

MASTER CONCEPT

JING-ZHANG WATERLINE

WATERLINE: ONE LINE, THREE RESERVOIRS, TWO WINGS

Master concept and provisional evidence boundary

ONE LINE

Walking, shade, water information, rain learning, and staffed help

THREE RESERVOIRS

Zhongzhiyuan Validation
AI Origin Co-creation
Dazhongsi Adoption

TWO WINGS + FIVE GATES

Zhongguancun: standards/legal/finance
Xiaoyue: climate/community/scenarios
Permission → closed test → pilot → public review
→ adopt/exit

Provisional geometry · Conceptual recommendation · Not statutory planning or engineering design

JING-ZHANG WATERLINE v1.0

DESIGN POINTS

- One line and three reservoirs connect validation, co-creation, adoption, and public return.
- The provisional boundary is de-emphasised; every spatial move remains conceptual.

THREE SCALES

JING-ZHANG WATERLINE

THREE SCALES AND FUNCTION TRANSMISSION

From innovation ecosystem to street prototype

FIVE GATES FOR URBAN AI

EVIDENCE BOUNDARY

Statutory approval and professional engineering review remain independent. Provisional geometry supports concept generation and internal recalculation only.

Provisional geometry · Conceptual recommendation · Not statutory planning or engineering design

