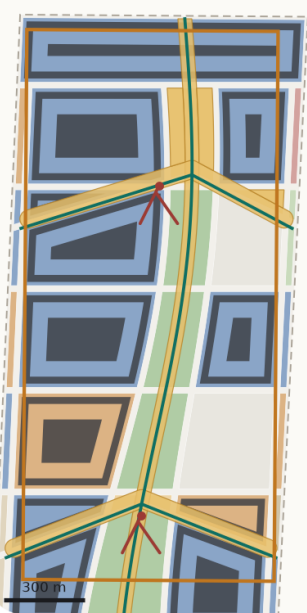

Detailed design index for the three key areas

Each area states positioning, spatial moves, AI scenarios and dependencies; geometry is a concept suggestion inside the provisional extents

FIG 03 / key areas

1. Source Valley · Zhongqiyuan AI acceleration area

About 192.1 ha | full-stack sovereign innovation and governance white

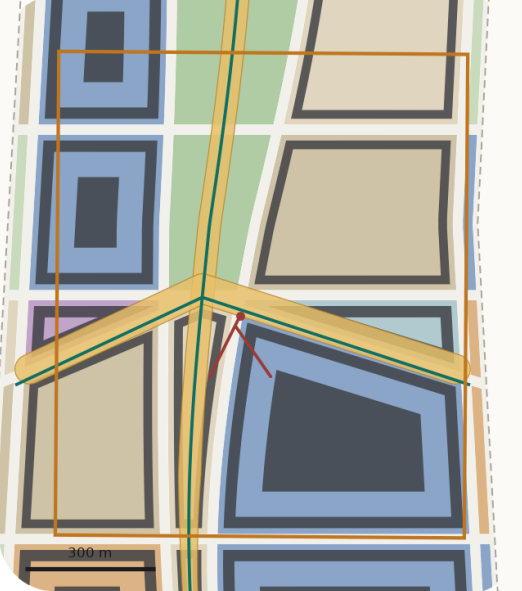

Move a reserved white/red belt to the north being capacity for compact energy and new infrastructures.

Move research clusters group along both ends of the spine, giving a continuous modular lab-to-path heritage.

Scenario: model evaluation and safety red-green grounds, data-rich verification data, an open governance forum.

Dependencies: official entries, meeting ownership and municipal capacity, to be confirmed by professional teams.

2. Origin Works · Beijing AI Origin Community

About 104.3 ha | world-class ecosystem and talent district

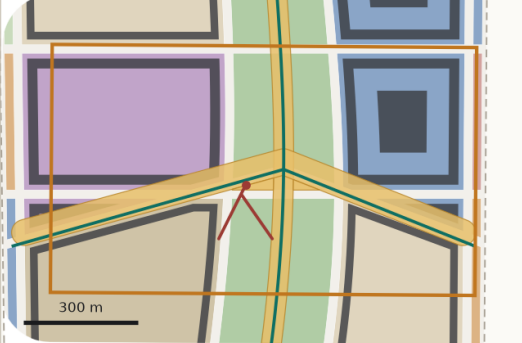

Move education, culture and community service land site on the campus side, so the work here lecture hall to start-up first-stage enterprises.

Move housing mixes with community facilities to answer talent-housing demand.

Scenario: open-source coworking, a vibrant and dense hub, youth start-up and living-service agents.

Dependencies: the talent innovation ecosystem classification, existing ownership and station integration need professional deepening.

3. Bellworks · Dazhongqi AI Industry cluster

About 72.0 ha | AI-native commerce and business

Move commercial service land groups around the site, and the first quadrant of the junction are connected by the switchback disk.

Move cultural land across the boundary between the Great Bell Temple renovation and the new AI culture.

Scenario: smart-device and content consumption, data-governance and digitalized services, blockchain support from disk.

Dependencies: station integration and heritage protection zones must follow official data.

