

JING-ZHANG IN PHASE

One spine • three stations • four gates

ONE SPINE • THREE STATIONS • FOUR GATES

G0

Research evidence

owner / expiry / residual / exit

G1

Controlled test

owner / expiry / residual / exit

G2

Public trial

owner / expiry / residual / exit

G3

Accountable operation

owner / expiry / residual / exit

ARC LENGTH = EVIDENCE STAGE (90 / 180 / 270 / 360 deg)

PROVISIONAL: official_boundary=false; not a redline, station anchor or approval

4 GATES

An AI city is not defined by automation everywhere, but by how a capability becomes legible, tested, taken over and retired. Four evidence gates turn that path into public infrastructure: each one names an owner, an expiry, a residual and an exit.

HOW TO READ

The map shows the phase public spine and three key areas on provisional geometry. Leader lines name the station and its phase job, never a precise parcel.

PHASE RING

A ring's arc length encodes the evidence stage: G0 is 90 degrees, G3 is 360. The same mark carries the same meaning across every plate.

BOUNDARY STATUS

official_boundary=false. The PROV-KEY-003 Dazhongsi anchor is unresolved; everything is re-anchored together once official polygons arrive.

NEAR-READ EVIDENCE

G0 RESEARCH EVIDENCE

owner / expiry / residual / exit

G1 CONTROLLED TEST

reversible • bounded • stoppable

G2 PUBLIC TRIAL

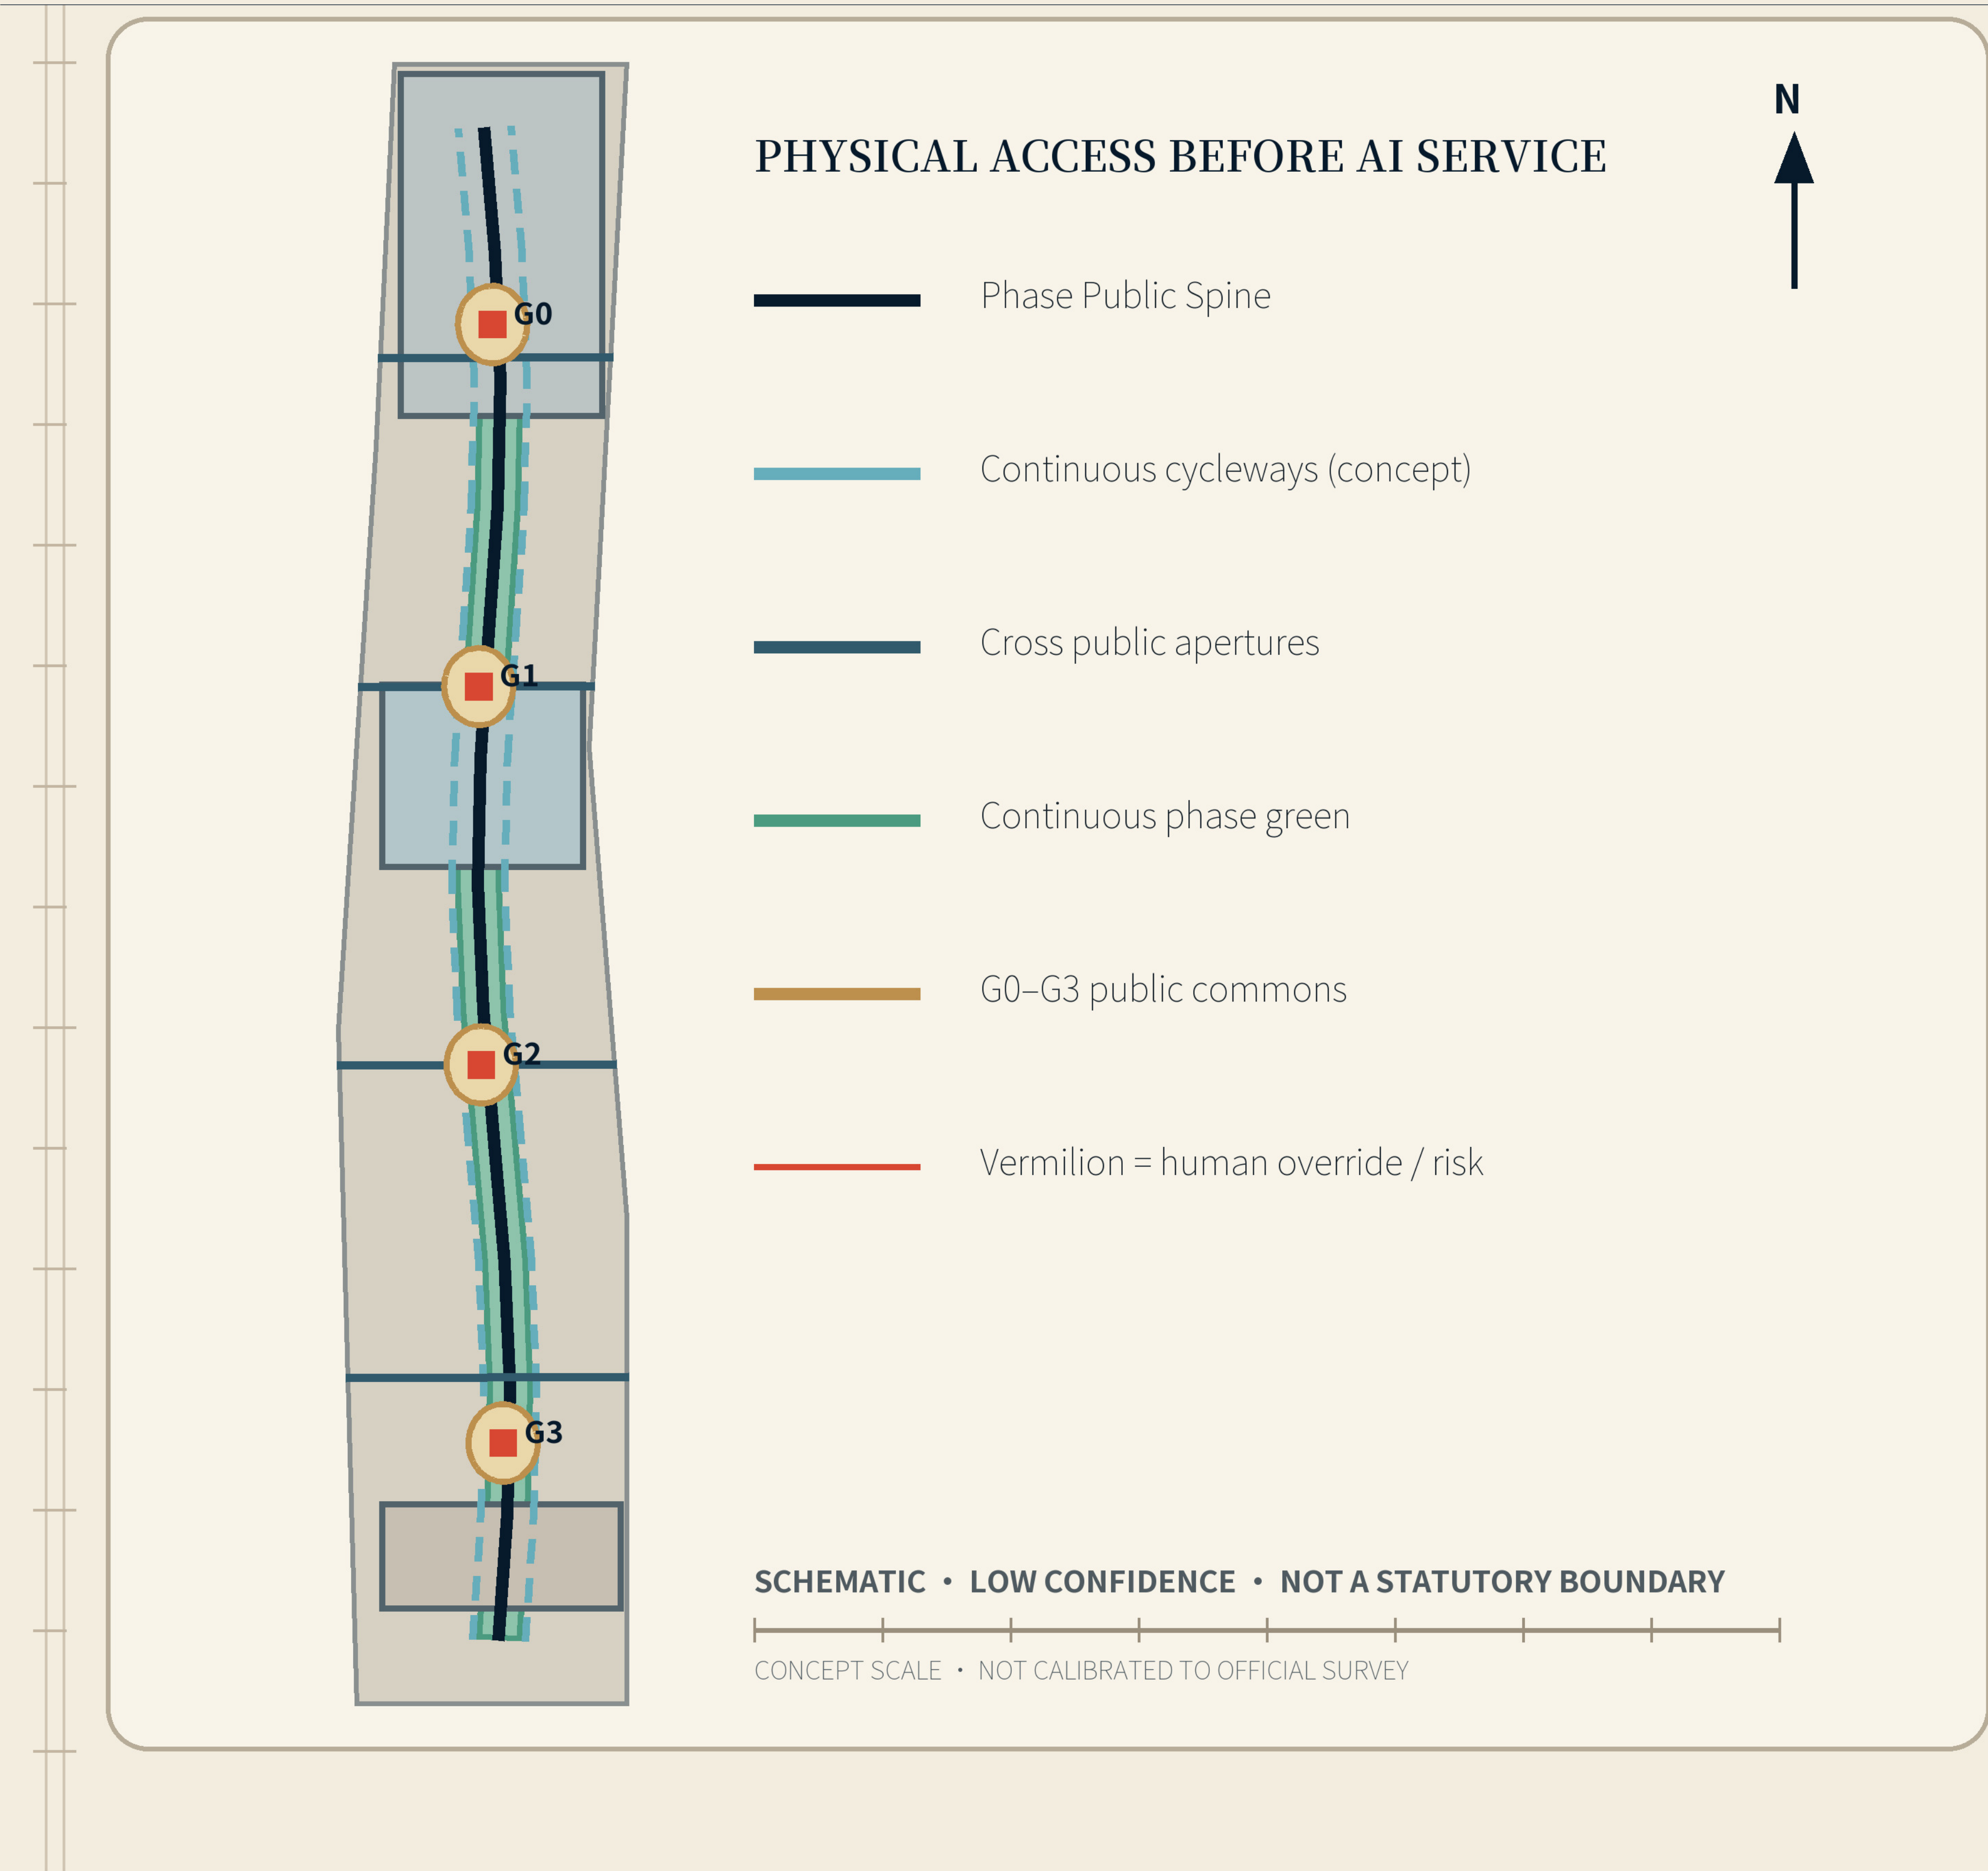

opt-in • exit • human alternative

G3 ACCOUNTABLE OPERATION

residuals published • demotion allowed

PUBLIC REALM FIRST

Repair surfaces, crossings, shade and rest before intelligent navigation

01 Continuous surface

manual audit first

02 Wheelchair + crossing

navigation cannot replace repair

03 Shade + rest

usable offline

04 Human service

every model can be taken over

Vermilion = human override and stop points, never decoration

4 AUDITS

Six phase land-use bands run in parallel along the corridor so a closed campus cannot push the public spine to its back. Slow mobility and blue-green are everyday infrastructure: continuous surfaces, wheelchair gradients and crossings, shade and rest, usable when the network is down. Vermilion marks only human override and emergency stop.

FOUR THINGS FIRST

