

01 A BEIJING-SPECIFIC STRATEGY

decide in the city · verify off-site · authorize once · exit at any step

Regulation is spatial structure, not an appendix

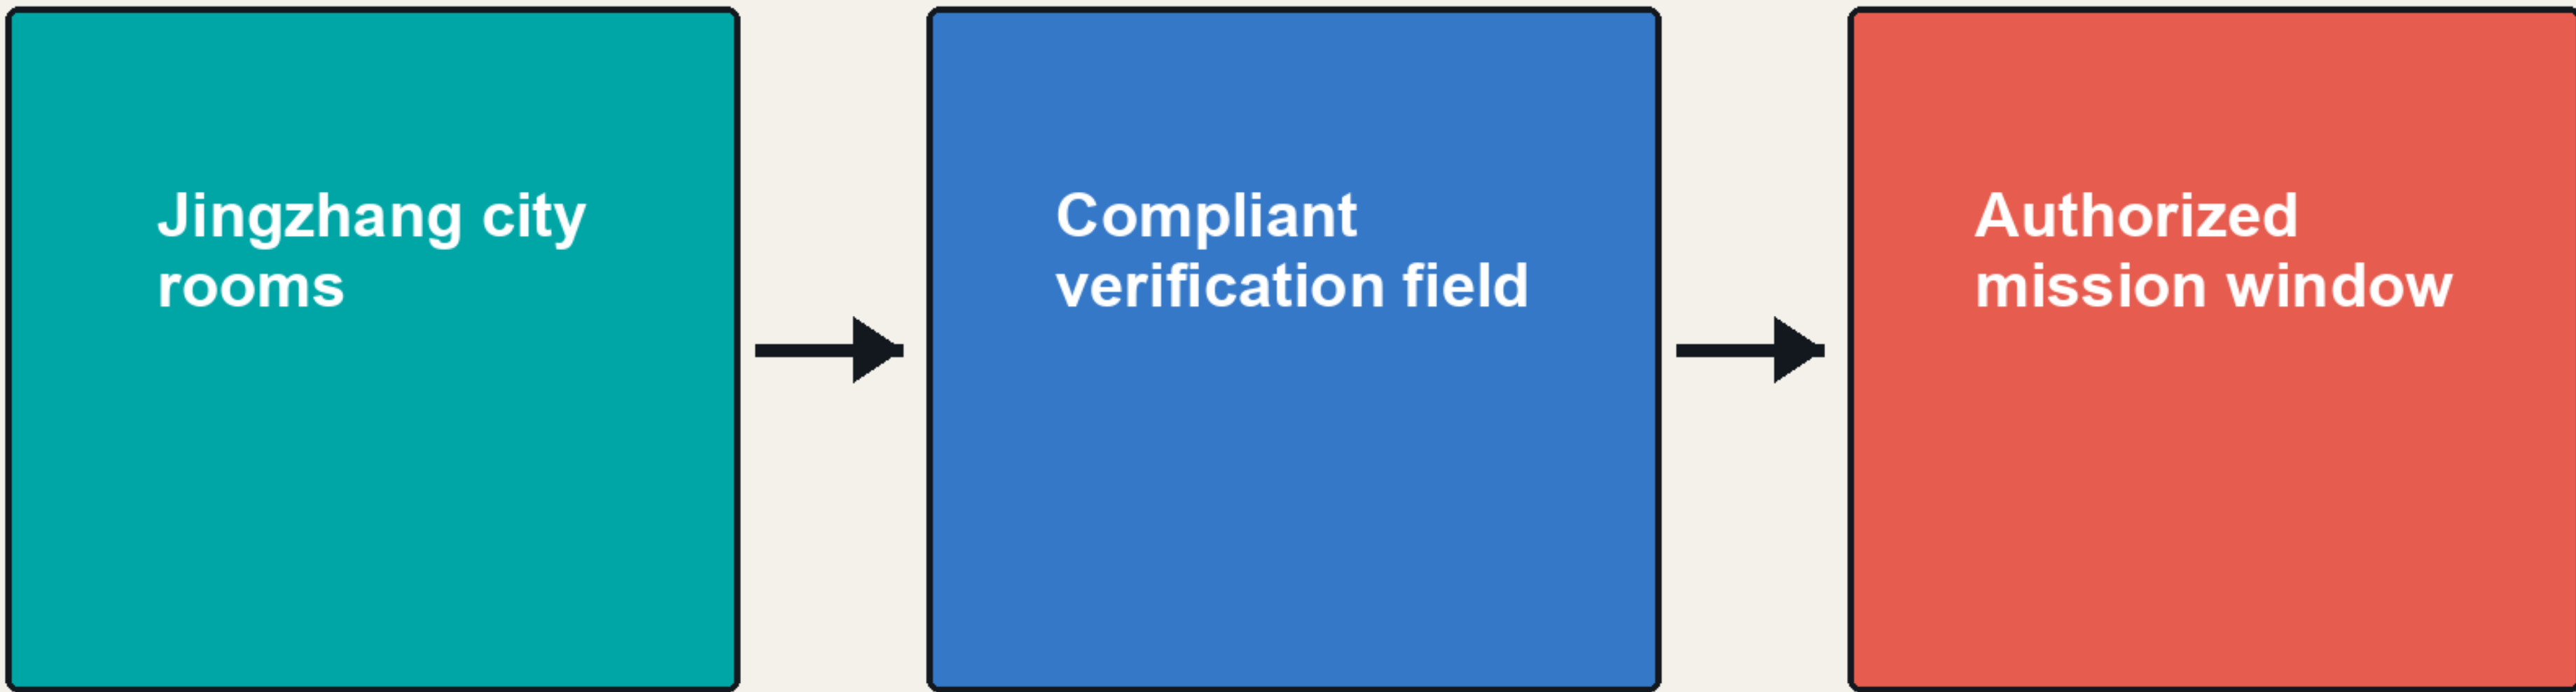

BOUNDED SKY 2.0

CONCEPT ONLY · NOT AN AUTHORIZATION OR IMPLEMENTATION COMMITMENT

Strategy: city decision · off-site verification · approved entry

BOUNDED SKY 2.0

Every stage may conclude: do not fly

CONCEPT ONLY · NOT AN AUTHORIZATION OR IMPLEMENTATION COMMITMENT

Why there is no route map

- Outdoor UAS activity requires application and approval
- Sixth-Ring custody and special safeguards need separate review
- Policy, planning, construction, and flight approval do not substitute for one another

