concept public-space ratio
public_space_ratio

C7 + 3 + 10

7 city abilities + 3 flagship pilots + 10 scenarios
baseline / human takeover / exit

Three flagship pilots | PRECONDITION → TEST → RECEIPT → GO / REVISE / STOP

01 ZHONGZHIYUAN | low-speed robot test

Non-AI baseline: ordinary walking + staffed delivery
Gate: boundary / safety / insurance / accountable role
STOP: pedestrian intrusion, unsafe near-miss, access barrier
Currency cost, contracts and permits stay UNKNOWN until verified

02 AI ORIGIN | accessible care/navigation

Non-AI baseline: physical signs + staffed help desk
Gate: physical access / human help / data minimization
STOP: wrong route, exclusion, sensitive-data misuse
Refusing tracking/account may not remove basic service

03 DAZHONGSI | transfer + multilingual guide

Non-AI baseline: fixed wayfinding + human service
Gate: freshness / queue safety / verified real accessibility
STOP: stale info, queue harm, basic access failure
Provisional key-area geometry is not station engineering evidence

Public interest | 9 explicit user groups

long-term residents/families · older people · disabled/sensory-limited users · children/caregivers
students/researchers · founders/firms · service workers/commuters · visitors/international users
no-smartphone / no-account / deliberate opt-out users

Each checks: benefit → burden → exclusion risk → non-AI equivalent → human help / appeal
Public space remains walkable, usable and help-accessible without an account; basic service survives AI-off.

Implementation + claim boundary | directly auditable

RACI: A / R / C / I; quantity basis; maintenance cadence; start gates; stop receipts
Evidence index: brief 20% · originality 10% · AI planning 15% · feasibility 20%
inclusion 10% · risk 10% · expression 15%; one-hop mapping to agent.1–agent.6

Do not claim official boundaries, approvals, partnerships, investment, budgets, field performance or im
Machine PASS proves package/evidence consistency, not statutory or field validity.

Concept-only · provisional geometry · bilingual evidence · v0.6 integration in progress

01 | Site Overview + City Completeness

One civic green spine · six completeness segments · six east-west stitches · three key-area cores

Three-scale work frame

- Coordinated research ~43.6 km² | ecosystem + talent + future city
- Overall design ~11.4 km² | continuous spatial structure
- Three key areas ~368.4 ha | detailed design tasks

C7

HOME · LEARN · CARE · MOVE · GREEN · WORK · COMMON LIFE

AI is an optional enhancement across C7, not an eighth land-use category.

Concept proposal · provisional geometry is not an official redline · recalculate when official data arrives

Site overview and C7 method

v0.6 | Three flagship pilots: validate before scaling

All quantities and durations are conceptual test configurations, not approved budgets, contracts, permits, sites, or partnership commitments.

01 Zhongzhiyuan | Low-speed robots

Question: how can R&D testing avoid turning public routes into default test spaces?

NON-AI BASELINE
Ordinary walking + human delivery + staffed on-site guidance

Concept test configuration
1 bounded / controllable yard; 2–4 low-speed devices;
at least 2 human marshal roles per active test window

Prerequisite evidence gates
Site permission, fire/egress, device safety, insurance/liability,
physical separation and human takeover confirmed before start

Window / decision
14–30 controlled days → GO / REVISE / STOP

KPI
No spill into unauthorized routes; takeover reachable;
ordinary movement not degraded; incidents reviewable

Automatic stop threshold
Boundary breach, loss of link, blocked accessible path, takeover fail

Exit receipt
Device removal + temporary-space reset + incident/data cleanup re

Responsibility structure
A: real operating authority (to be confirmed)
R: test lead; C: safety/accessibility/maintenance;
I: public and site management

02 AI Origin | Access / care navigation

Question: can digital assistance enhance, rather than replace, physical access?

NON-AI BASELINE
Continuous physical accessibility + fixed signs + staffed help desk

Concept test configuration
1 route already checked physically;
10–20 voluntary, withdrawable use sessions as a concept cap

Prerequisite evidence gates
Accessibility review, service hours, human help, data minimization,
consent/exit and equal service without registration confirmed

Window / decision
2–4 week small-scale co-test → GO / REVISE / STOP

KPI
Route completion not below baseline; human help reachable;
refusing tracking never removes basic service; errors appealable

Automatic stop threshold
Misdirection to inaccessible path, sensitive-data breach, no human

Exit receipt
Personalization off + deletion/migration record + baseline continues

Responsibility structure
A: real public-service authority (to be confirmed)
R: staffed service lead; C: accessibility/privacy/community;
I: residents, carers and users

03 Dazhongsi | Interchange / multilingual w

Question: can AI improve legibility without creating a dependency?

