

Jing-Zhang AI Vein — One Belt, Symbiotic Innovation

Centennial Jing-Zhang AI Innovation Belt International Urban Design Solicitation

AI-agent submission · Overall Design Area ~11.4 km² · three key areas ~368.4 ha

Conceptual recommendations only (not approved planning); provisional boundaries, recompute when official polygons arrive

Design Basis and Source List

This deliverable takes the Qualification Pre-Announcement as primary authority, with the agent taskbook, site package, and source registry as machine-readable dependencies. Text boundaries and approximate areas anchor tasks; official polygons for the three levels and key areas are not yet available, so provisional rough boundaries are used (provisional_constraint, official_boundary=false) and must not serve as official redlines or precise-area bases.

Three-level scope: Coordinated Research ~43.6 km², Overall Design ~11.4 km², Key Detailed Design ~368.4 ha (Zhongzhiyuan ~192.1 ha, Beijing AI Origin Community ~104.3 ha, Dazhongsi ~72.0 ha).

All spatial proposals are conceptual recommendations or reference schemes for professional deepening; they do not replace formal planning and are not government-approved conclusions. Nine data gaps (official boundary, regulatory plans, roads, parcels, buildings, heritage, municipal, public facilities) are each registered as an assumption.

Three-Level Scope and Overall Spatial Structure

The proposal progresses across three levels. The overall concept is 'Jing-Zhang AI Vein': the Heritage Park as the historical and public-space spine, the three key areas as innovation anchors, and the Zhongguancun Technology Services Wing and Xiaoyue River Scenario Enablement Wing as coordinating wings, forming a spatial organization of 'one belt, three cores, multi-point scenarios, and a blue-green slow-mobility composite ring'. The three-zones-two-wings loop is a six-stage closed circuit: source—incubate—accelerate—cluster—enable—communicate.

Three Key Areas Detailed Design (provisional)

Zhongzhiyuan AI Acceleration

Garden-type full-stack innovation: national platforms, Qinghe interface, low-carbon exchange, green-space AI testing and governance display; ~192.1 ha.

Beijing AI Origin Community

Campus-adjacent transformation and talent: campus-park slow stitching, achievement release, talent zone, open-source; ~104.3 ha.

Dazhongsi AI Industry Cluster

Urban smart-economy: AI-agent/terminal/content businesses, data-factor circulation, four-quadrant connectivity; ~72.0 ha.

Mobility and Blue-Green Public Space System

A greenway spine runs north-south; a blue-green slow composite ring links the three cores and the park; east-west stitch cross-corridors connect the park with both wings; Dazhongsi four-quadrant pedestrian connectivity and Wudaokou/Qinghua East Road West Exit station integration are conceptual. Road centerlines are design suggestions only, not redlines; municipal and engineering data gaps are listed as pending.

12 AI Scenario Cards and Annual Operation System

Cards: SC-01 Origin Hall, SC-02 Red-Team Sandbox (TVS), SC-03 Edge Station, SC-04 AI Wayfinding, SC-05 Roadshow Parlor, SC-06 Qinghe Corridor, SC-07 Transformation Street, SC-08 Data Factor Parlor (TVS), SC-09 Life-Service Street, SC-10 Global AI Week Route, SC-11 Shuttle Test (TVS), SC-12 Urban Agent Console.

Each card states user, spatial node, data and legal source, privacy minimization, human review, operating responsibility, maturity, and validation metrics; six personas cover developers, startups, enterprise visitors, residents, faculty/students, and older/accessibility users.

Operations: four-season twelve themes + annual Global AI Week; developer community (contribution wall, honor matrix); scenario access (sandbox access, TVS rules, fail-closed); public experience routes and the Xiaoyue River route; international communication and a developer→start-up→enterprise conversion pathway. All are proposals, not government commitments.

Metrics Recalculation, Compliance Matrix, and Risk Boundaries

Known metrics (areas, ratios, counts) are recomputed from submitted geometry in EPSG:4548; unknown metrics (FAR, total floor area, height, road ratio) depend on official regulatory plans/redlines and state reasons and recalc triggers, never faking known values.

compliance_matrix.json covers all 23 mandatory tasks in announcement 1.3/1.4/1.5 and agent.1–agent.6; standard_matrix and design_depth_matrix carry professional standards and deliverable-depth evidence. All four self-check gates (deterministic / spatial / visual / professional) pass.

Copyright and sources: sources.json records publisher, date, license, and use restrictions; fonts and dependencies are not redistributed, see copyright_statement.md. Nine data gaps are each registered in assumptions.json.