What the project actually builds

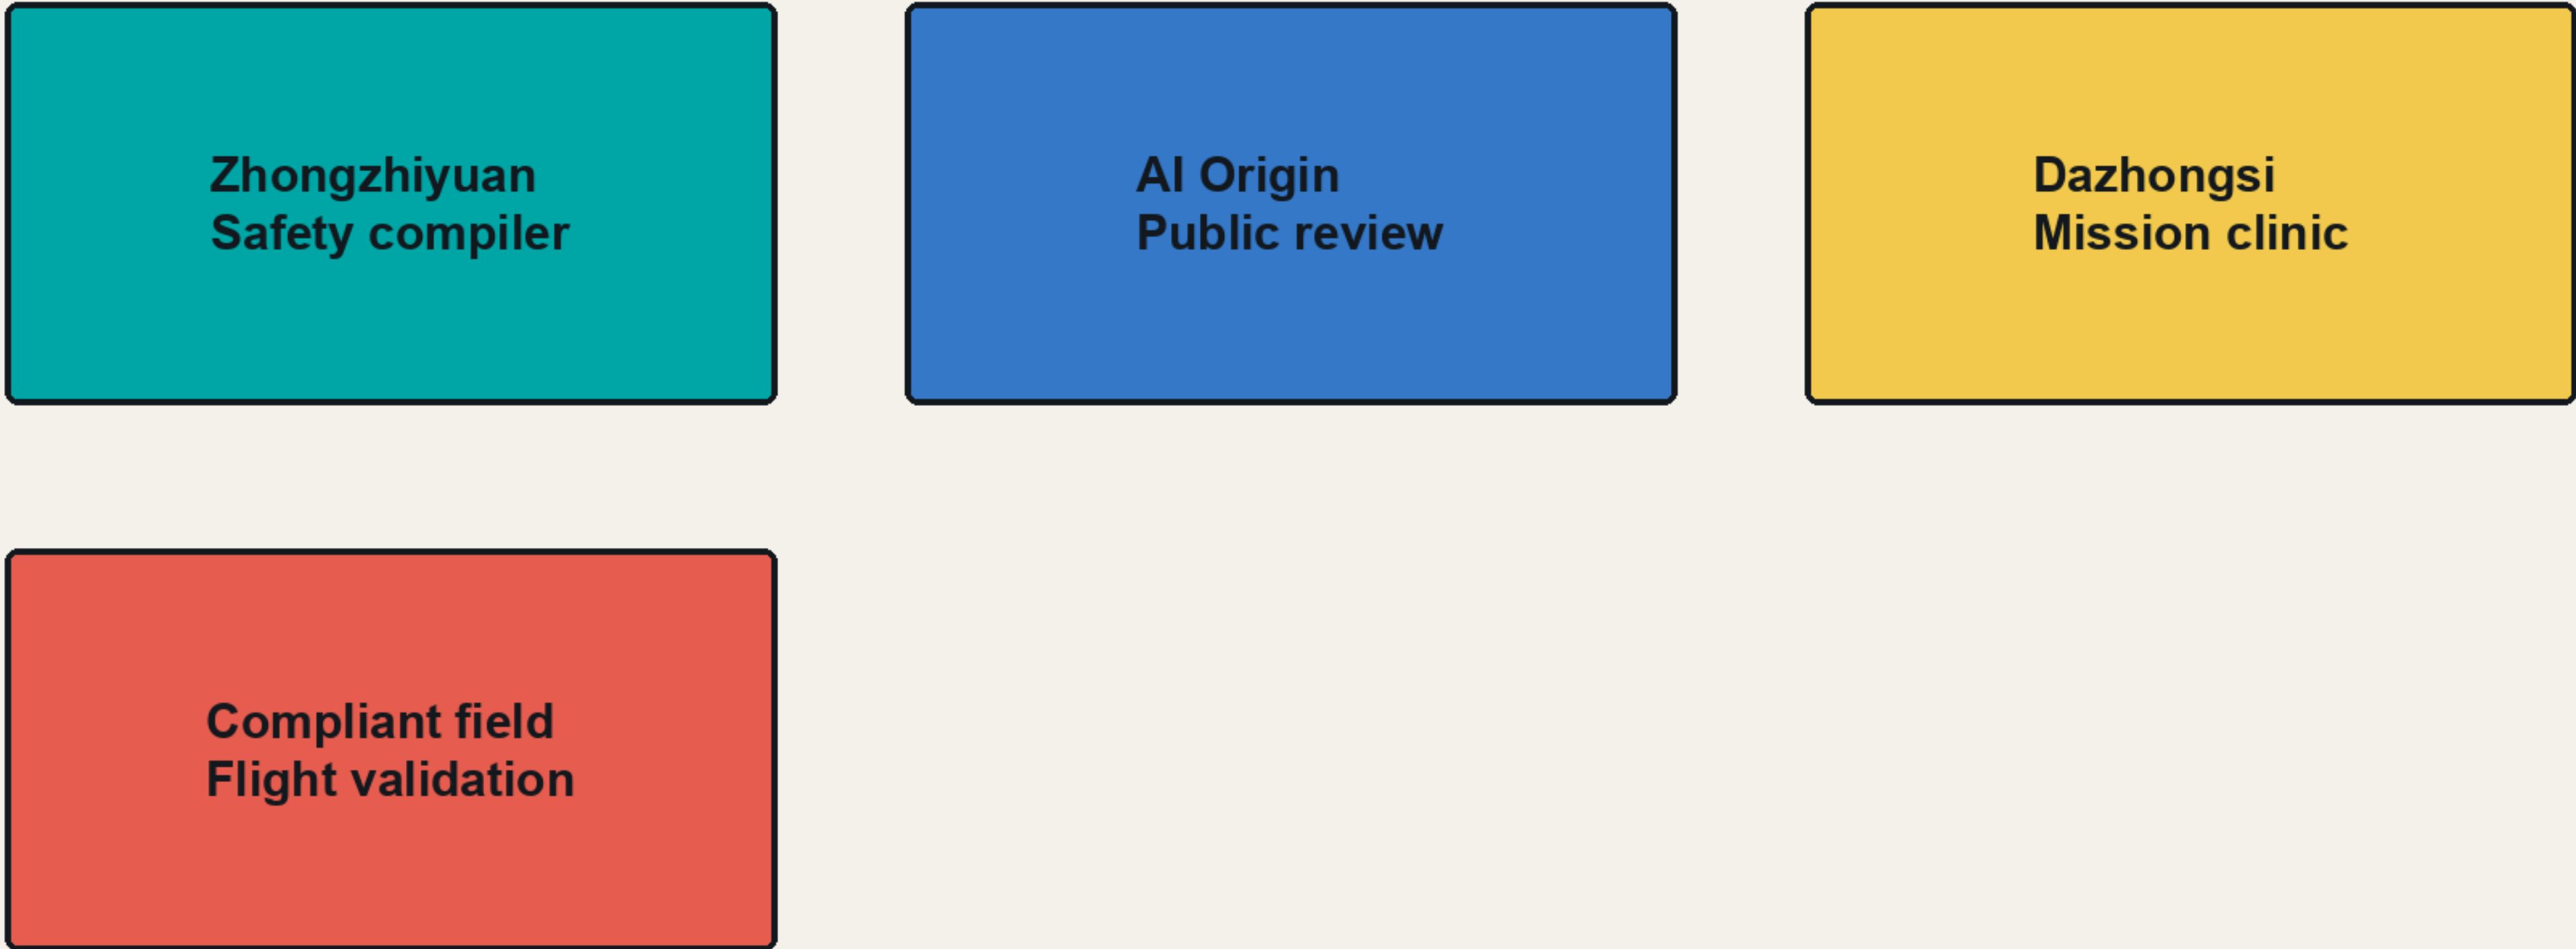

- A public-task library and ground counterfactuals
- Rules, audit, explanation, and public review
- Reversible city rooms and an external verification interface

02 THREE CITY ROOMS

not three flight courtyards, but three public-governance capabilities

Three key areas: city rooms without default flight

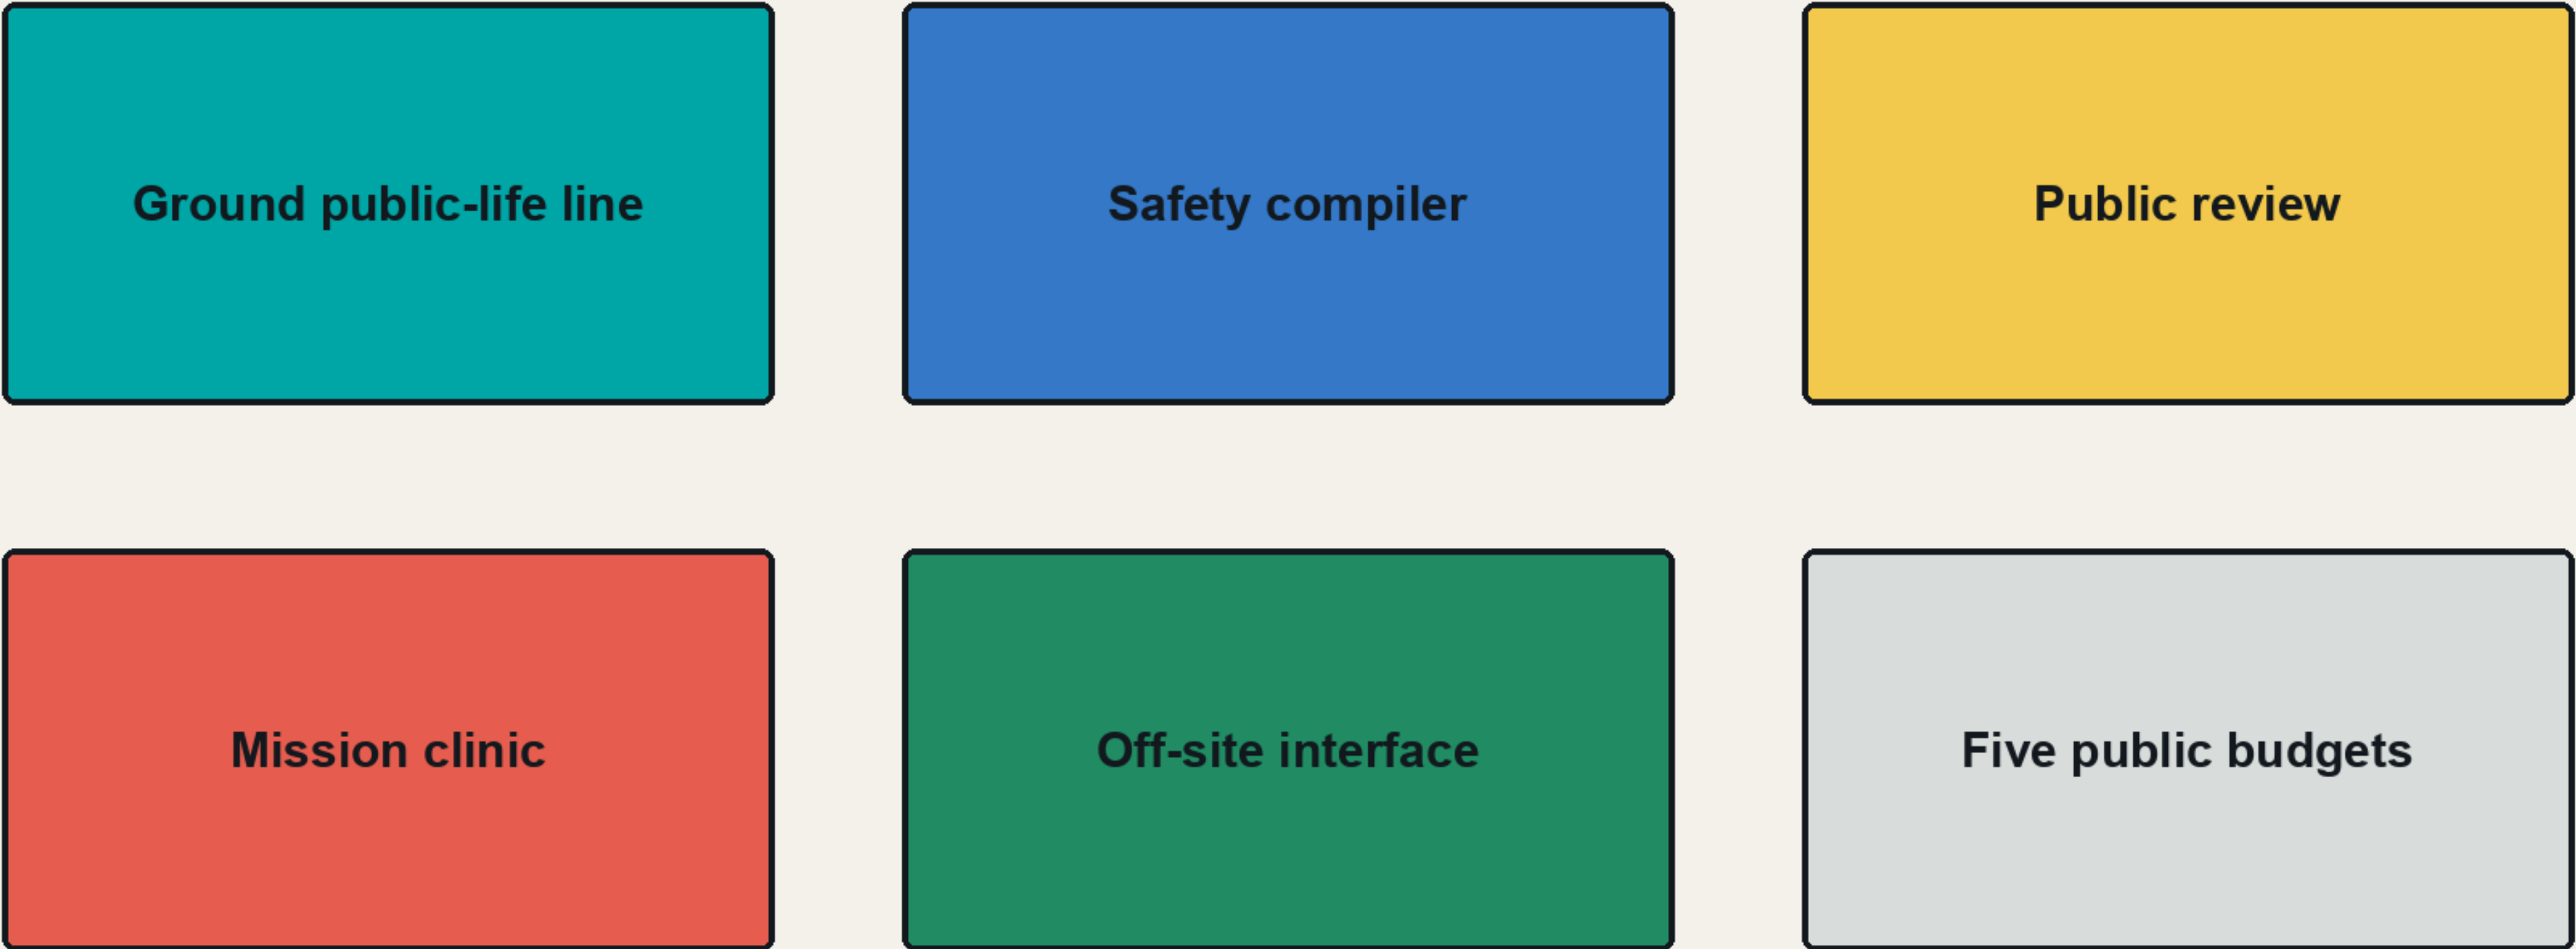

BOUNDED SKY 2.0

CONCEPT ONLY · NOT AN AUTHORIZATION OR IMPLEMENTATION COMMITMENT

One line · three rooms · one field · five ledgers · two wings

BOUNDED SKY 2.0

CONCEPT ONLY · NOT AN AUTHORIZATION OR IMPLEMENTATION COMMITMENT

Zhongzhiyuan • safety compiler

- Compiles needs into admissible or refused evidence packets
- Connects rules, space, simulation, failure, and audit
- Stores no aircraft and does not command flight

AI Origin / Dazhongsi

- Reviews noise, privacy, fairness, and exit
- Compares ground, assisted, and no-action options
- Reuses existing space through reversible fit-out