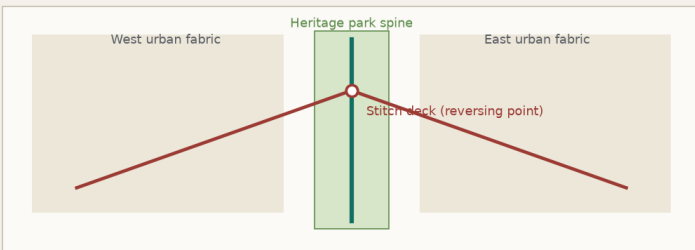

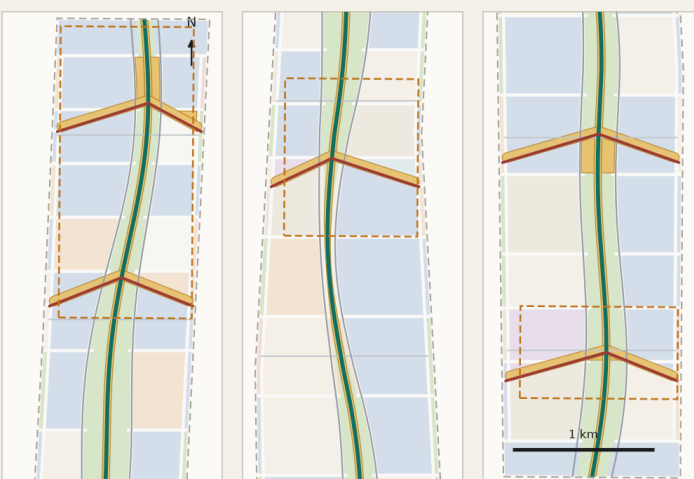

Provisional constraint: inferred from the announced textual extents, not an official redline; recalculate when official geometry is published. Concept suggestion and reference scheme for professional teams to deepen. Not statutory planning or an approved government conclusion.

Mobility, slow travel and the blue-green public network

A continuous north-south slow mobility spine, five east-west switchback stitches, and a continuous park and plaza network

FIG 04 / mobility bluegreen

The 田-shaped stitch: one move, two problems

Why did the Jing Zhang valley divided by grade with a single switchback movement? This proposal argues for some moves to the NW - central area has both sides traffic and road on the same, driving the two sides to valley, cross separation without the need for a road bridge.

Reference data

Northgate stitch

Origin stitch

Valley south stitch

Valley north stitch

Slow mobility spine W that on public space 4.4% of the submitted area, green space 27.7%.

Boundary note: whether open stitch is at green, water or road is an engineering feasibility question. This proposal states no intention: professional teams must handle 1. urban fabric, green, blue, and 2. engineering requirements.

Provisional constraint: inferred from the announced textual extents, not an official redline; recalculate when official geometry is published. Concept suggestion and reference scheme for professional teams to deepen. Not statutory planning or an approved government conclusion.

Metric recalculation, task coverage and evidence state

Every value is recalculated from the submitted GeoJSON in EPSG:4548; unknown items stay explicitly marked as pending official data

Submitted area 11.41 km² provisional	Green ratio 17.7% no green here	Public-space ratio 8.4% no public space	Gross footprint coverage 25.0% no building
Open-mobility spine 9.75 km continuous	New green ratio 369.3 ha provisional 369.3 ha	Land-use features 123 no green, no forests	AI scenario cards 12 no future AI

Announcement and agent task coverage (compliance_matrix.json)

1.1.1	1.1.2	1.1.3	1.1.4	1.1.5	1.1.6	1.1.7	1.1.8	1.1.9	1.1.10	1.1.11	1.1.12	1.1.13	1.1.14
OK	OK	OK	OK	OK	OK	OK	OK	OK	OK	OK	OK	OK	OK

1.2.1	1.2.2	1.2.3	1.2.4	1.2.5	1.2.6	1.2.7	1.2.8	1.2.9	1.2.10	1.2.11	1.2.12	1.2.13	1.2.14
OK	OK	OK	OK	OK	OK	OK	OK	OK	OK	OK	OK	OK	OK

Self-check state (four gates)

Professional evidence	RCS

Metrics explicitly kept as pending official data

floor_area_ratio	building_height_control_m	resident_population
Pending official regulatory controls and the official boundary; this proposal does not intend to be officially official controls; this proposal states no building-height conclusion.		Pending official population data consistent with the submitted boundary.

Provisional constraint: inferred from the announced textual extents, not an official redline; recalculate when official geometry is published. Concept suggestion and reference scheme for professional teams to deepen. Not statutory planning or an approved government conclusion.