Continuous walking surface; wheelchair gradient and crossings; night lighting and perceived safety; delivery and logistics conflict. No intelligent dispatch before these four manual audits are done.

THE ONLY USE OF VERMILION

Vermilion marks only human override and emergency stop. Never a heading, a number or a decoration. Where it appears, a person is accountable and the system can be stopped.

WHEN THE NETWORK IS DOWN

Public space stays usable in rain, power loss and network loss. Printed, telephone and on-site human alternatives always remain.

NEAR-READ EVIDENCE

G0 RESEARCH EVIDENCE

owner / expiry / residual / exit

G1 CONTROLLED TEST

reversible • bounded • stoppable

G2 PUBLIC TRIAL

opt-in • exit • human alternative

G3 ACCOUNTABLE OPERATION

residuals published • demotion allowed

THE UNKNOWN STAYS UNKNOWN

Residuals are published, never converted into a score

Observable public outcome

detour / wait / false alert / labour

Model / system diagnosis

find a pattern, not the truth

Professional + user review

advance, narrow or remove

Misalignment across the three levels blocks advancement. Residuals are published, never converted into a score or ranking.

KNOWN

12

scenarios

7

personas

7

cases

4

gates

UNKNOWN

statutory FAR / height / density / redlines / utility capacity

Known values are recalculated from package geometry in EPSG:4548 or counted explicitly. Unknown values are never estimated or interpolated.

AWAIT OFFICIAL DATA • FAIL CLOSED

3 READINGS

Observable public outcome, model diagnosis and professional review must be read against each other; misalignment blocks advancement. Known values are recalculated from package geometry in EPSG:4548. Statutory FAR, height, density, redlines and utility capacity remain unknown, and official-geometry-dependent professional scoring stays blocked.

KNOWN

12 scenarios, 7 personas, 7 official-source cases, 4 evidence gates. Spatial values are recalculated from package geometry in EPSG:4548.

UNKNOWN

Statutory FAR, height, density, redlines and utility capacity remain unknown. This package never estimates, interpolates, or passes a design quantity off as a statutory metric.

WHAT THIS MEANS

Package completeness and content review are ready. That is not eligibility for official-geometry-dependent professional scoring, and a merge is not an award, an implementation or an endorsement.