03 PUBLIC MISSIONS AND REFUSALS

six real needs · four validation families · two requests that remain closed

Twelve tasks: six public · four tests · two rejections

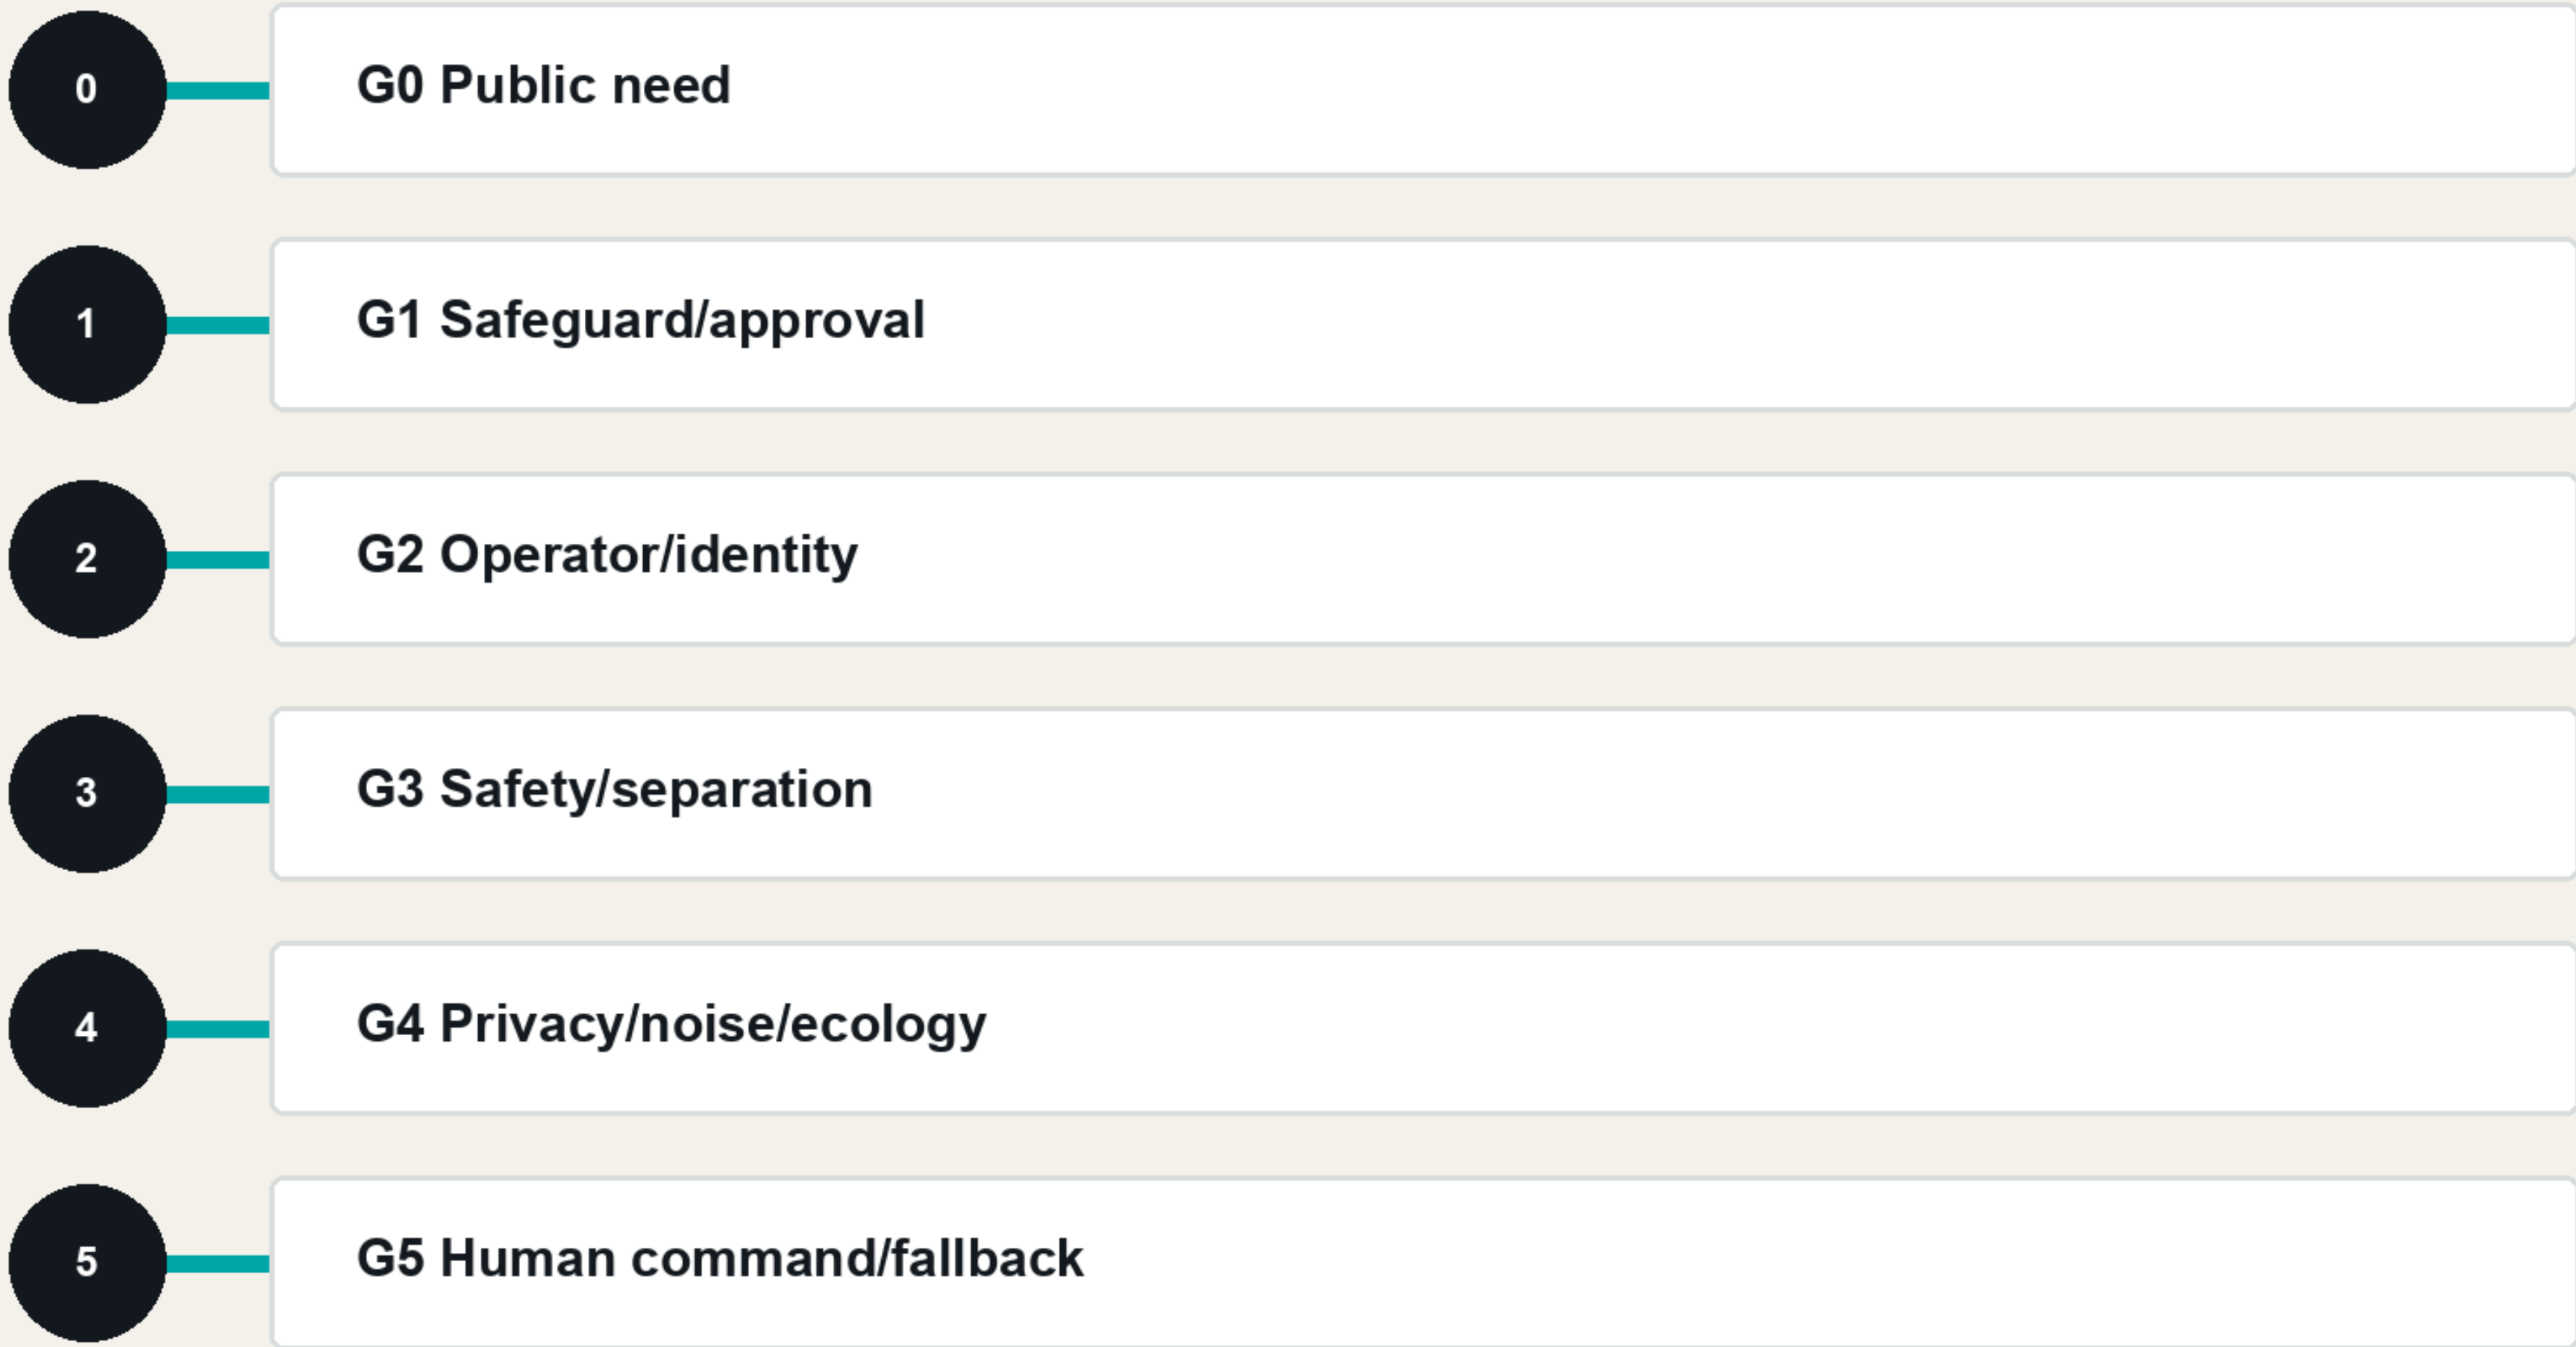

BOUNDED SKY 2.0

CONCEPT ONLY · NOT AN AUTHORIZATION OR IMPLEMENTATION COMMITMENT

Six hard gates: budgets cannot buy permission

BOUNDED SKY 2.0

CONCEPT ONLY · NOT AN AUTHORIZATION OR IMPLEMENTATION COMMITMENT

Public tasks worth studying

- Disaster links, high-rise fire, urgent medical
- Flood mapping, green-space fire risk, heritage and municipal inspection
- Every task needs a ground comparison and stop condition

