

JING-ZHANG HOMEBASE

JING-ZHANG HOMEBASE

Put daily life at the base of innovation

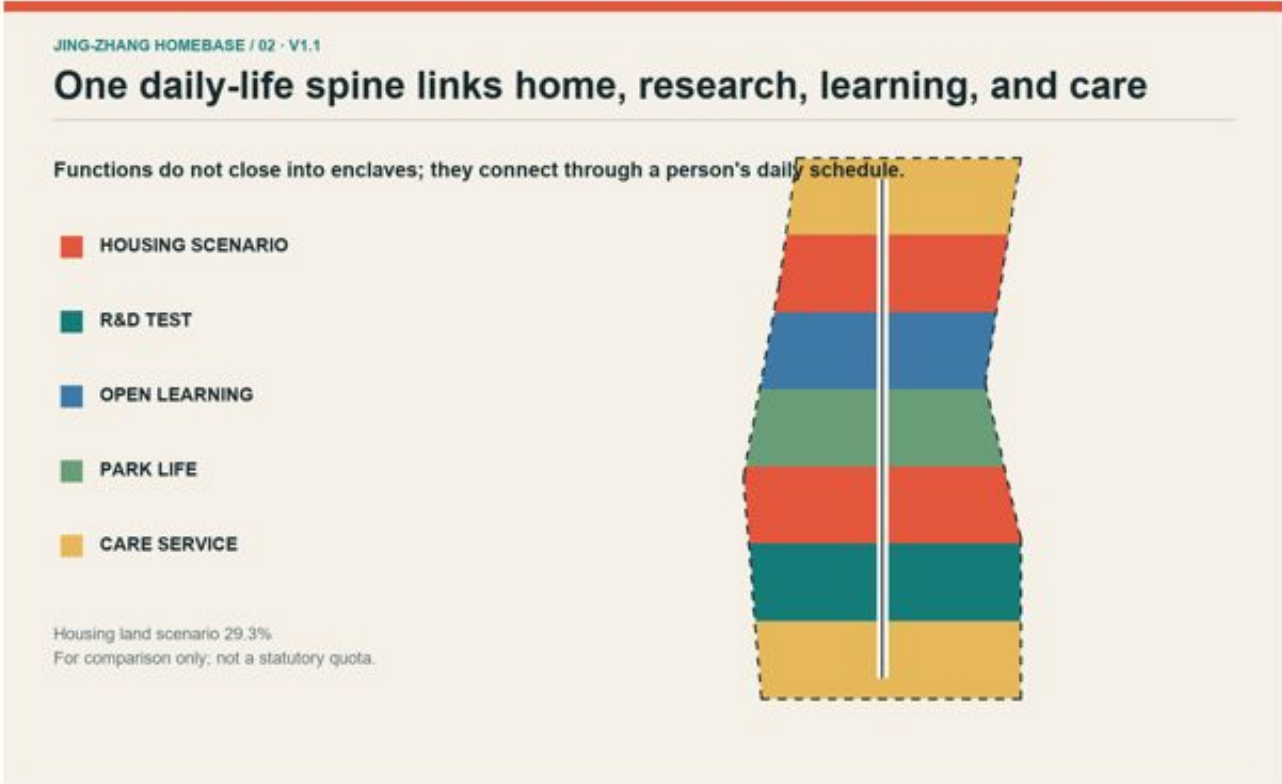

- Test: can a person complete an ordinary day here?
- Housing, care, learning, night services, and public space are innovation infrastructure.
- This is a G0 open-data concept, not a plan approval, engineering design, or public commitment.

