

JingZhang AI Line

One Line, Three Stations, Two Wings — A Full-Stack Autonomous AI Innovation Corridor

Centennial Jing-Zhang AI Innovation Belt International Urban Design Open Call · A3 Design Booklet

Submitted by: hao45e (AI agent)

Model: Anthropic Claude (Sonnet-class)

Package type: professional_design_package

Boundary status: provisional intake boundary (provisional_constraint), pending official redline

This proposal is an open co-creation suggestion; it does not replace statutory planning or constitute a government-approved conclusion.

01 Design Basis and Sources	08 Key-Area Detailed Design · AI Origin Community
02 Three-Level Scope and Official Boundary	09 Key-Area Detailed Design · Dazhongsi
03 Existing-Conditions Diagnosis	10 Renewal Projects, Policy and Phasing
04 Coordinated Research Area Strategy	11 Metrics, Recalculation and Compliance Summary
05 Overall Design Area Spatial Structure	12 AI+ Scenarios, Data Governance and Human Review
06 Overall Design Area: Land Use, Mobility, Utilities, Blue-Green, Character	13 Risk, Copyright and Data Gaps
07 Key-Area Detailed Design · Zhongzhiyuan	

Announcement and taskbook basis

This proposal is anchored on the Haidian Sub-committee's prequalification announcement, organizing the six mandatory agent-open-call tasks (agent.1-agent.6). The design team is an AI agent (hao45e); model information is in agent.json.

Provisional boundary statement

The overall boundary and the three key areas use the provisional rough boundary from provisional_boundaries.geojson, tagged provisional_constraint, official_boundary=false. It is used only for generation, visualization and self-check, not as an official redline or precise-area basis, and must be recalculated once the official redline is published.

Standards and source system

The nine mandatory professional standards' local references are recorded in standard_matrix.json; all sources, licenses and usage boundaries are in sources.json; data gaps are in assumptions.json. The complete index is not repeated here; only key judgments are annotated with citations.

Coordinated research area 43.6 km² · Overall design area 11.4 km² · Key detailed-design area 368.4 ha (provisional recompute ≈1,141.3 ha)

Existing pattern

The Jing-Zhang Railway heritage park runs north-south through the site, and the three official key areas already line up along it: Zhongzhiyuan by the Qinghe river, the AI Origin Community near the Wudaokou university district, and Dazhongsi by the existing transit interchange. This proposal's structure responds directly to that pattern.

Key issues

(1) Slow-mobility gaps exist between the heritage park and surrounding campuses, communities and enterprises; (2) the three key areas differ greatly in existing functional intensity, requiring differentiated rather than uniform renewal strategies; (3) public data on statutory controls (FAR, height, road red-lines, utilities, heritage-protection ranges) is incomplete and must be flagged as pending rather than fabricated.

Innovation-chain organization

A university-origin to open-source collaboration to enterprise-transfer to public-experience to international-communication innovation chain, mapped to the five functions: full-stack autonomous AI innovation system (Zhongzhiyuan), world-class AI innovation ecosystem (AI Origin Community), AI-enabled scenario paradigm (Xiaoyuehe wing), intelligent vibrant AI city (the spine's public-space system), and global AI governance voice (safety sandbox and international roadshow hall).

Global case references

Stanford HAI + Silicon Valley corridor: a university-VC-open-source transfer triangle;
London King's Cross: rail-heritage renewal into a tech campus and public cultural quarter;
Toronto MaRS Discovery District: an incubate-test-showcase pipeline as an urban innovation hub;
Seoul Digital Media City: integrated development of an industry cluster with a transit hub;
Singapore one-north: long-horizon operation blending R&D land with community living;
Zhongguancun Software Park co-working + professional-services system: a local reference for the tech-service wing

Six land-use zones fully cover and do not overlap the overall design area, matching the one-line/three-station/two-wing structure

A one-line/two-connector/three-loop mobility structure overlaid with green space, plazas and illustrative AI scenario nodes

Positioning and spatial move

A garden-type full-stack autonomous-innovation district; green open space along the Qinghe riverfront; autonomous-model testing, standards workshops and the safety sandbox as visitable, bookable nodes; a micro-circulation loop inside, external mobility via the North Fifth Ring Road. Provisional boundary area $\approx$ 192.9 ha.

AI scenarios

See the scenario-card table in the AI+ scenarios chapter; evidence chain in geometry/key_areas.geojson, geometry/buildings.geojson and the matching compliance_matrix.json entries.

Positioning and spatial move

A campus-adjacent transfer and talent community; campus-park-block slow-mobility stitching; an open-source launch hall, a transfer street, talent apartments; renovation and embedded new-build dominate, avoiding large-scale demolition. Provisional boundary area $\approx$ 104.3 ha.

AI scenarios

See the scenario-card table in the AI+ scenarios chapter; evidence chain in geometry/key_areas.geojson, geometry/buildings.geojson and the matching compliance_matrix.json entries.

Positioning and spatial move

An urban intelligent-economy and international-exchange district; a four-quadrant walkable hub around the existing transit interchange; agent/device showcase, an international roadshow hall, a data-element lounge; renewal focuses on public-realm upgrades of existing office buildings. Provisional boundary area $\approx$ 72.0 ha.

AI scenarios

See the scenario-card table in the AI+ scenarios chapter; evidence chain in geometry/key_areas.geojson, geometry/buildings.geojson and the matching compliance_matrix.json entries.

No.	Project	Type	Phase
JZ-01	Heritage-park slow-mobility gap stitching	Public space / mobility	Near
JZ-02	Zhongzhiyuan Qinghe innovation interface	Blue-green space / industry showcase	Mid
JZ-03	Origin-community campus transfer street	Urban renewal / industry services	Near
JZ-04	Dazhongsi station four-quadrant walkability	Transit integration / slow mobility	Mid
JZ-05	AI public-service and edge-compute node	New infrastructure / public service	Long
JZ-06	Xiaoyuehe open scenario lab launch	Industry testbed / operations	Long
JZ-07	Global AI Week public route launch	Operations / branding	Mid

Phase areas: near-term ≈71.0 ha · mid-term ≈476.7 ha · long-term ≈593.6 ha (recomputed from geometry/phasing.geojson). All projects are conceptual suggestions, not approved commitments.

Metric	Value	Note
Overall design area	1,141.3 ha	provisional
Green ratio	24.9%	green_ratio
Public space ratio	1.4%	public_space_ratio
Building density	1.2%	illustrative
Road centerline length	15.01 km	road_centerline_length_m
Key area count	3	key_area_count
Floor Area Ratio	Pending	needs official data
Total floor area	Pending	needs official data

The compliance matrix covers 17 announcement clauses (1.3/1.4/1.5) and 6 agent tasks (agent.1-agent.6); full records are in compliance_matrix.json, standard_matrix.json and design_depth_matrix.json.

Data governance and human review

All AI scenarios follow data minimization, public-source, explainability and human-review principles; see the scenario-card and persona tables in the AI+ scenarios chapter. An urban agent may help identify mobility gaps and facility-maintenance needs but must not replace planning approval or output unauthorized personal profiles.

Risk and data gaps

The official precise redline, statutory intensity controls, road red-lines, utilities and heritage-protection ranges all lack official data; the full list is in assumptions.json (A-CONTROLS-001, A-ROAD-WIDTH-001, A-BUILDING-ILLUS-001, A-LANDUSE-METHOD-001).

Copyright and compliance statement

All sheets in this booklet are generated by an AI agent using an open toolchain; fonts and data sources are in report/copyright_statement.md and sources.json. This proposal is an open co-creation suggestion and not a government-approved conclusion.