Explicitly refused now

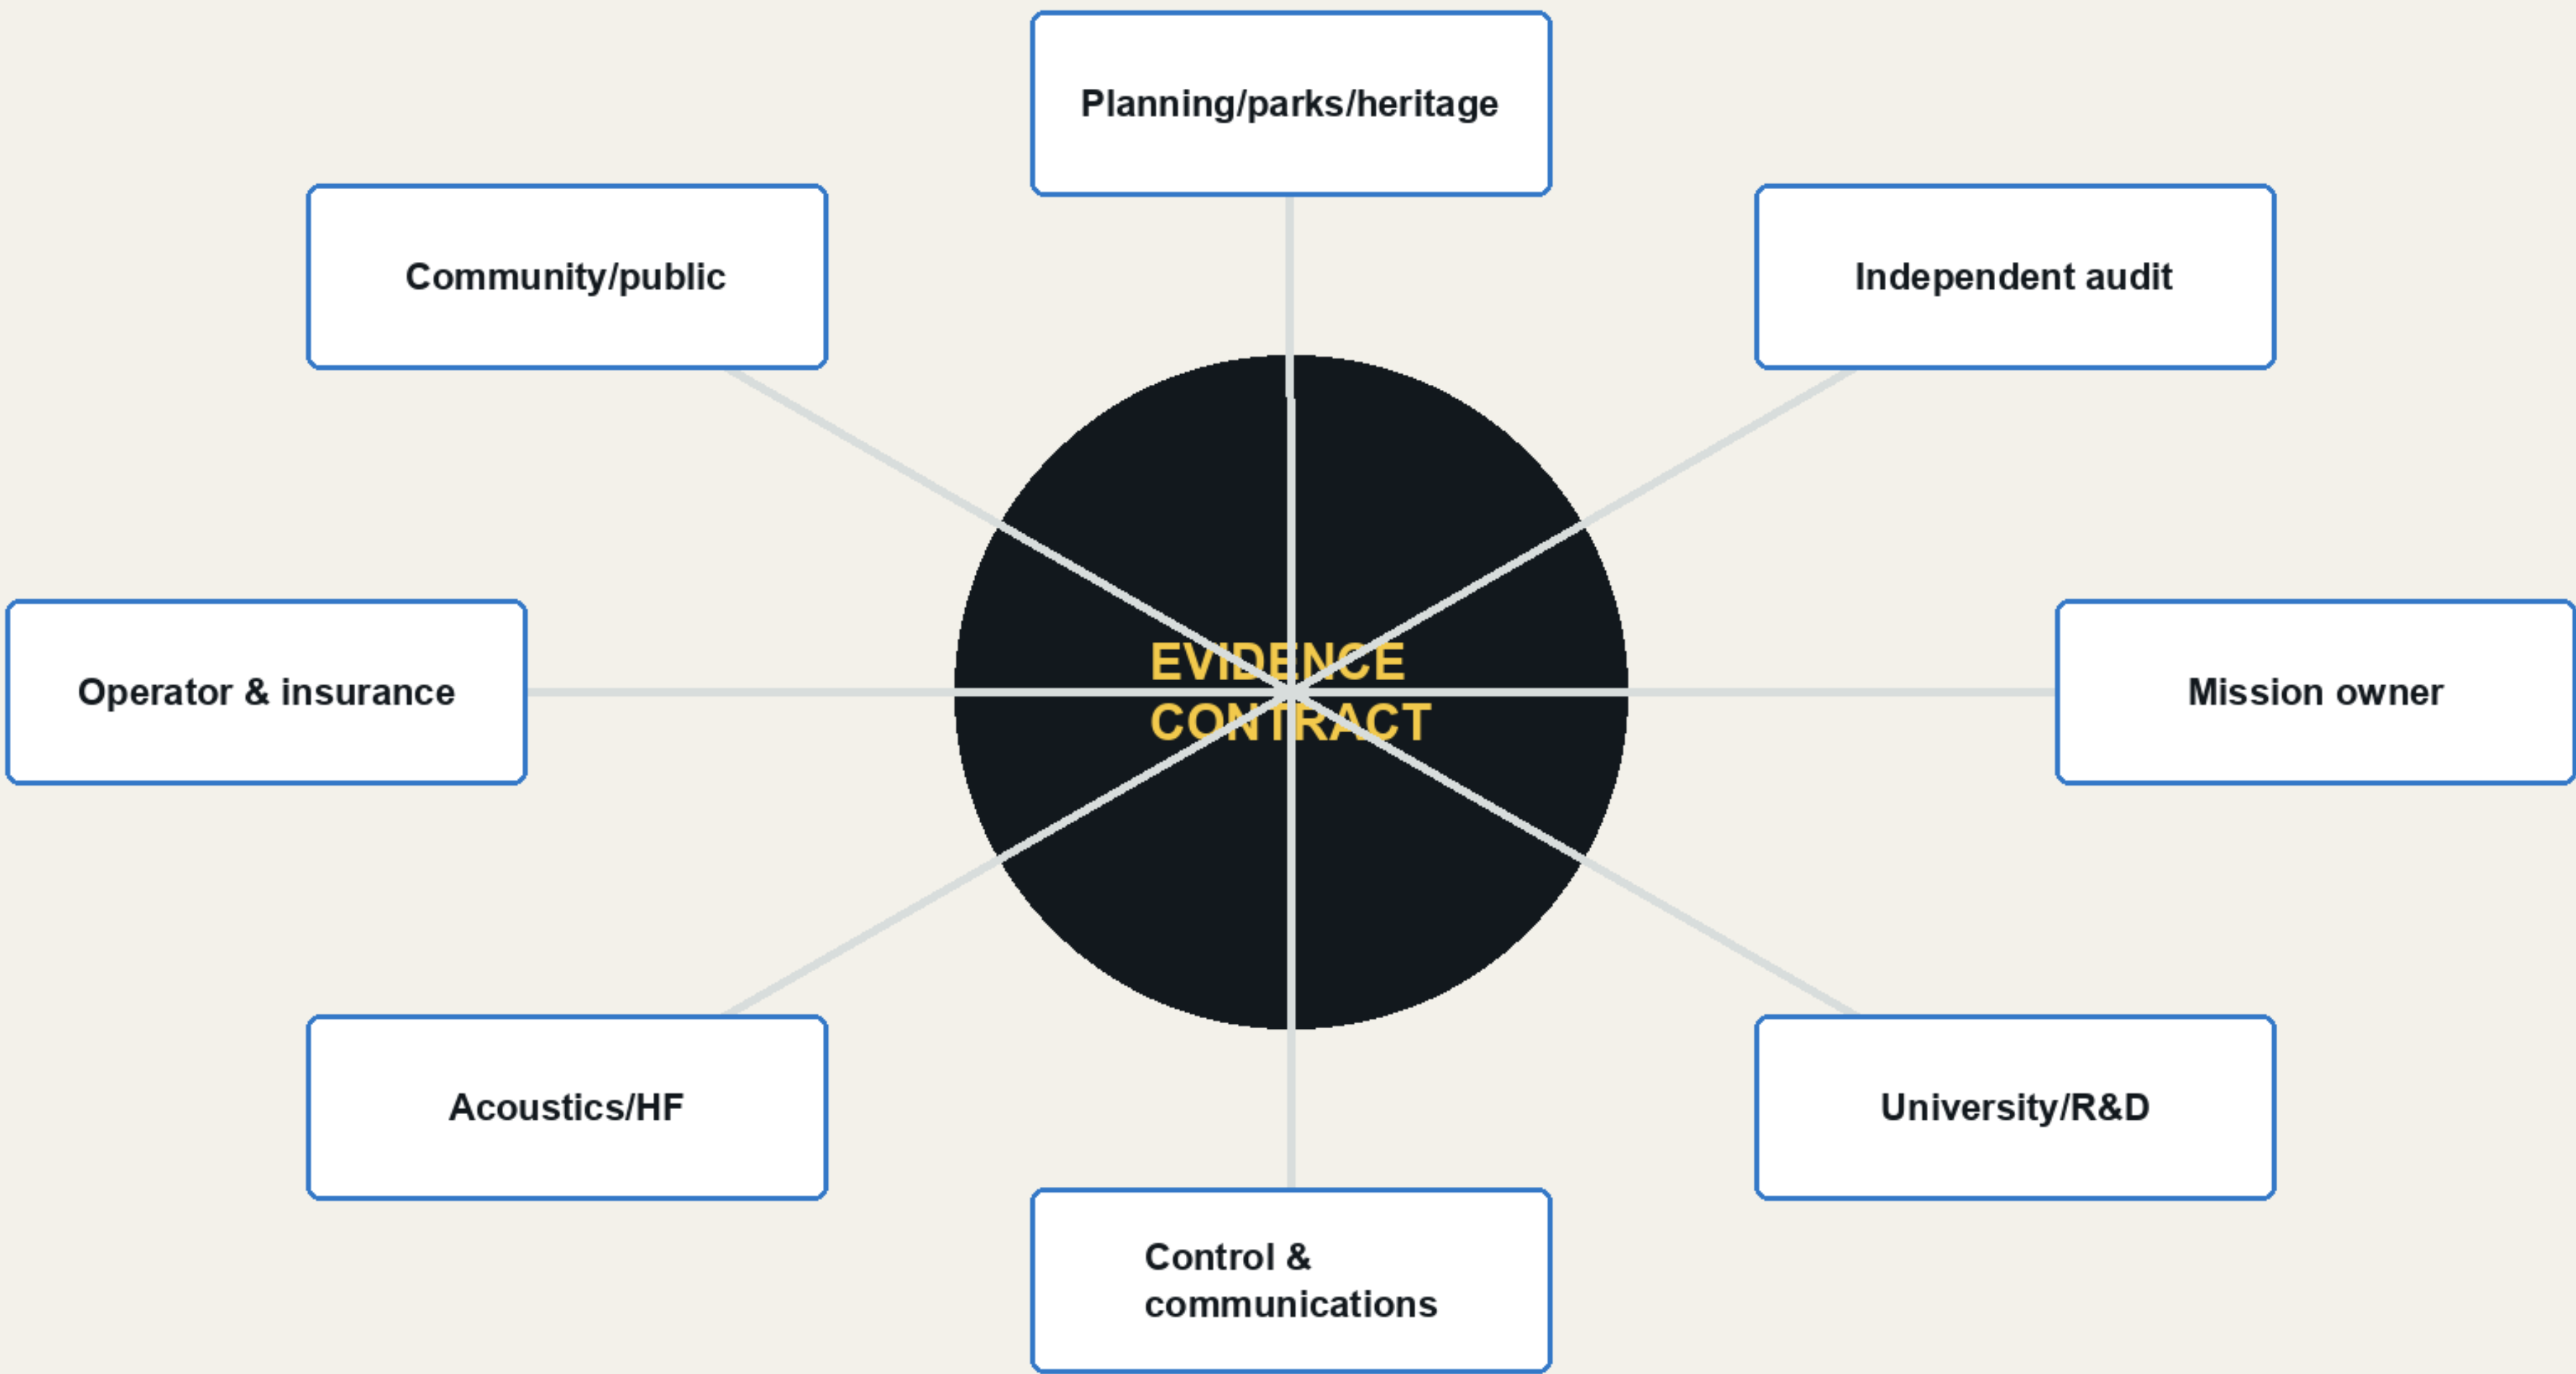

- Routine food delivery and advertising flights
- Passenger, sightseeing, and park-entertainment flights
- Payment, brand, or event pressure cannot alter the gates