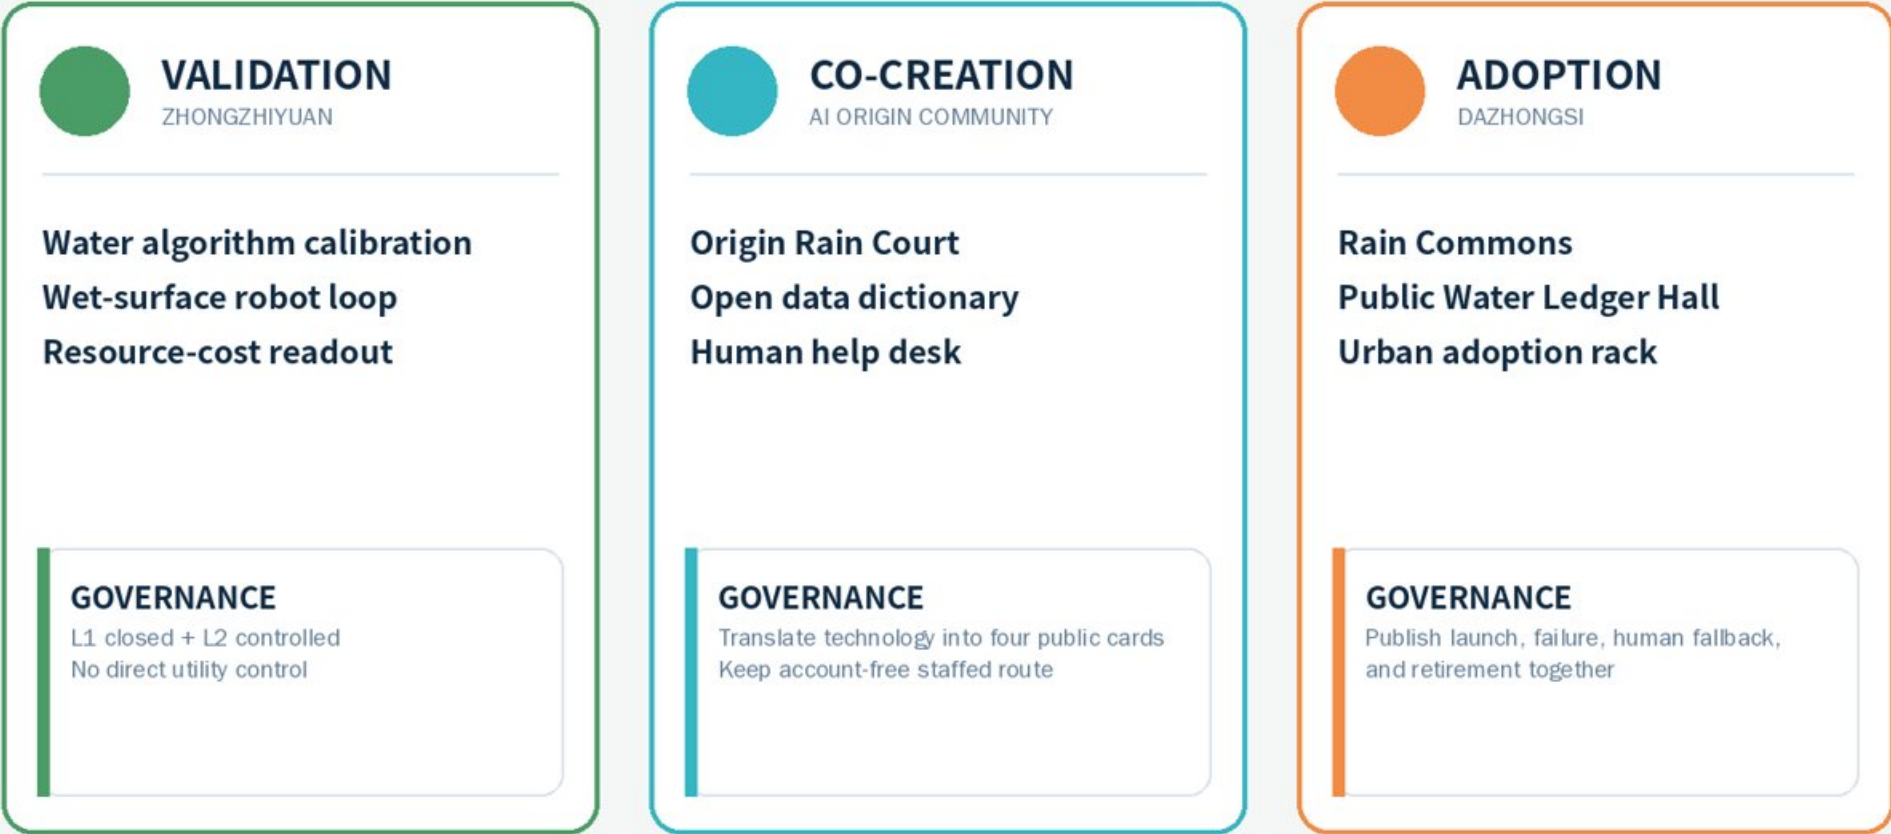

JING-ZHANG WATERLINE v1.0

DESIGN POINTS

- Three scopes transmit industry strategy into overall urban design and key-area prototypes.
- Five gates move AI from permission to adoption or exit.

