

Switchback Rising — The Jing-Zhang AI Belt

Centennial Jing-Zhang AI Innovation Belt open call · concept proposal

In one sentence: the switchback the Jing-Zhang railway used to climb the Guangou pass is translated from a railway device into an urban one — arrival flows from the two sides the railway separated reverse and meet on the heritage-park spine, so one move delivers both east-west stitching and north-south continuity.

Structure: one spine · three cores · two wings · five switchback stitches

Areas: Source Valley · Origin Works · Bellworks

Wings: Zhongguancun allocation wing · Xiaoyuehe proving wing

Submitted area	Green ratio	Public space	Slow-mobility spine	Key areas total	Land-use features
11.41 km ²	17.7%	8.4%	9.75 km	369.3 ha	123

Structure and three-level scope

Centennial Jing-Zhang AI Innovation Belt open call · concept proposal

Switchback Rising · Jing-Zhang AI Belt | Structure and three-level scope

FIG-01 / site-overview

One continuous spine, three anchor cores, two servicing wings, five switchback stitches

Land-use structure and block grain

FIG-02 / land-use-structure

The land-use layer tiles the submitted boundary with no gaps or overlaps; blocks are cut by the concept street network, inset, and the complement becomes street land

Land-use composition (recomputed in EPSG:4548)

How to read this drawing:

- The continuous central green spine is the heritage-park AI public space, 17.7% of the submitted area.
- Research land is grouped along both flanks of the spine, giving every lab a park frontage.
- Reserved white land is concentrated in northern Source Valley, keeping capacity for compute, energy and new infrastructure.
- Street land is the complement of the inset blocks: it expresses block grain, not road redlines.

Pending official data: FAR, building height, setbacks, ownership and the retain/renovate/demolish classification are not inferred here.

Provisional constraint: inferred from the announced textual extents. Not an official redline; recalculate when official geometry is published. Concept suggestion and reference scheme for professional teams to deepen. Not statutory planning or an approved government conclusion.

Provisional constraint: inferred from the announced textual extents, not an official redline; recalculate when official geometry is published. This document is a concept suggestion and reference scheme for professional teams to deepen; it does not replace statutory planning.

Detailed design index for the three key areas

Centennial Jing-Zhang AI Innovation Belt open call · concept proposal

Detailed design index for the three key areas

FIG-03 / key-areas

Each area states positioning, spatial moves, AI scenarios and dependencies; geometry is a concept suggestion inside the provisional extents

1. Source Valley · Zhongzhiyuan AI acceleration area

About 192.1 ha | full-stack sovereign innovation and governance voice

- Move: a reserved white-land belt in the north keeps capacity for compute, energy and new infrastructure.
- Move: research clusters group along both flanks of the spine, giving a continuous walkable lab-to-park frontage.
- Scenarios: model evaluation and safety red-team grounds, standards verification labs, an open governance forum.
- Dependencies: official extents, existing ownership and municipal capacity, to be confirmed by professional teams.

2. Origin Works · Beijing AI Origin Community

About 104.3 ha | world-class ecosystem and talent district

- Move: education, culture and community-service land sits on the campus side, so the walk from lecture hall to start-up desk stays continuous.
- Move: housing mixes with community facilities to answer talent-housing demand.
- Scenarios: open-source co-working, a release and demo hall, youth start-up and living-service agents.
- Dependencies: the retain/renovate/demolish classification, existing ownership and station integration need professional deepening.

3. Bellworks · Dazhongsi AI industry cluster

About 72.0 ha | AI-native commerce and business

- Move: commercial-service land groups around the stitch, and the four quadrants of the junction are connected by the switchback deck.
- Move: culture land carries the handover between the Great Bell Temple narrative and the new AI culture.
- Scenarios: smart-device and content consumption, data-element and digital-asset services, a business-agent front desk.
- Dependencies: station integration and heritage protection zones must follow official data.

Provisional constraint: inferred from the announced textual extents. Not an official redline; recalculate when official geometry is published. Concept suggestion and reference scheme for professional teams to deepen. Not statutory planning or an approved government conclusion.

Provisional constraint: inferred from the announced textual extents, not an official redline; recalculate when official geometry is published. This document is a concept suggestion and reference scheme for professional teams to deepen; it does not replace statutory planning.

Mobility, slow travel and the blue-green public network

FIG-04 / mobility-bluegreen

A continuous north-south slow-mobility spine, five east-west switchback stitches, and a continuous park and plaza network

The ㄣ-shaped stitch: one move, two problems

Why ㄣ: the Jing-Zhang railway climbed its grade with a single switchback reversal. This proposal applies the same move to the city — arrival flows from both sides reverse and meet on the spine, stitching the two sides the railway once separated without breaking the continuous north-south park.
Five stitches, south to north:

- Bellworks stitch
- Northgate stitch
- Origin stitch
- Valley south stitch
- Valley north stitch

Slow-mobility spine 9754 m; public space 8.4% of the submitted area; green space 17.7%.

Boundary note: whether each stitch is at grade, under or over is an engineering-feasibility question. This proposal states no conclusion; professional teams must resolve it against heritage, green-line, rail and traffic-safety requirements.

Provisional constraint: inferred from the announced textual extents. Not an official redline; recalculate when official geometry is published. Concept suggestion and reference scheme for professional teams to deepen. Not statutory planning or an approved government conclusion.

Provisional constraint: inferred from the announced textual extents, not an official redline; recalculate when official geometry is published. This document is a concept suggestion and reference scheme for professional teams to deepen; it does not replace statutory planning.

Metric recalculation, task coverage and evidence state

Centennial Jing-Zhang AI Innovation Belt open call · concept proposal

Metric recalculation, task coverage and evidence state

FIG-05 / metrics-evidence

Every value is recomputed from the submitted GeoJSON in EPSG:4548; unknown items stay explicitly marked as pending official data

Submitted area 11.41 km² provisional	Green ratio 17.7% from green layer	Public-space ratio 8.4% from public layer	Gross footprint coverage 25.0% concept only
Slow-mobility spine 9.75 km continuous	Key areas total 369.3 ha announced 368.4 ha	Land-use features 123 no gaps, no overlaps	AI scenario cards 12 taskbook ≥10

Announcement and agent task coverage (compliance_matrix.json)

1.3.1 OK	1.3.2 OK	1.3.3 OK	1.4.1 OK	1.4.2 OK	1.4.3 OK	1.5.1.1 OK	1.5.1.2 OK	1.5.2.1 OK	1.5.2.2 OK	1.5.2.3 OK
1.5.2.4 OK	1.5.2.5 OK	1.5.3.1 OK	1.5.3.2 OK	1.5.3.3 OK	agent.1 OK	agent.2 OK	agent.3 OK	agent.4 OK	agent.5 OK	agent.6 OK

Self-check state (four gates)

Deterministic validation	PASS
Spatial review	PASS (3 provisional notes)
Visual packaging	PASS
Professional evidence	PASS

The three provisional notes come from the organiser's key-area polygons not yet being published. By the rules this does not block content scoring, but the areas must not be used as formal scoring evidence.

Metrics explicitly kept as pending official data

floor_area_ratio Pending official regulatory controls and the official boundary; this proposal does not infer from official controls; this proposal states no building-height conclusion.	building_height_control_m Pending official controls; this proposal states no building-height conclusion.	resident_population Pending official population data consistent with the submitted boundary.