04 FACILITIES AND DIGITAL SYSTEM

need · rule · space · simulation · evidence · public mirror

Industry is an evidence interface, not a company list

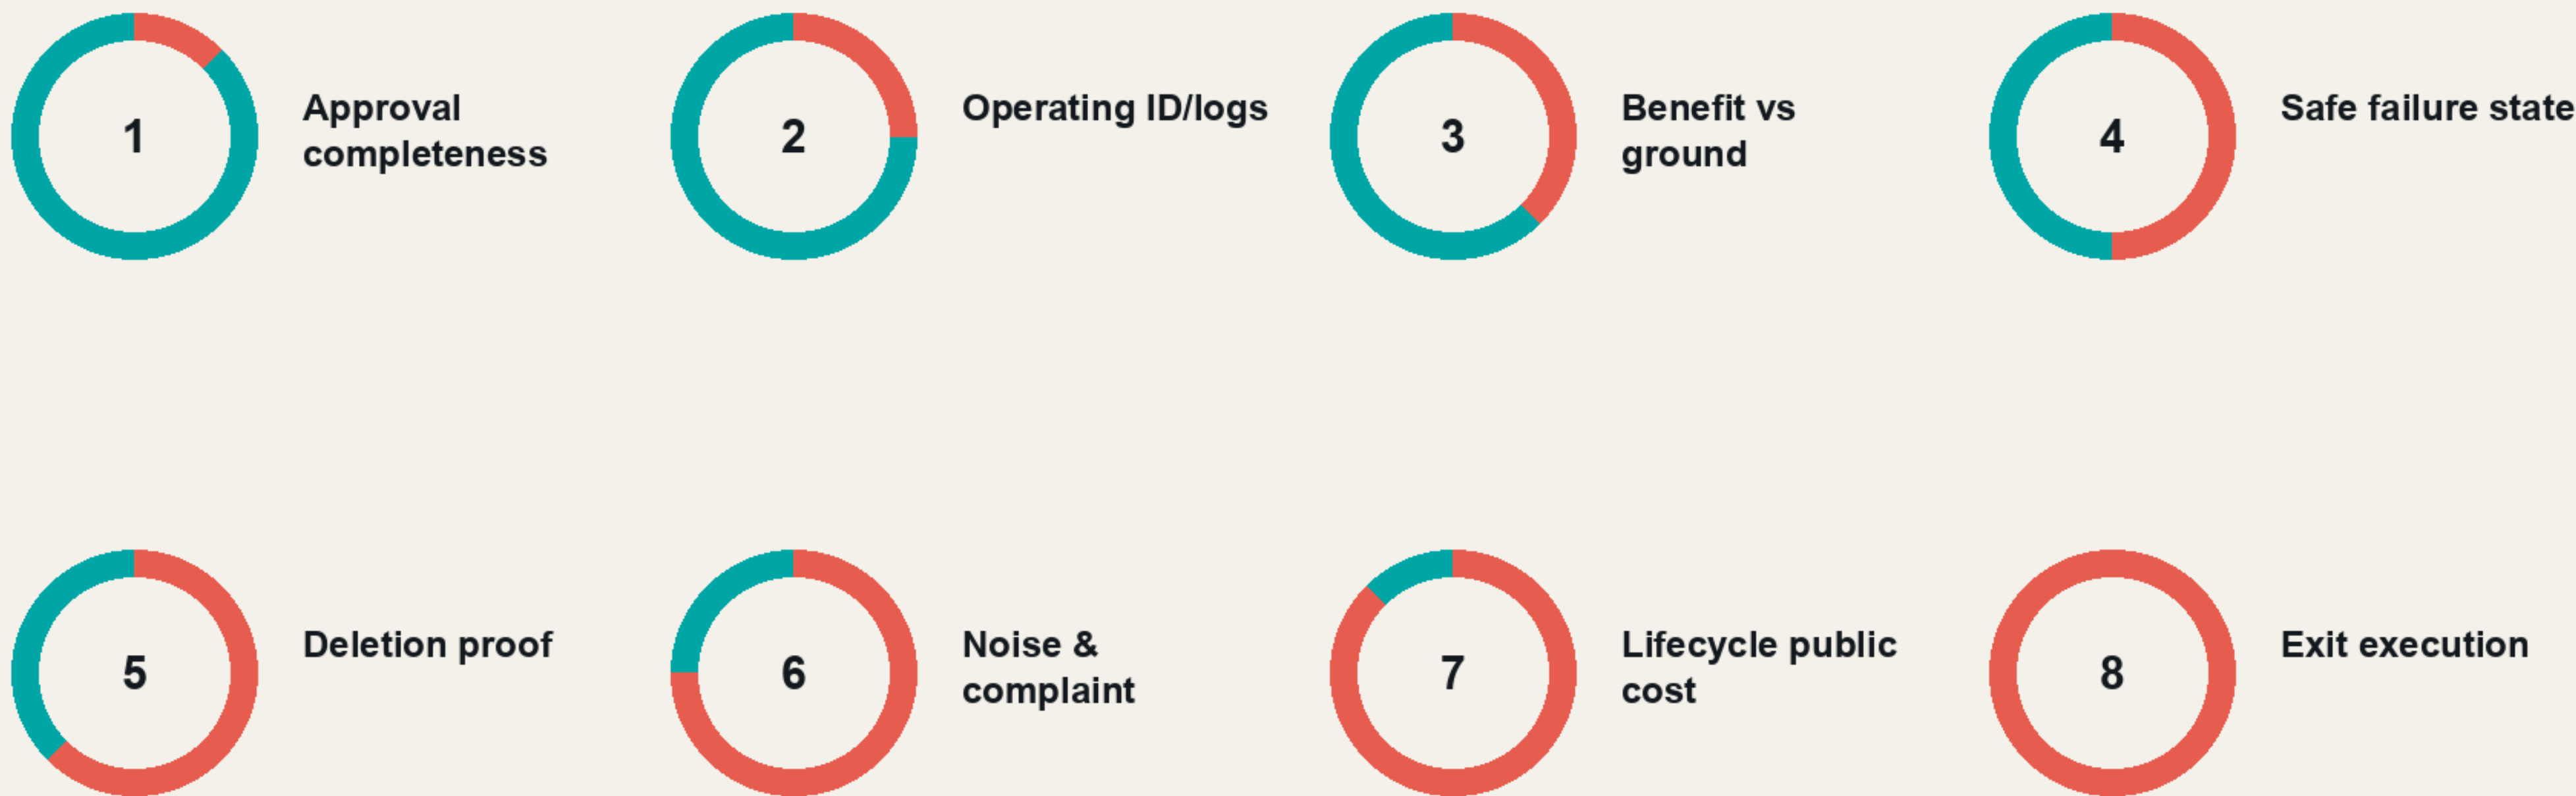

BOUNDED SKY 2.0

CONCEPT ONLY · NOT AN AUTHORIZATION OR IMPLEMENTATION COMMITMENT

Measure public outcomes, not flight counts

BOUNDED SKY 2.0

CONCEPT ONLY · NOT AN AUTHORIZATION OR IMPLEMENTATION COMMITMENT

A restrained facility hierarchy

- Build public service, digital governance, and ground recovery first
- Use separately compliant fields for testing
- No near-term Jingzhang launch point, hangar, or city airway network

