

Jingzhang AI Ecological Corridor: One Spine, Three Cores, Two Wings

One Spine · Three Cores · Two Wings

This board presents the overall spatial structure and core design intent of the Jingzhang AI Ecological Corridor: the heritage spine as the AI public-space axis linking the three key areas, with two supporting wings. All boundaries are provisional rectangles; rectangle edges are not road redlines.

Fig.1 Jingzhang AI Ecosystem · One Spine, Three Cores, Two Wings

A full-stack AI innovation ecosystem along the centennial Jingzhang heritage corridor

Mobility × blue-green public space

Fig.4 Core Metrics Recalculation & Evidence

Metrics Recalculation & Evidence (geometry recomputed in EPSG:4548)

Brief sets no target value. Areas recomputed in EPSG:4548 | Statutory FAR / height controls are missing (assumption A-CONTROLS-001) | Ratios are scheme-computed; the brief sets no target values. Source: provisional public boundaries + design-derived geometry | Not official redline; for schematic design discussion only

Metrics recalculation & evidence chain

Metrics Snapshot

Site area: 11,412,842 sqm  
Green ratio: 0.250  
Public-space ratio: 0.010  
Conceptual density: 0.086  
Road network: 30,625 m  
FAR / height: to be confirmed (A-CONTROLS-001)

All boundaries are provisional; edges are not road redlines. Conceptual scheme only.