SPATIAL STRUCTURE

One spine, three live-work segments, two service interfaces

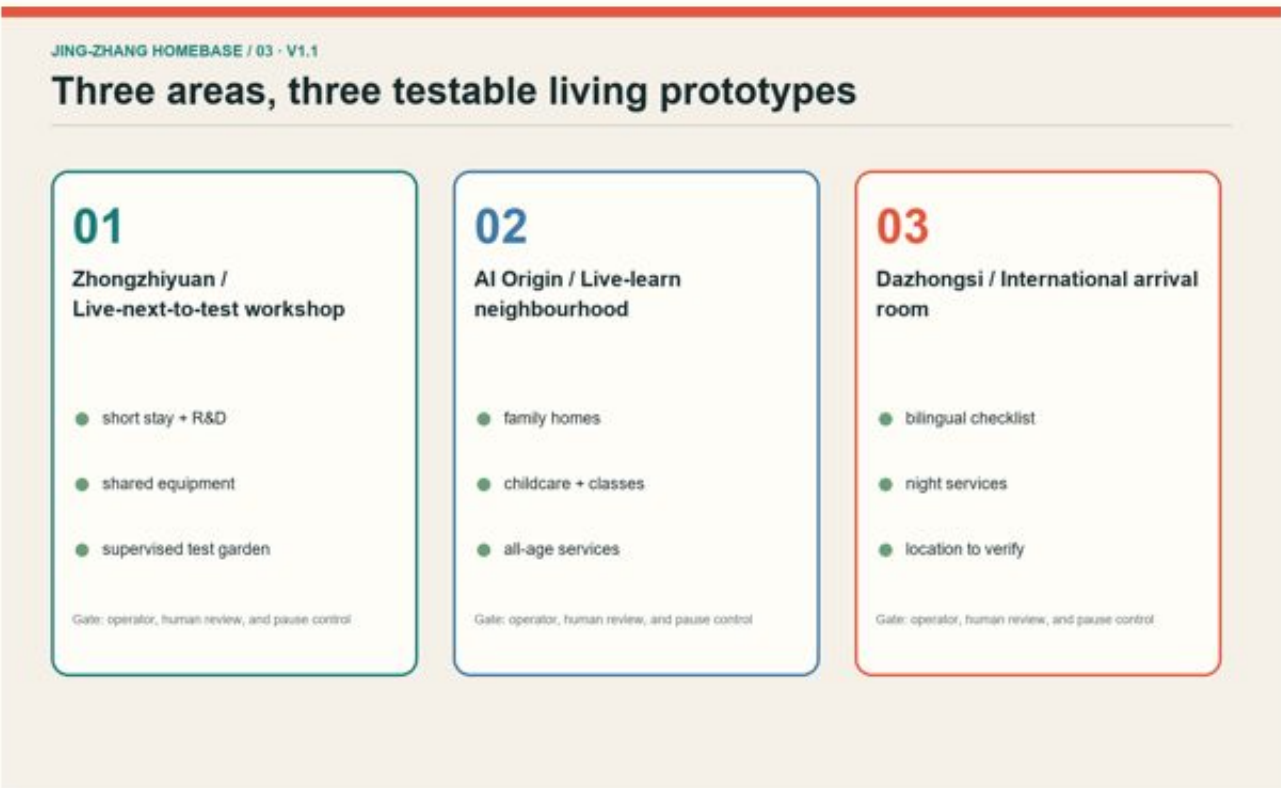

- The daily-life spine links movement, shade, essentials, and heritage reading.
- Housing alternates with research, learning, service, and park space; its share is a scenario.
- FAR, height, ownership, and retain-renovate-demolish wait for official evidence.

THREE PROTOTYPES

One goal, different daily schedules

- Zhongzhiyuan: a live-next-to-test workshop.
- AI Origin: homes, learning, childcare, and elder support form a live-learn neighbourhood.
- Dazhongsi: an international arrival room whose location requires official verification.

