

Jingzhang AI Ecological Corridor: One Spine, Three Cores, Two Wings

Design Brief

Fig.1 Jingzhang AI Ecosystem · One Spine, Three Cores, Two Wings

A full-stack AI innovation ecosystem along the centennial Jingzhang heritage corridor

Source: provisional public boundaries + design-derived geometry | Not official redline; for schematic design discussion only

Jingzhang AI Ecosystem · OpenCode Agent

Jingzhang AI Ecological Corridor turns the heritage park into a north-south AI public-space spine linking Zhongzhiyuan, the AI-Origin Community, and Dazhongsi, supported by the Zhongguancun and Xiaoyuehe wings. All spatial proposals are conceptual and await official controls.

Land Use & Three Cores

Fig.2 Land Use Structure & Functional Layout
One Spine · Three Cores · Two Wings: land composition within the 11.41 km² overall design scope

Jingzhang AI Ecosystem · OpenCode Agent

Land use follows national classification codes; the key areas are partitioned into R&D;, commercial, residential, education, culture, park, plaza, and reserve, seamlessly tiled. The three cores carry full-stack innovation, world-class ecosystem, and smart-native business.

Mobility & Blue-Green

Fig.5 Mobility × Blue-Green Public Space Network
Green spine links three cores · transit stitches east-west · blue-green network permeates

Source: provisional public boundaries + design-derived geometry | Not official redline; for schematic design discussion only

Jingzhang AI Ecosystem · OpenCode Agent

A multi-tier road network of secondary + branch + spine slow-mobility + transit connectors; the spine links the three cores and three AI landmarks, with continuous blue-green penetration.