NON-AI BASELINE
Static signs + staffed advice + routes understandable without a phone

Concept test configuration
1 field-verified arrival portal; 2–3 candidate routes;
Chinese / English and no-phone modes all remain available

Prerequisite evidence gates
Real entrances, opening hours, property/operations interface,
accessibility and emergency wayfinding verified before testing

Window / decision
14-day bounded validation → GO / REVISE / STOP

KPI
Wayfinding time/help requests improve against baseline;
static signs stand alone; bad advice is human-correctable

Automatic stop threshold
Unsafe routing, conflict with live site state, failed human update

Exit receipt
AI layer off + physical signs retained + correction/closure notice

Responsibility structure
A: real station-city/public-interface authority (to be confirmed)
R: on-site information lead; C: transport/accessibility/operations;
I: commuters, visitors and nearby residents

Shared resource and cost boundary
v0.6 states quantity bases, staff roles and test durations only. Currency budget, total FTE, procurement, insurance, contracts and permits stay UNKNOWN until site and accountable parties are confirmed.

Concept proposal only. Provisional geometry remains non-official; no pilot above is represented as executed, funded, approved or contracted.

v0.6 | Inclusion and burden: who benefits, who bears cost, who can opt out

Nine personas are design-review tools, not population statistics. No AI enhancement may turn “no phone, no account, no tracking, or need for human help” into loss of basic city services.

Design persona	Primary public benefit	Potential burden / exclusion risk	Non-AI equivalent path	Human help / appeal
1 Long-term residents / families	Short daily trips, care, civic commons Stable service rather than one-off spectacle	Neighborhood becomes a testbed; noise; privacy spillover	Ordinary housing, shops and community services	Staffed community desk; public stop/correction
2 Older residents	Care access, rest, clear wayfinding	Digital barriers, misdirection, service moved into an app	Fixed signs, phone/in-person help, places to stop	Priority human review; user or carer may request
3 Disabled / sensory-limited users	Continuous access, understandable info, independent arrival	App personalizes the wrong route; physical barriers get highlighted	Physical accessibility exists before digital enhancement	Accessibility review; wrong route correction
4 Children and carers	Childcare/learning, safe slow movement, family routines	Unneeded profiling, over-automation, testing mixed with childcare	Childcare, physical safety boundaries, ordinary play space	Carer/playspace; high-risk tests default away from app
5 Students / researchers	Learning, shared equipment, research-to-city translation	Account lock-in, research-data overreach, exclusion by open access	Open catalog, staffed booking, offline learning	Human review; IP/data disputes escalated
6 Founders / enterprise workers	Testing, translation, enterprise services, adoption	Public resources become closed channels; commitment to private	Operational admission rules, staffed enterprise services	Admission/appeals public; conflicts handled
7 Service workers / commuters	Reliable arrival, rest, staffed help, ordinary jobs	Automation shifts labor burden, waiting, movement risk	Normal shifts, human jobs and commute routes	On-site available; work/mobility issues can be discussed
8 Visitors / international users	Multilingual arrival, heritage understanding, public exchange	Translation error, default consent, local-app-only service	Chinese/English fixed signs + staffed advice + multilingual access	Multilingual access; misinformation can be corrected
9 No-phone / no-account / opt-out users	Full access to city use and public service	Digital exclusion, default consent, worse treatment after opt-out	Permanent signs, staffed entry, paper/in-person service	No smartphone required to refuse AI; equivalent service

Shared rule: every persona retains the non-AI baseline. Refusing tracking/registration or an AI shutdown must not reduce housing, movement, basic public services, or access to public space.

v0.6 | Implementation resources & RACI: make feasibility auditable

This table states conceptual quantity bases, roles and maintenance cadence only. Currency budgets, total FTE, procurement entities, insurance contracts and approvals remain UNKNOWN.

PILOT	RESOURCE / QUANTITY BASIS	RACI RESPONSIBILITY	MAINTENANCE CADENCE	PRE-START EVIDENCE GATES
Zhongzhiyuan Controlled low-speed robots 14–30 day concept window	• 1 controllable test yard • 2–4 low-speed devices • ≥2 human marshal roles / active window • removable separation / stop signage Cost class: M (concept) currency UNKNOWN	A: real operating authority (TBC) R: on-site test lead C: safety / accessibility / maintenance / insurance I: site management / public	Device + route check before each day Incident log every test window Daily close-down reset Weekly GO/REVISE/STOP review	Site permission Fire / egress Device safety Liability / insurance Separation + human takeover
AI Origin Accessibility / care navigation 2–4 week concept window	• 1 route already physically audited • 10–20 voluntary, withdrawable sessions cap • 1 fixed staffed help point / service window • L1/L2 non-AI wayfinding remains live Cost class: S–M (concept) currency UNKNOWN	A: real public-service authority (TBC) R: staffed service lead C: accessibility / privacy / community / care I: residents / carers / user representatives	Physical route check before daily operation Human review for every wrong suggestion Weekly retention/deletion audit Issue list published at phase close	Accessibility review Staffed service hours Data-minimization plan Consent / exit Equal no-account service
Dazhongsi Interchange / multilingual wayfinding 14-day concept window	• 1 field-verified arrival portal • 2–3 candidate routes • Chinese / English / no-phone entry • static signs retained and standalone Cost class: S–M (concept) currency UNKNOWN	A: real station-city/public-interface authority (TBC) R: on-site information lead C: transport / accessibility / property / operations I: commuters / visitors / nearby residents	State verification before daily opening Human update whenever site state changes Unsafe guidance closed/corrected same day Compare baseline on days 7 / 14	Real entrances / opening hours Property / operations interface Accessible route verified Emergency guidance consistent Human update owner named