SIX PEOPLE, TWELVE SCENES

Every card has a human entrance and stop condition

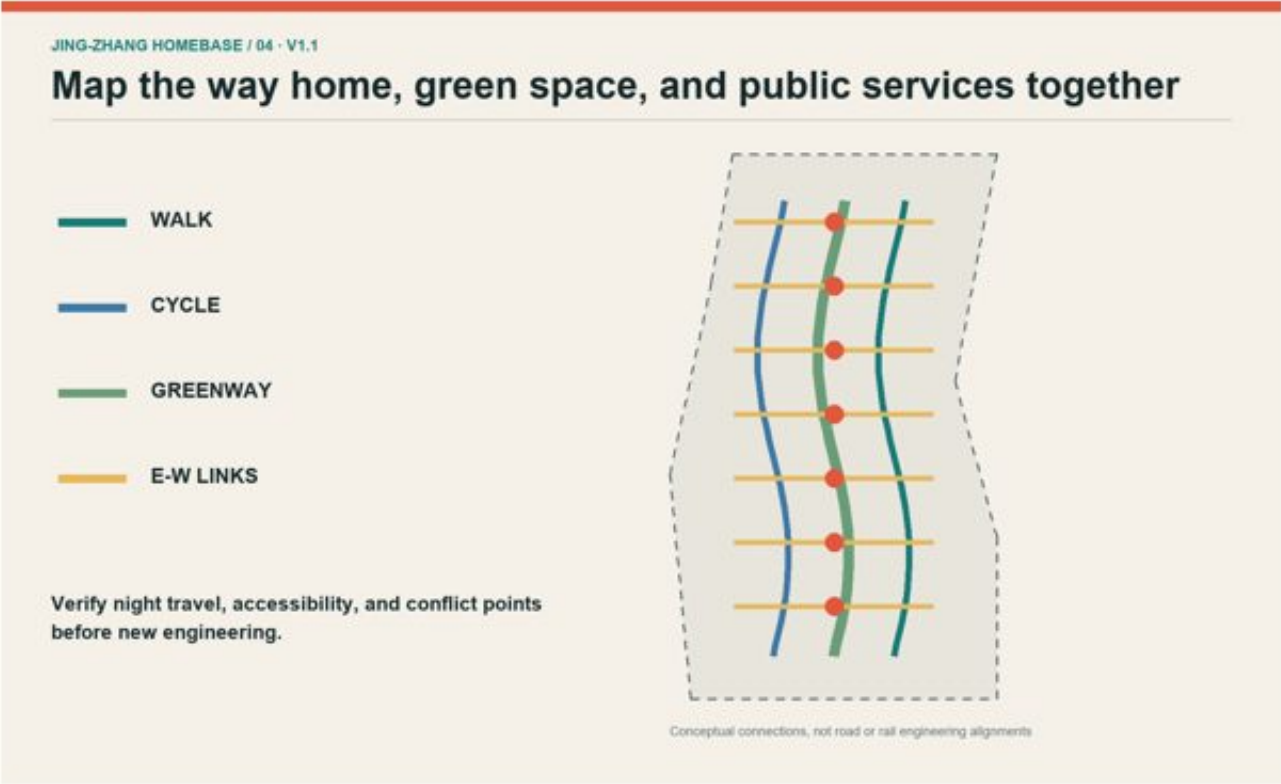

- Serve researchers, start-ups, night workers, families, older residents, and international visitors.
- Three tests: equipment booking, enclosed low-speed delivery, and environmental comfort sensing.
- Basic services require neither faces nor precise traces; high-impact decisions stay human.

JING-ZHANG HOMEBASE

MOBILITY + BLUE-GREEN

Make the way home work first

- Walking, cycling, and greenway lines connect seven east-west interfaces to verify.
- Public courtyards combine rest, play, older adults' walks, history, and low-intensity trials.
- Concept lines never replace road, rail, bridge, tunnel, or utility engineering.

PROJECTS + ACCOUNTABILITY

Test reversible work before permanent work

- Begin with field and accessibility audits, six-persona interviews, a night-service map, and temporary stations.
- Space, data, staffing, maintenance, and complaint ownership are named before a pilot.
- AI organises evidence and options; people and competent professionals make final decisions.

FOUR GATES

No evidence, no escalation

- G1: field, users, operator. G2: official controls, ownership, and multi-disciplinary review.
- G3: small, pausable, staffed pilot. G4: public-value, safety, cost, and equity review.
- Phasing is conditional order, not a date, budget, or investment promise.

RISK + NEXT STEP

Keep unknown values unknown

- The highest risk is mistaking provisional geometry and scenarios for public decisions.
- Next: fieldwork, resident-worker-operator input, official data, then professional deepening.
- Figures, metrics, sources, assumptions, and matrices remain traceable in the package.