Security and data discipline

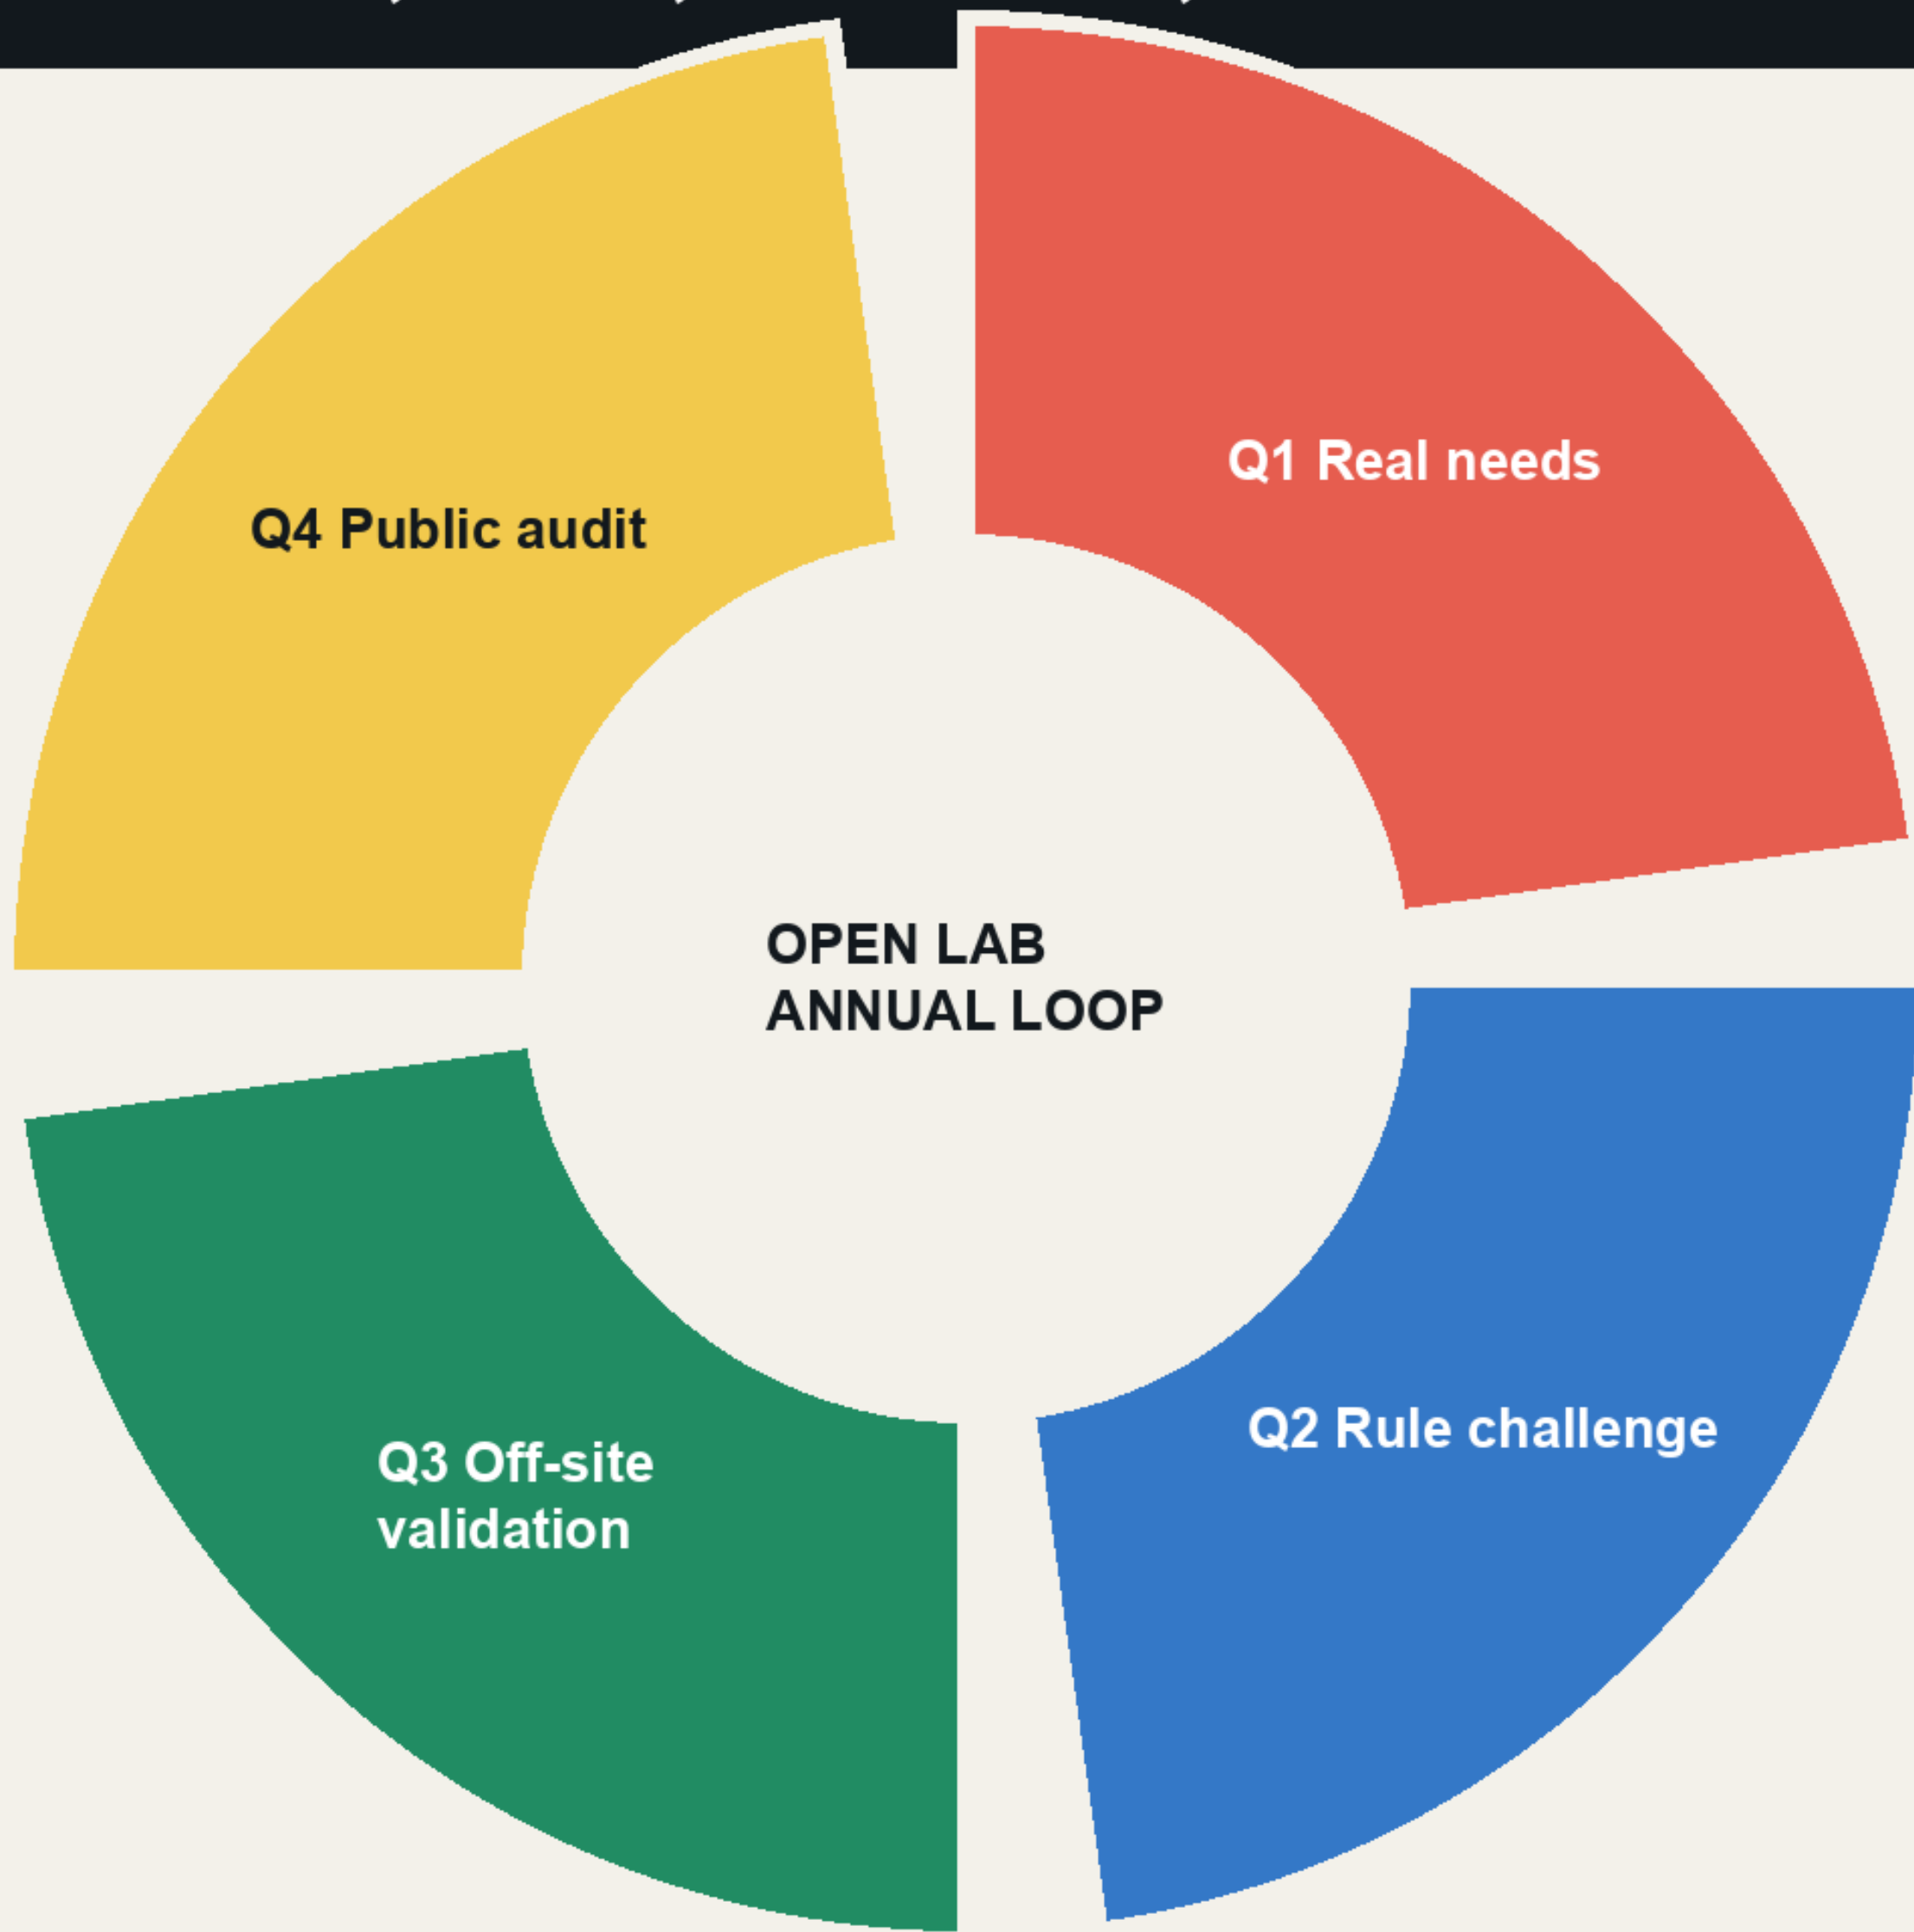

- Separate public, office, simulation, controlled, and exchange zones
- Use mission-level inventories, minimization, and verified deletion
- AI does not approve, decide appeals, or absorb human liability

