

Twelve AI scenario cards

★ marks the four industry test-and-validation scenarios; each card states data source, privacy boundary and human review.

No.	Scenario card	Spatial host	Data source and privacy boundary	Human review
SC-01	Open-source release hall	Origin Community spine side	Voluntarily submitted public project data	Content reviewed before release
SC-02 ★	Model evaluation open day	Ring of Autonomy	Evaluation data licensed by entrants	Results confirmed by named experts
SC-03	Edge-compute post	Public service nodes on spine	No retention of user task content	Human action on abnormal load
SC-04	Walkability and accessibility navigation	Whole spine	Aggregated flows and asset status only	Findings verified on site
SC-05 ★	Low-speed delivery and inspection trial	Zhongzhiyuan loop	Onboard sensing confined to trial segment	On-site supervision each trial
SC-06	International roadshow salon	Platform Zero	Public presentation material only	Content cleared before release
SC-07	Data-factor salon	Dazhongsi east block	Compliance, authorisation, auditability	Every transaction traceable
SC-08	AI+ public service desk	Community service land	No personal profiling	Human service channel mandatory
SC-09	AI+ education open laboratory	Xiaoyuehe education frontage	Institution-authorised teaching data	Teachers approve content
SC-10 ★	Governance agent review desk	Whole belt	Public material and this package only	Agent advises; humans sign off
SC-11	Heritage narrative AI guide	Spine and kilometre posts	Cleared public historical material	Historical statements reviewed
SC-12 ★	Event-day mobility sandbox	Three scenario loops	Aggregated event flows, deleted after	Plans approved by humans

Long-term operating mechanisms

Loop Week

Once a year, one week, running simultaneously along the three scenario loops: model evaluation and standards workshops at Zhongzhiyuan, open-source release and contributor-credit extension at the Origin Community, international roadshow and AI-native consumption at Dazhongsi. The venues are the public spaces used every day; no separate

Developer community operation

A not-for-profit model informed by campus governance co-owned by a city government and foundations; three mechanisms at its core: a year-round release channel, an extendable honour record, and explicit scenario admission rules.

Scenario open operation

A scenario open-day system: each quarter publishes the list of test scenarios open to application, admission conditions, safety requirements and human supervision arrangements.

International communication and conversion

Through the roadshow salon and the annual event, a visit-display-match-advisory chain, with advisory services limited to information and carrying no policy commitment.

All of the above are operating-mechanism suggestions requiring a qualified operator; they constitute no funding, policy or investment commitment.