THREE RESERVOIRS: KEY-AREA DESIGN

Distinct prototypes for validation, co-creation, and adoption

DESIGN POINTS

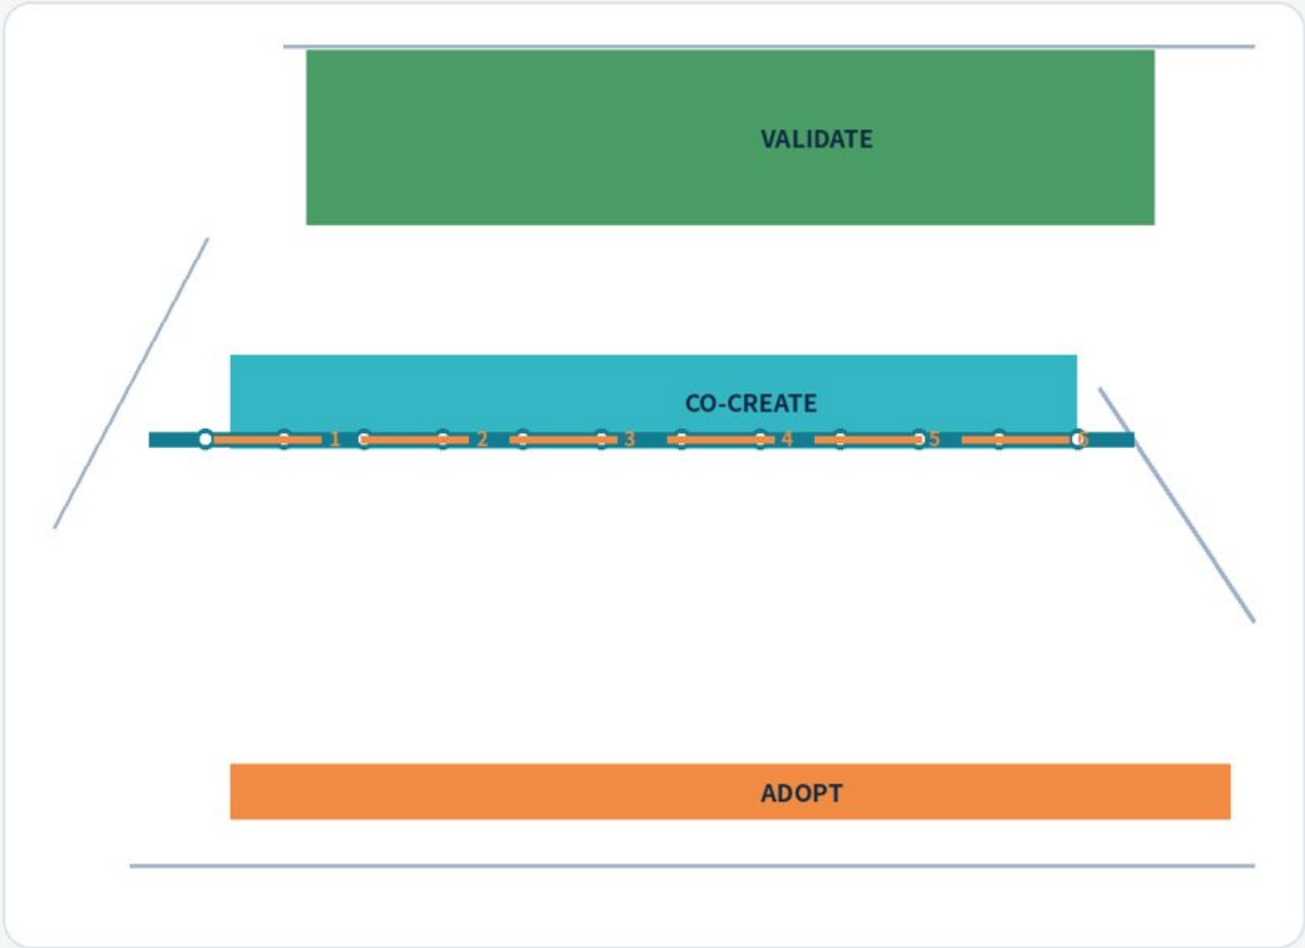

- Zhongzhiyuan validates, Origin co-creates, and Dazhongsi adopts.
- Each area provides human help, public status, and retirement routes.

MOBILITY + BLUE-GREEN

JING-ZHANG WATERLINE

WALKING, BLUE-GREEN SPACE, AND 12 WATER STATIONS

People first; AI operates only in bounded nodes

THREE PRIORITIES

- 1 Walking/accessibility
- 2 Cycling/rail interchange
- 3 Controlled robot testing

12 STATIONS

Water, cool routes, wet mode, maintenance, leak sandbox, robots, ledger, trees, events, classes, multilingual help, retirement

SIX GATES

Survey access, ponding, ownership, and safety before professionals select an intervention.

Provisional geometry · Conceptual recommendation · Not statutory planning or engineering design

JING-ZHANG WATERLINE v1.0

DESIGN POINTS

- Walking and accessibility come first; robots test only in controlled nodes.
- Six gates are surveyed before design; twelve stations are demountable and stop pable.

METRICS + EVIDENCE

JING-ZHANG WATERLINE

METRICS, DATA GAPS, AND RECALCULATION

Geometric knowns ≠ statutory controls ≠ future performance

FIVE EVIDENCE GATES

PENDING OFFICIAL DATA

Pending: official polygons, regulatory controls, road redlines, building ownership, water/drainage/flood/quality/underground utilities. Therefore FAR, height, density, detention, pipe capacity, quality, and flood risk remain unknown.

Provisional geometry · Conceptual recommendation · Not statutory planning or engineering design

JING-ZHANG WATERLINE v1.0

DESIGN POINTS

- Geometric knowns, unknown controls, and future operations are separated.
- The whole package must be recalculated after official polygons arrive.