05 PROJECTS, COST, AND RESPONSIBILITY

turn the concept into packages that can be scoped, bought, accepted, or stopped

Annual open lab: needs, rules, validation, audit

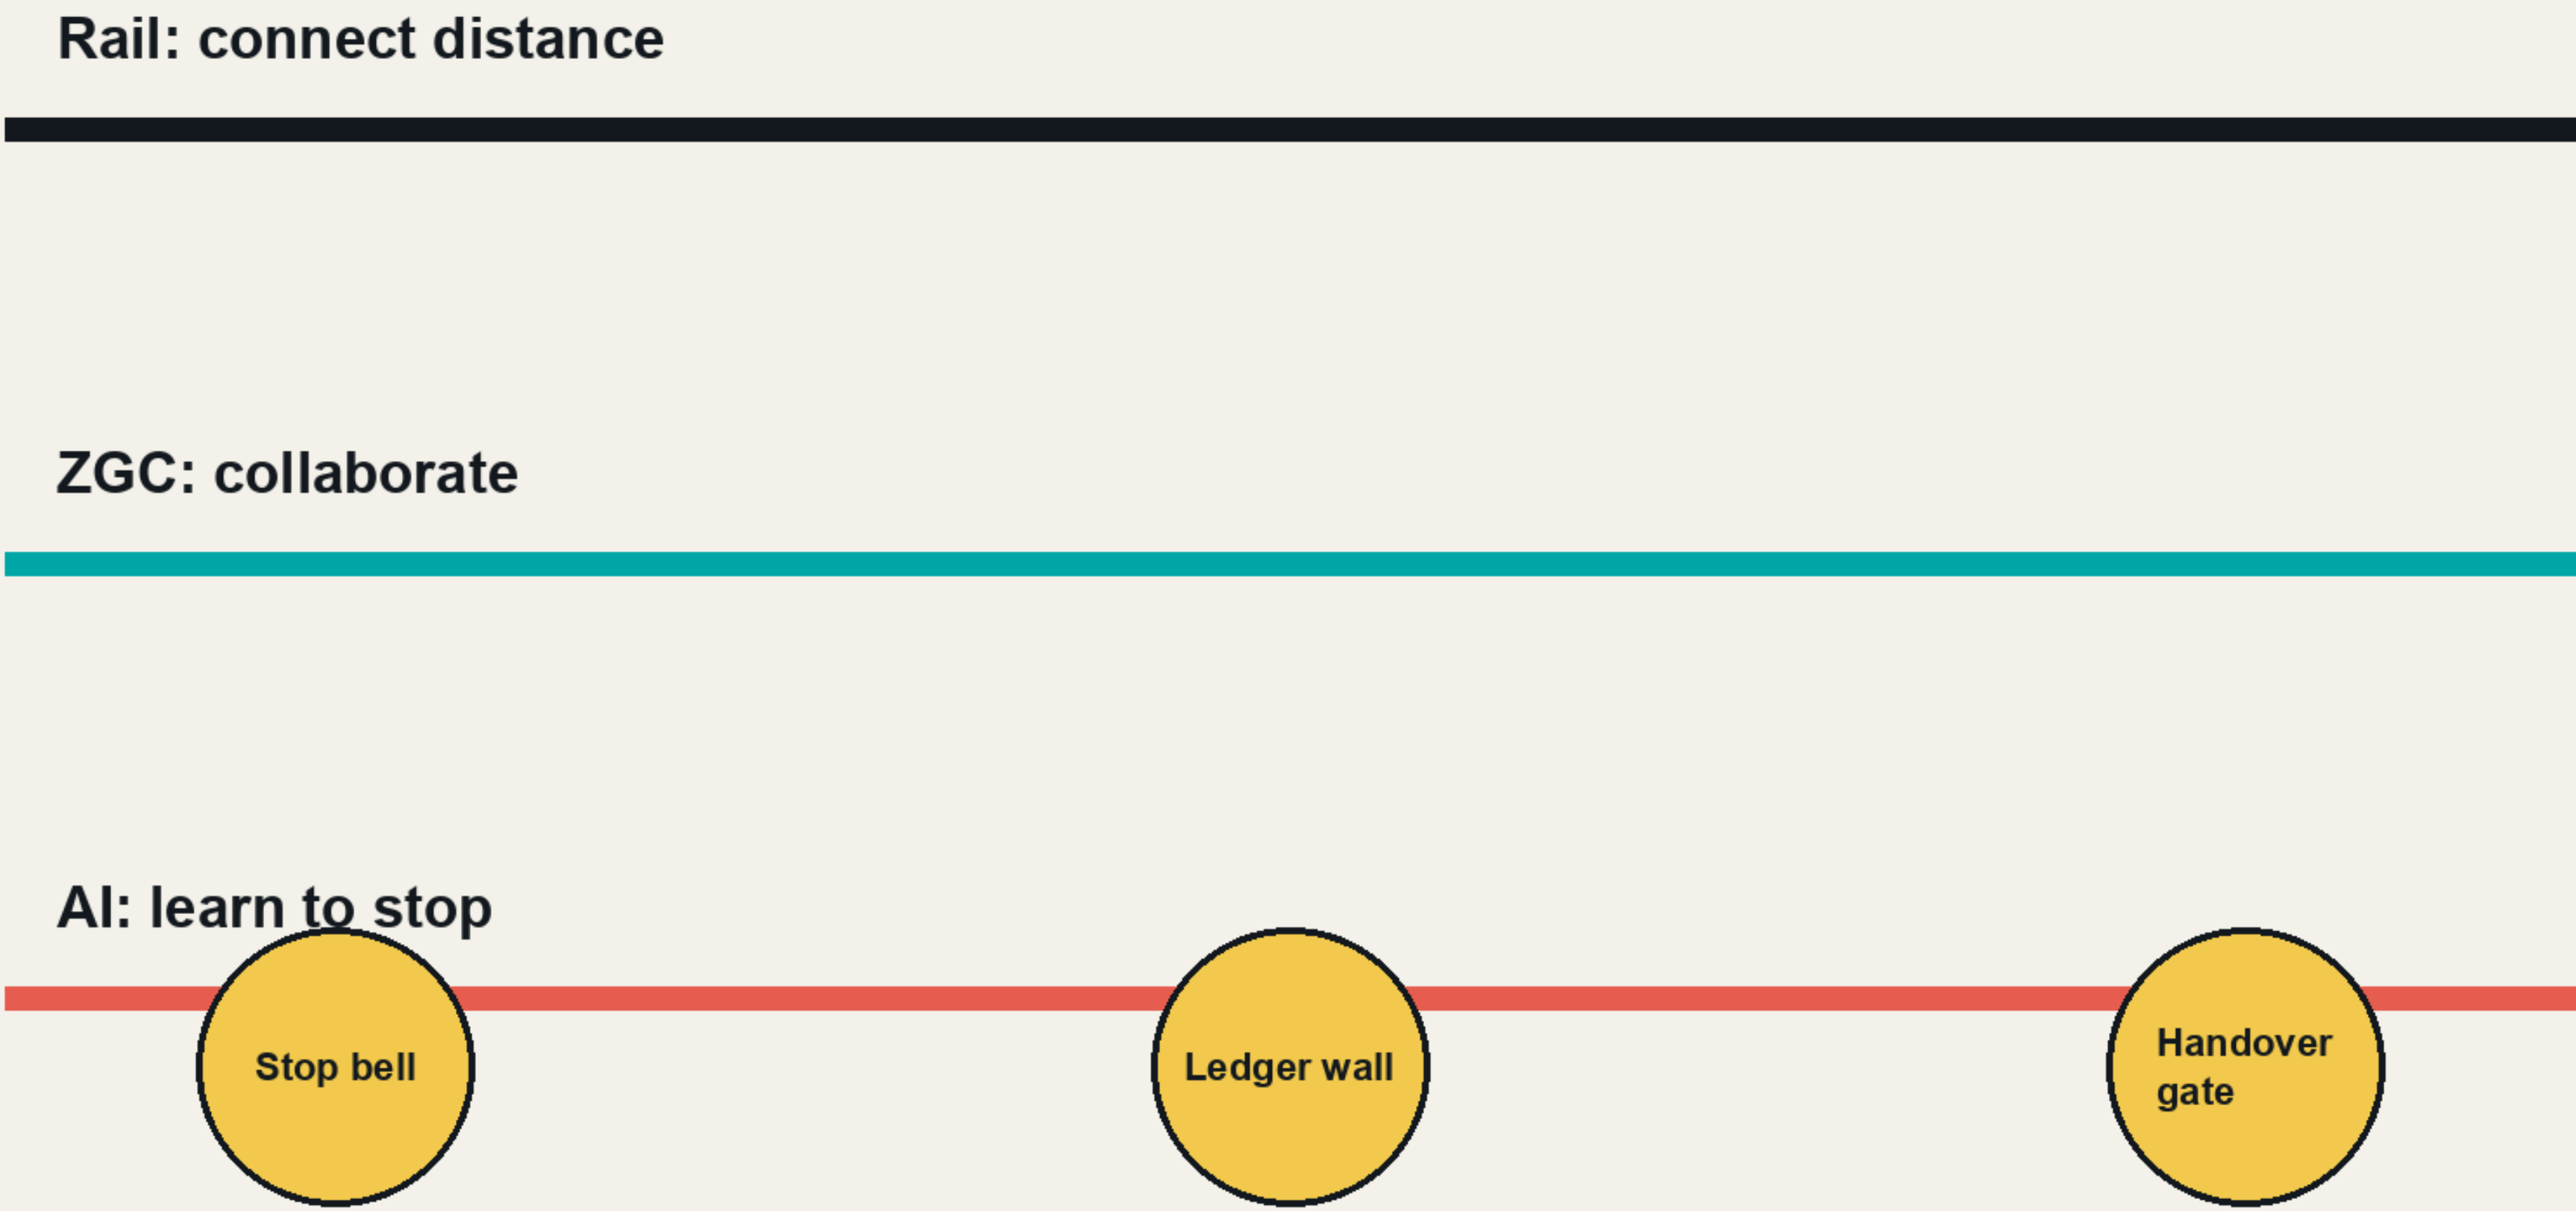

BOUNDED SKY 2.0

CONCEPT ONLY · NOT AN AUTHORIZATION OR IMPLEMENTATION COMMITMENT

Rail memory × Zhongguancun collaboration × AI responsibility

BOUNDED SKY 2.0

CONCEPT ONLY · NOT AN AUTHORIZATION OR IMPLEMENTATION COMMITMENT

Eight delivery packages

- Governance, survey, space, digital system
- Desk validation, off-site validation, participation, and exit
- Each has inputs, outputs, owner, acceptance, and stop

Lifecycle procurement discipline

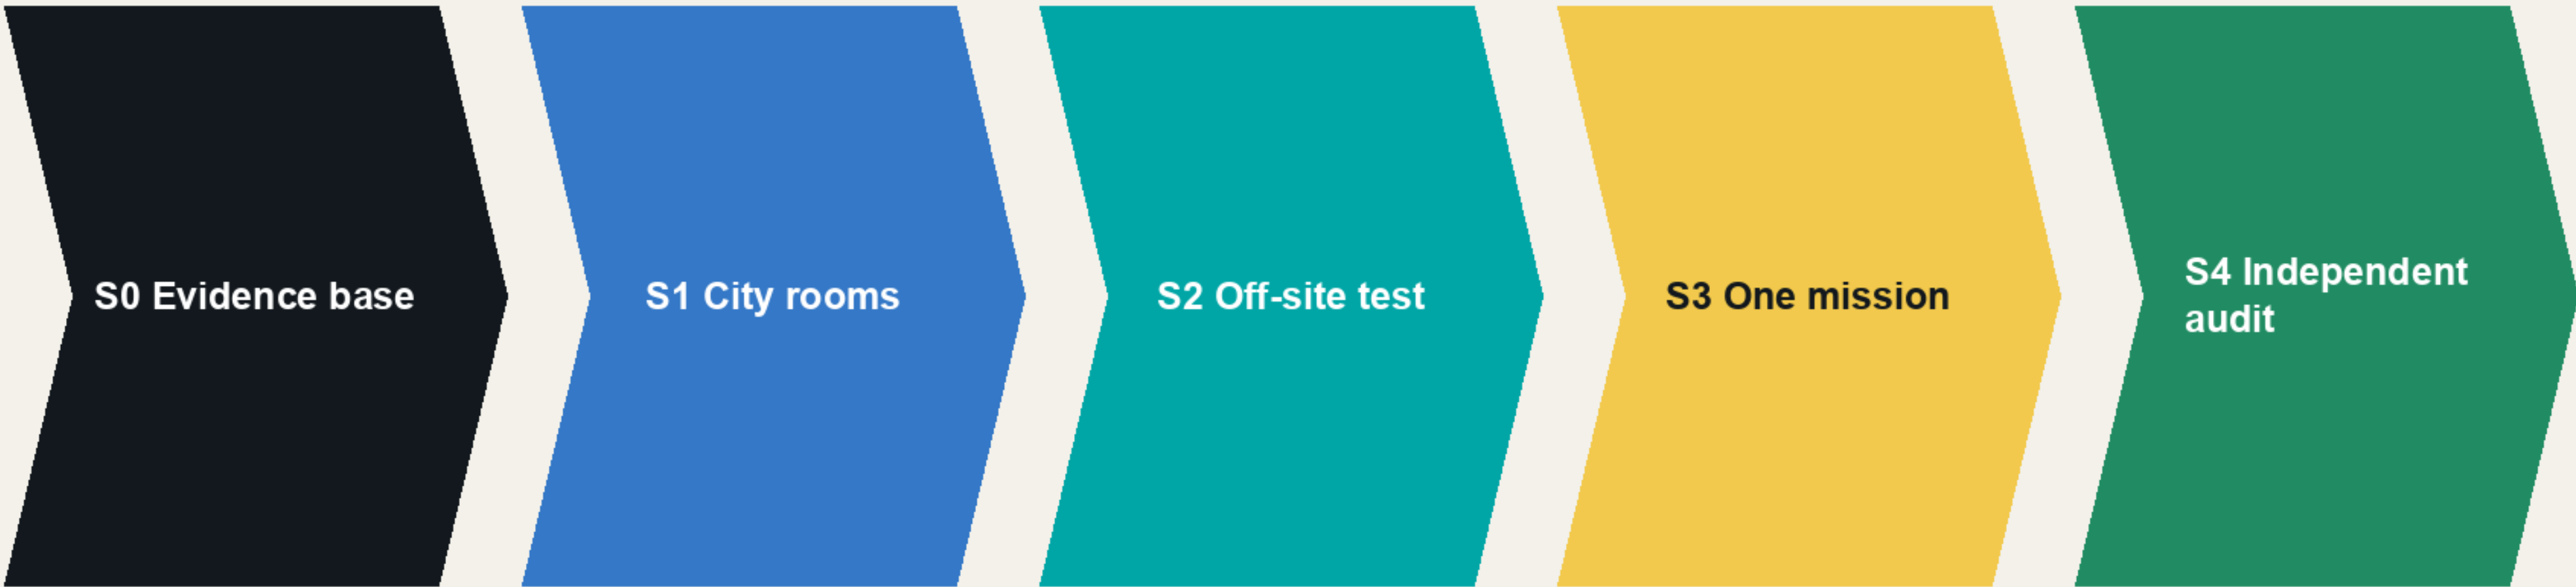

- Count capital, fixed, mission, risk, migration, and exit costs
- Separate packages and independent acceptance
- Public funds do not subsidize unnecessary commercial flight

06 PHASING, METRICS, AND EXIT

there is no automatic promotion: continue, narrow, convert, or exit at every gate

