

Jing-Zhang AI Full-Factor Ecosystem | From Resource Stack to Urban Validation

Eight factor classes enter one continuous research—testing—adoption—long-term-life process rather than a static pack inventory.

Eight factors

LAND urban, coastal, sea-front, "15-min" communities, suburban/rural, peri-urban, urban city fringe, etc.	SPACE urban, suburban, peri-urban, urban city fringe, etc.	INDUSTRY urban, suburban, peri-urban, urban city fringe, etc.	CAPITAL urban, suburban, peri-urban, urban city fringe, etc.
TALENT urban, suburban, peri-urban, urban city fringe, etc.	COMPUTE urban, suburban, peri-urban, urban city fringe, etc.	DATA urban, suburban, peri-urban, urban city fringe, etc.	SCENARIOS urban, suburban, peri-urban, urban city fringe, etc.

Five-stage conversion chain

- 1 RESEARCH**
unintended data inputs
- 2 TRANSLATE**
technology → city problems
- 3 TEST**
controlled Zhongguancun trials
- 4 ADOPT**
Daohangri market if mobility
- 5 LIVE**
AI Origin Community daily life

Shared governance contract: C7 City Completeness + opt-out AI

HOME / LEARN / CASE / MOVE / GREEN / WORK / COMMON LIFE. Technology may scale only if ordinary city capabilities remain intact and a non-AI baseline stays usable. Test evidence records at least: users, places, data inputs, accountable roles, human takeover, stop thresholds, maintenance owner, acceptance KPIs, and public feedback. Factors are not out of topic: operating instance and public feedback reduce to research and resource allocation. Consider partnerships, capital, data, or company arrangements (investor proposals).

Spatial correspondence

Zhongguancun: FIDZMeeting | AI Origin Community: long-term Republic services | Daohangri: adaptation/commence/identity | Zhongguancun Service Wing: capital/finance | Zhongguancun Service Wing: capital/finance | Zhongguancun Service Wing: capital/finance

Concept proposed only: not delivery timing, resource commitment, investment commitment, data authorization, or implementation approval.

Full-factor AI ecosystem

Jing-Zhang City Completeness v0.5 | 10 AI+ Scenario Cards

Scenario cards are designed to be used in conjunction with the AI+ Scenario Cards tool.

SCN-01 Controlled low-speed robot testing

Proponent: emergency response and safety, fire services, and public safety.

Problems: reduced system cost safety, fire services, and public safety.

At low-speed emergency response and safety, fire services, and public safety.

Baseline: no safety, fire services, and public safety.

Baseline: no safety, fire services, and public safety.

SCN-02 Shared resource hub and compute

Proponent: Jing-Zhang City emergency response and safety, fire services, and public safety.

Problems: reduced system cost safety, fire services, and public safety.

At low-speed emergency response and safety, fire services, and public safety.

Baseline: no safety, fire services, and public safety.

Baseline: no safety, fire services, and public safety.

SCN-03 University retrofit – urban problem translation

Proponent: university –Jing-Zhang City emergency response and safety, fire services, and public safety.

Problems: reduced system cost safety, fire services, and public safety.

At low-speed emergency response and safety, fire services, and public safety.

Baseline: no safety, fire services, and public safety.

Baseline: no safety, fire services, and public safety.

SCN-04 Shuangfeng Town fire service accessibility

Proponent: At Jing-Zhang City emergency response and safety, fire services, and public safety.

Problems: reduced system cost safety, fire services, and public safety.

At low-speed emergency response and safety, fire services, and public safety.

Baseline: no safety, fire services, and public safety.

Baseline: no safety, fire services, and public safety.

SCN-05 Military household robot testing

Proponent: Jing-Zhang City emergency response and safety, fire services, and public safety.

Problems: reduced system cost safety, fire services, and public safety.

At low-speed emergency response and safety, fire services, and public safety.

Baseline: no safety, fire services, and public safety.

Baseline: no safety, fire services, and public safety.

SCN-06 Community shared-space scheduling

Proponent: Jing-Zhang City emergency response and safety, fire services, and public safety.

Problems: reduced system cost safety, fire services, and public safety.

At low-speed emergency response and safety, fire services, and public safety.

Baseline: no safety, fire services, and public safety.

Baseline: no safety, fire services, and public safety.

SCN-07 Multilingual Jing-Zhang heritage guide

Proponent: Jing-Zhang City emergency response and safety, fire services, and public safety.

Problems: reduced system cost safety, fire services, and public safety.

At low-speed emergency response and safety, fire services, and public safety.

Baseline: no safety, fire services, and public safety.

Baseline: no safety, fire services, and public safety.

SCN-08 Complex transfer and walking assistance

Proponent: Jing-Zhang City emergency response and safety, fire services, and public safety.

Problems: reduced system cost safety, fire services, and public safety.

At low-speed emergency response and safety, fire services, and public safety.

Baseline: no safety, fire services, and public safety.

Baseline: no safety, fire services, and public safety.

SCN-09 Time-limited Ancestral ritual pilot

Proponent: Jing-Zhang City emergency response and safety, fire services, and public safety.

Problems: reduced system cost safety, fire services, and public safety.

At low-speed emergency response and safety, fire services, and public safety.

Baseline: no safety, fire services, and public safety.

Baseline: no safety, fire services, and public safety.

SCN-10 CT City Completeness assessment assistant

Proponent: Jing-Zhang City emergency response and safety, fire services, and public safety.

Problems: reduced system cost safety, fire services, and public safety.

At low-speed emergency response and safety, fire services, and public safety.

Baseline: no safety, fire services, and public safety.

Baseline: no safety, fire services, and public safety.

Scaling rule A scenario must be tested using only one of the following: public safety, fire services, and public safety. A scenario must be tested using only one of the following: public safety, fire services, and public safety.

Ten AI scenario cards

[illegible][illegible]

04 | Mobility • Blue-Green • Civic Space

Urban mobility • Urban design • Urban sustainability • Urban governance • Urban planning

The diagram is a vertical cross-section of a city block. It features a central green corridor (Blue-Green space) flanked by urban blocks. The blocks are divided into different levels: ground level (Civic space), upper levels (Residential space), and a top level (Office space). The green corridor is composed of a central green strip (Blue-Green space) and a surrounding green strip (Blue-Green space). The urban blocks are shown in a light green color. The diagram is labeled with 'Blue-Green' and 'Civic Space' at the top.

Public first rules

- No account / no app required
- At guidance is optional
- See 2.10 fields are interventions, not road realign
- Thermal entry, structures and parking must performative data

Blue-Green space
 Blue-Green space
 Blue-Green space

Concept proposed • provisional geometry to test an official rule • modulation where official interventions

Mobility and blue-green system

05 | Metrics • Evidence • Data Gaps

Known values, conceptual design quantities and outcomes (data gaps/missing quantities are left separate)

SITE

11.41 km²

GREEN

19.5%

PUBLIC

3.4%

CT

3

Concept (land use quantities) (not approved zoning)

Category	Quantity (million sq)
Park green	2.0
Commercial service	2.8
Education	0.8
Culture	0.8
Research	1.4
Community service	1.5
Residential	1.2

Critical data gaps

- Official master plan / land use policy/governance
- Official final heights / road network / heritage / tree / utilities
- Ground building, houses, household and service capacity survey
- Verified road widths, parking, bus/rail interfaces and engineering constraints

Recommendation: when official governance is ready, coordinate urban, incorporate land use, building, height, ground use, water, drainage, services, planning and zoning.

Concept proposal • potential planning is not an official outcome • no available data official data source

Metrics and evidence gaps
