

Spatial Evidence Atlas: One Spine, Three Anchors

Submitted GeoJSON rendered as a concept map with key-area insets and phase traceability.

图例 / Legend

- Land-use concept
- Green network
- Public interface
- Design massing
- Slow-mobility spine
- Phase-1 discussion boundary

Evidence chain

- SITE-001 + 4 land-use polygons
- 3 provisional key-area polygons
- Road, green, public, building, phase layers
- Nodes are design actions, not approved projects

PROVISIONAL CONCEPT GEOMETRY ONLY - recompute all area and relationships after official polygons.

Land-Use and Concept Massing Structure

Four submitted land-use concepts are read together with green space, public interface, road, massing, and phase trace.

图例 / Legend

- AI R&D / parks / service / community
- Concept building footprint
- Public activity interface
- Continuous green space
- Phase-1 discussion trace

Control boundary

- Known: topology and submitted geometry
- Unknown: FAR, height, redline, ownership
- Required before statutory use: official controls and surveys
- Recompute all metrics after official polygon replacement

Concept land-use only - FAR, height, setbacks, ownership, and statutory controls are unknown pending official data.

Three Key-Area Detail Insets

Local crops show only the submitted concept layers; statutory redlines, ownership, and building survey remain pending.

PROVISIONAL KEY-AREA GEOMETRY ONLY - do not use as parcel or approval evidence.

Mobility, Blue-Green, and Public-Service Spine

One submitted slow-mobility corridor connects three key areas, public interfaces, and reversible pilot nodes.

图例 / Legend

- Submitted slow-mobility corridor
- Continuous green space
- Public experience interface
- Concept massing
- Phase-1 trace

Operational safeguards

- No personal trajectory collection
- Human review before routing updates
- Offline alternative route and appeal channel
- Pause if accessibility complaints cluster

Concept route only - road redlines, station engineering, and accessibility audit require official base data.

Brand System: Railway Axis + Open Nodes + Civic Loop

A generated concept identity for an open-call package. It is not a registered mark and needs clearance before rollout.

JZ / open civic intelligence

Name

Jing-Zhang Agent Commons

Chinese

京张智能体共创公地

Story

railway memory + open-source culture + civic AI

Use

wayfinding, contribution wall, event route

Rights

generated geometry; rendered system fonts only

Concept identity only - no third-party marks, logos, photos, or proprietary fonts are used.

Regional Coordination: Two Wings, Five External Nodes, Six Case Transfers

The diagram records transferable mechanisms and resource flows, not a claim of formal partnership or geographic control.

Case transfer mechanisms

- Kendall: campus-enterprise proximity
- Station F: integrated start-up service
- 22@: Zhongguancun tech-service wing
- Waterfront: data-governance boundary
- DDP: civic landmark operation
- Shenzhen Bay: cluster + waterfront

University source → open collaboration → safety governance → enterprise conversion → public experience → global communication
Xiaoyuehe scenario wing

External nodes are collaboration references only; no external boundary or approved partnership is asserted.

Ten Scenario Cards: Data, Model, Operator, Review, Exit

Every scenario is a proposed, reversible service with data minimization and a human decision point.

01 Open release hall
public agenda / operator / appeal

03 Edge test stop
energy status / ops review / stop

05 Roadshow room
voluntary brief / host review / remove

07 Conversion street
opt-in needs / university review / exit

09 Life-service street
non-diagnostic prompt / staff review / disable

02 Safety sandbox
authorized model / expert review / pause

04 Accessible navigation
aggregate breaks / resident review / withdraw

06 Low-carbon corridor
equipment state / facility review / rollback

08 Data salon
public catalog / curator review / archive

10 Global AI route
event count / safety review / cancel

TEST

TEST

TEST

All scenarios are proposals, not approved services. Use only authorized and non-sensitive data.

Implementation Matrix and Annual Operating Loop

Six concept projects are staged with accountable actor types, approvals, measurable checks, risks, and exit conditions.

Project	Phase	Actor	Prerequisite	KPI	Risk	Exit
JZ-01	0-18m	Transport+parks	road/safety	breaks fixed	redline	unsafe
JZ-02	0-24m	Parks+water	flood review	open edge	flood	ecology conflict
JZ-03	1-3y	University+street	rights/process	conversion events	rights	resident objection
JZ-04	1-3y	Rail+transport	station/utility	walk link	utility	feasibility fail
JZ-05	0-2y	Operator+district	energy/security	service SLA	energy	safety fail
JZ-06	annual	Community+firms	event/copyright	participation	rights	feedback low

Q1 open call → Q2 co-creation week → Q3 public test day → Q4 global AI week → Q5 audit & archive

Problem → intake → compliance screen → small pilot → public feedback → professional review → annual archive

This is a concept implementation framework, not a funded program, approved timetable, or governmental commitment.

Evidence, Metrics, Confidence, and Recalculation Trigger

Known values are reproducible from submitted layers; regulatory and operating values remain explicitly unconfirmed.

Metric	Value	Confidence	Reproducible source
site_area_sqm	11,412,825 sqm	medium	site_boundary.geojson
green_ratio	12.34%	medium	green_space / boundary
public_space_ratio	7.33%	medium	public_space / boundary
building_footprint_area_sqm	310,807 sqm	medium	buildings.geojson
key_area_count	3	high	key_areas.geojson
floor_area_ratio	unknown	unknown	official control pending

Trigger: organizer releases official SITE_BOUNDARY / KEY_AREA polygons + regulatory / base data → regenerate 9 layers, metrics, maps, PDFs, HTML, and all checks.

Provisional geometry supports concept review only. Never read these as official controls or statutory statistics.
