

JINGZHANG: THE LAST LIGHT LINE

Night-time Basic-Service Continuity / Board 1

01 / OVERVIEW

01

THE LAST LIGHT LINE

No purchase, scan or profiling: even offline, a person can still sit, drink, use a toilet, charge, ask for human help and read the last connection.

FOUR RIGHTS

- 01 A place to stay**
Free, non-commercial and accessible
- 02 A service route**
AI and equivalent human service
- 03 A right to test**
Small, reversible and time-bound
- 04 A right to appeal**
Pause, override and obtain reasons

FIVE SEATS + ONE OBSERVER

Provisional geometry is shown as a low-contrast dashed constraint; all spatial claims require recalculation after official polygons arrive.

DATA-SRC-PROVISIONAL-BOUNDARIES-20260605

02 / SPATIAL STRUCTURE

02

One Line · Three Houses · Two Wings · Twelve Light Stations

A night-time continuity structure derived from one topology-safe provisional boundary.

DESIGN PARTITION

Land-use colors describe a conceptual design partition, not approved land-use controls, parcels, FAR or property rights.

geometry/land_use.geojson · EPSG:4326 / area EPSG:4548

03 / THREE LIT ANCHORS

03

Recover · Learn · Transfer

Three distinct interfaces keep essential service and human help visible after the last train.

TWO WINGS Zhongguancun services bring talent, IP, compliance and capital; the Xiaoyuehe wing returns ecological performance, lived experience and public feedback.

Key-area polygons remain provisional. Functions must be deepened after ownership, heritage, traffic and engineering conditions are confirmed.

JINGZHANG: THE LAST LIGHT LINE

Night-time Basic-Service Continuity / Board 2

04 / DAILY PUBLIC REALM

04

Basic Comfort Before Smart Screens

Walking, shade, water, accessibility and non-digital service are prerequisites for every AI scenario.

PUBLIC-REALM GATE

- 1 Walk**
Continuous and accessible
- 2 Stay**
Free seats, shade and water
- 3 Understand**
Visible purpose and evidence
- 4 Choose**
Human and non-AI route
- 5 Exit**
Physical stop and appeal

MAP LEGEND

- Blue-green and shade
- Concept slow-mobility link
- Free public stay
- Seat unit / scenario

Roads, water, heritage controls and exact accessibility breaks require official survey and engineering confirmation; this is a conceptual network.

geometry/roads.geojson · green_space.geojson · public_space.geojson

05 / EVIDENCE & EXIT

05

Every Pilot Carries a Seat Pass

A public claim becomes reviewable only when its geometry, metric, operator, human override and expiry are visible together.

SEAT PASS / 席签

SC-__

PUBLIC PURPOSE

What shared problem does it solve?

DATA & RETENTION

Inputs, exclusions, duration and deletion

MODEL & LIMITS

Version, known failure and valid context

HUMAN DECISION

Named operator and override point

EQUIVALENT ROUTE

Non-AI service with no penalty

PAUSE / APPEAL / EXPIRY

Physical stop, review path and end date

HUMAN-SIGNED GATES

- 1 Brief**
- 2 Rights**
- 3 Sandbox**
- 4 Field**
- 5 Review**
- 6 Adopt / Exit**

100% Seat Pass · 100% human override · 100% expiry

Spatial values are recomputed from provisional geometry. Governance coverage values are proposal targets, not claims about current performance.

metrics.json · self_check.json · assumptions.json

06 / FIRST IMPLEMENTATION SLICE

06

Inventory · Activate · Drill · Review

Three reversible pilots begin only after the real night-service baseline, operator and exit condition are visible.

HUMAN ACCOUNTABILITY

RESPONSIBLE

Future named operator

Updates service status and runs every drill

ACCOUNTABLE

Five-seat assembly

Signs activation, pause, appeal and expiry

CONSULTED

Independent professions

Planning, traffic, ecology, safety and accessibility

INFORMED

Affected public

Paper, offline and bilingual disclosure

All timings are proposal windows, not approved schedules. No pilot activates without ownership, permission, operator, safety review and an exit budget.