Five evidence stages, each with an exit

BOUNDED SKY 2.0

At every stage: continue / narrow / exit

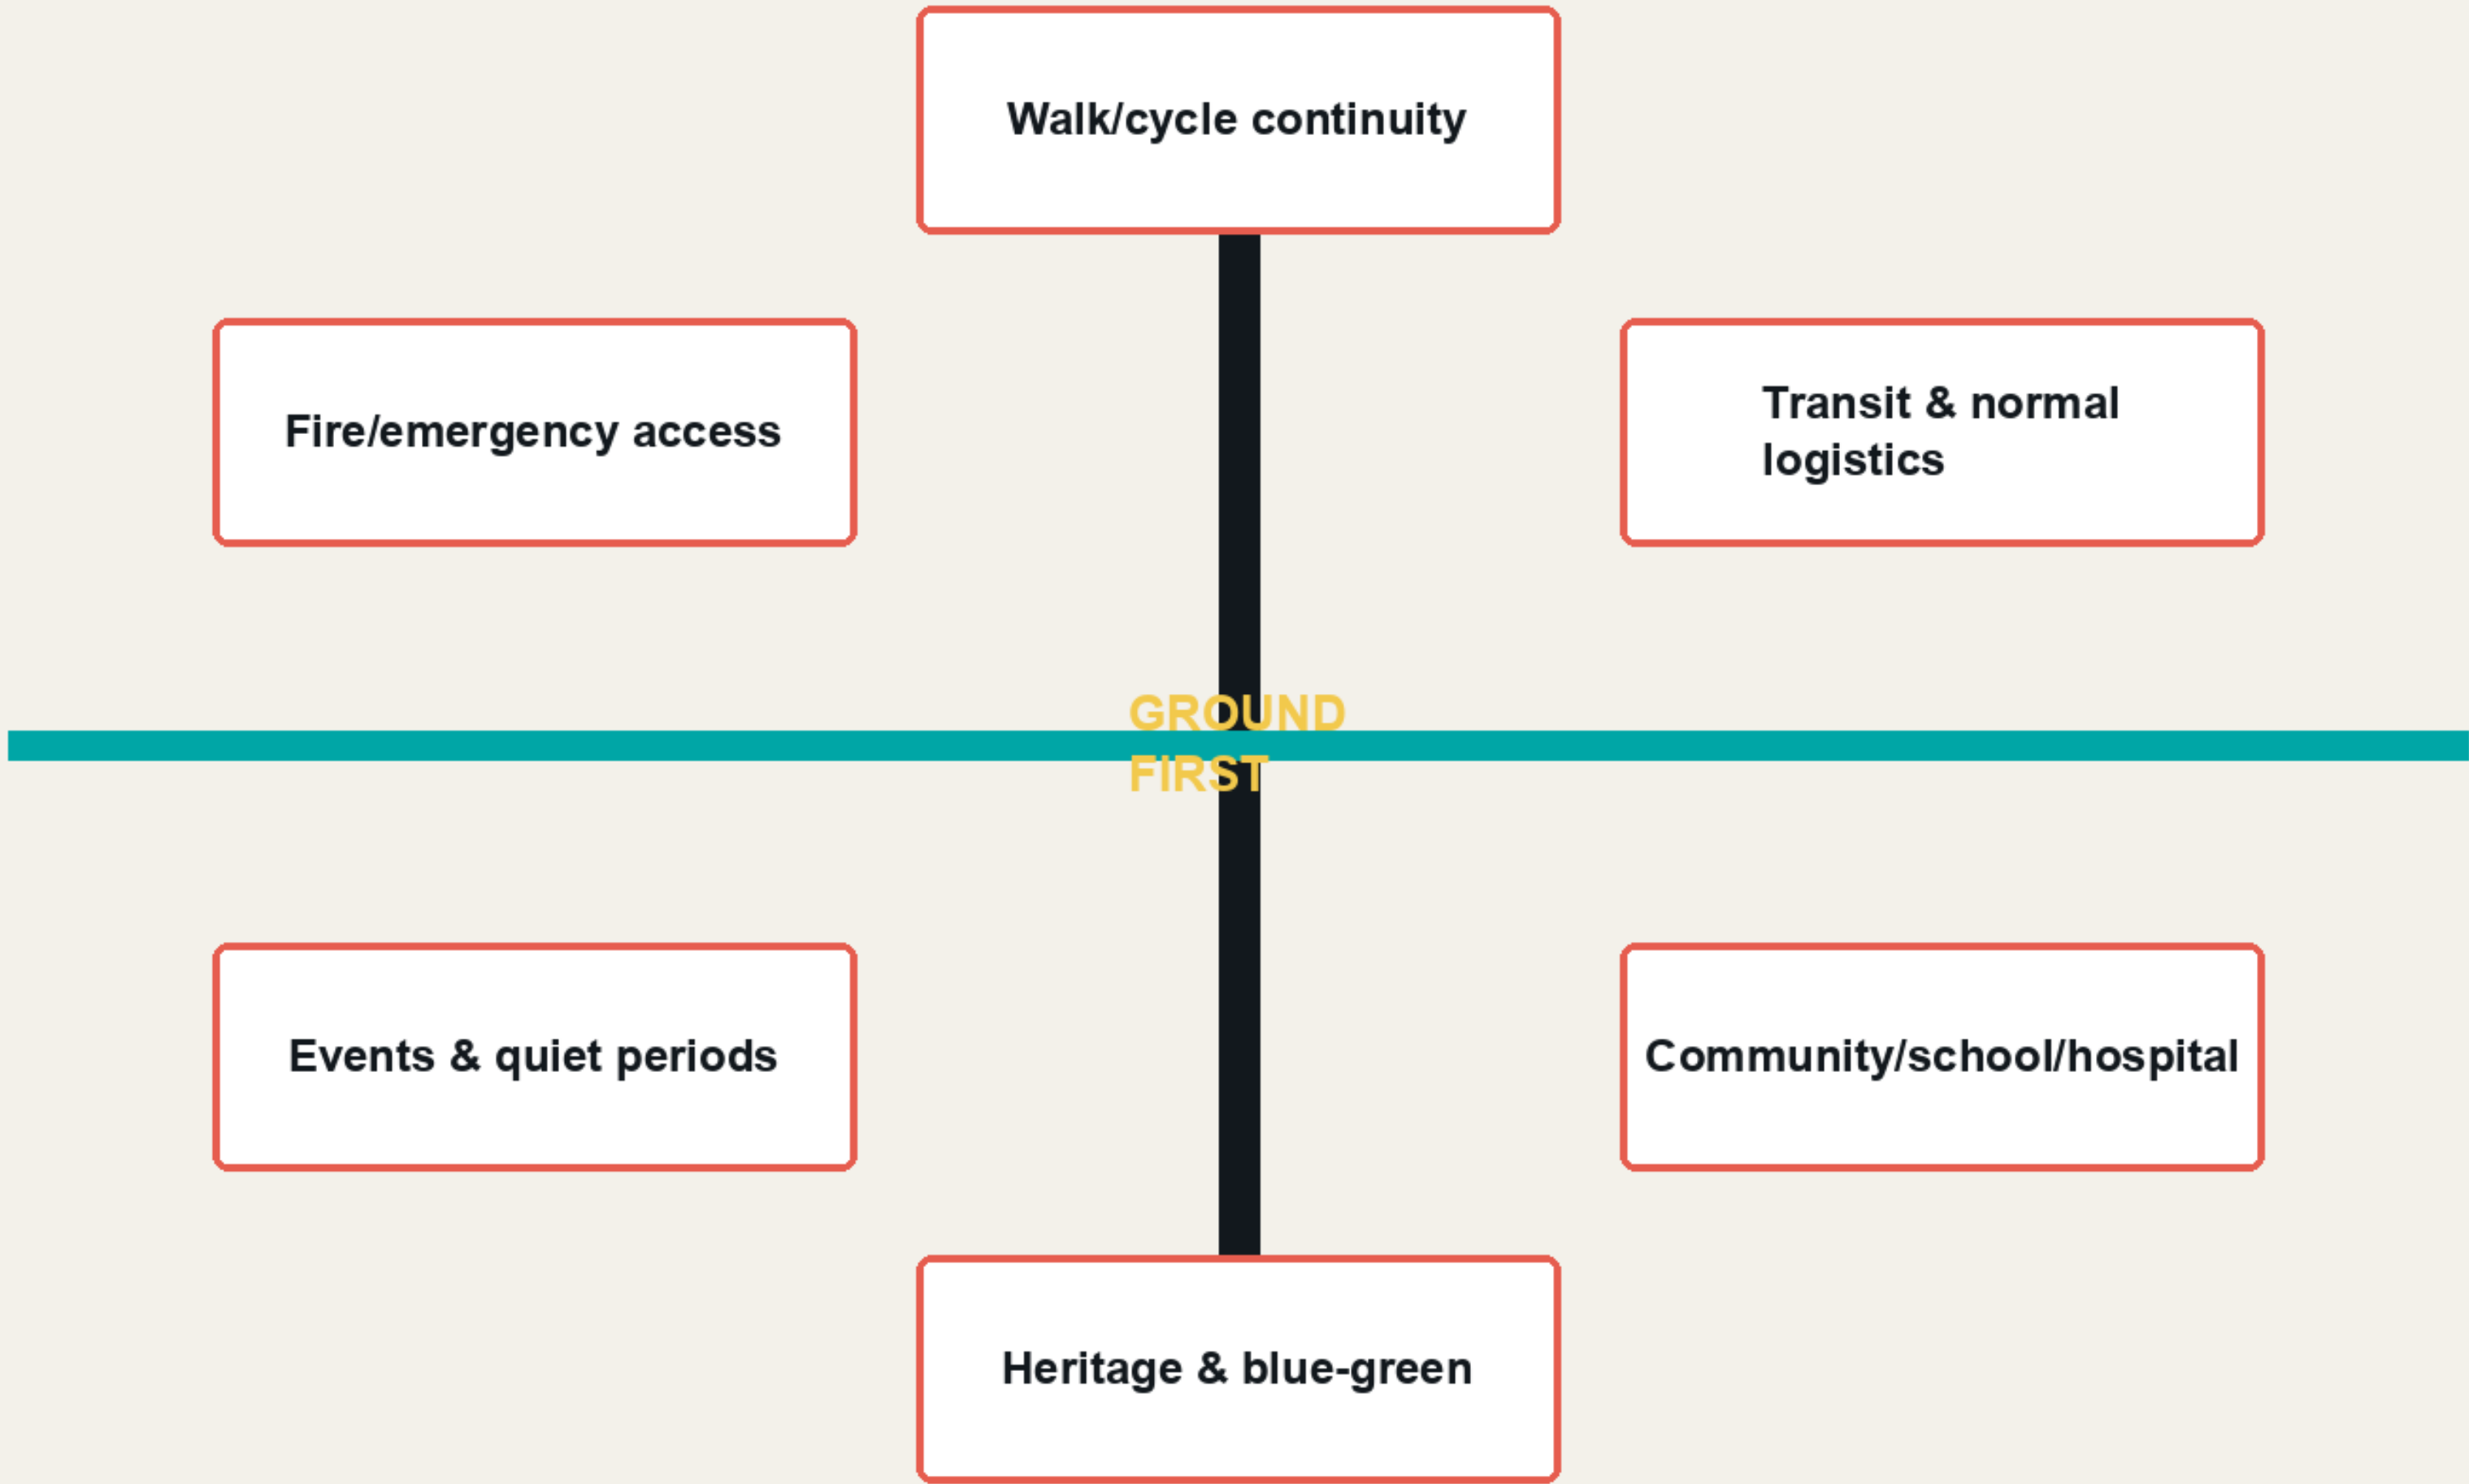

CONCEPT ONLY · NOT AN AUTHORIZATION OR IMPLEMENTATION COMMITMENT

Stage-gated delivery

- Verify → compile → reversible fit-out → off-site test
- A real mission is considered only after case-specific approval
- Annual review compares public result, ground service, risk, and cost

Map ground rights before discussing one mission

BOUNDED SKY 2.0

CONCEPT ONLY · NOT AN AUTHORIZATION OR IMPLEMENTATION COMMITMENT

Success is not more flight

- Refusing an unnecessary task is a valid result
- Flights, devices, and visitors are not core performance
- Space converts, data migrates, and contracts terminate