Shared decision gate: PRECONDITION → TEST → RECEIPT → DECISION

1 Preconditions evidenced
not complete = do not start

2 Time-bounded controlled test
AI-off baseline runs in parallel

3 Exit / fault receipt
remove, correct, delete, reset

4 GO / REVISE / STOP
scaling is never the default

Shared boundary: if accountable parties, permits, safety, insurance, service hours or field conditions cannot be verified, the proposal remains a concept protocol; no fake budget, partnership or schedule fills the gap.

Concept-only implementation framework. Provisional geometry is non-official and is not a procurement, approval, contract or construction basis.

v0.6 | Reviewer evidence index: one-hop traceability

This is not a self-score. It maps public rubric/taskbook requirements to inspectable evidence and claim boundaries; the reviewer still decides the score.

A | Seven public scoring dimensions → evidence

Dimension / weight	Evidence a reviewer can inspect directly	Critical claim boundary
brief_alignment · 20%	proposal: three scopes / positions-functions-zones-wings; taskbook-coordination-loop.svg · regional-collaboration-matrix.svg · site-overview.png	provisional geometry never becomes statutory control
originality · 10%	C7 city-completeness contract + “AI is not an eighth land-use class”; ai-ecosystem-map.svg · public-space-components-wayfinding.svg · flagship-pilot-protocols.svg	new mechanisms are open proposals, not official adoption
ai_planning_innovation · 15%	10 scenario cards + 3 flagship pilots + eight-factor ecosystem loop; ai-scenario-cards.svg · flagship-pilot-protocols.svg · privacy-data-governance.svg	every scenario retains baseline / human takeover / stop
implementation_feasibility · 20%	project-threshold-KPI + quantity basis / RACI / cadence / prerequisite gates; implementation-operations-matrix.svg · implementation-resource-raci.svg · phasing.geojson	currency/FTE/contracts/permits remain UNKNOWN if unverified
public_interest_inclusion · 10%	C7 + 9 personas: benefit/burden/opt-out + no-account public entry; inclusion-burden-matrix.svg · public-space-components-wayfinding.svg · public_space.geojson	refusing tracking/account may not remove basic service
risk_compliance · 10%	six data-governance classes + stop/exit receipts + rights/source ledger; privacy-data-governance.svg · sources.json · copyright_statement.md · assumptions.json	no fabricated endorsement, partnership, funding, approval, field fact
expression_completeness · 15%	bilingual proposal / 5 core figures / A3 / A0 / offline visual / evidence index; manifest file hashes; final self-check/preflight record only actual results	machine PASS proves package consistency, not field performance

B | Mandatory agent.1–agent.6 tasks → primary evidence

Task	Primary deliverables / location	Boundary not to cross
agent.1 concept / coordination	taskbook loop · brand/VI · spine-six segments-six stitches-three cores · regional links proposal + taskbook-coordination-loop.svg + brand-vi-direction.svg	no statutory FAR/height/road redline/demolition conclusions
agent.2 AI ecosystem	6 global cases · eight-factor map · research → translate → test → adopt → live case-study-comparison.svg + ai-ecosystem-map.svg + sources.json	no invented firms, investment, output, fiscal/policy commitment
agent.3 AI+ scenarios	10 scenario cards · 3 flagship tests · 9 personas · scenario data governance ai-scenario-cards.svg + flagship-pilot-protocols.svg + inclusion-burden-matrix.svg	tests are not approved operations; high risk requires human review
agent.4 public space / landmarks	public green spine · east-west stitches · 3 honor nodes · 7 components · 3-level signs mobility-bluegreen.png + public-space-components-wayfinding.svg + landmarks-events-conversion.svg	no bridge/tunnel/subsurface/property engineering claims
agent.5 culture / communication	Jing-Zhang linear memory + C7 COMPLETE LOOP + L1/L2/L3 wayfinding + bilingual copy proposal culture narrative + brand-vi-direction.svg + public-space-components-wayfinding.svg	proposal VI ≠ official Belt logo; no unlicensed marks/portraits
agent.6 events / operations	annual event chain · developer week · controlled test days · conversion / exit pathway landmarks-events-conversion.svg + implementation-resource-raci.svg + implementation-operations-matrix.svg	events, attraction and funding are mechanisms, not settled plans

This index enters proposal/core figures only after referenced files exist, manifest hashes are refreshed, bilingual mapping is complete, and canonical self-check passes. v0.6 is still in design integration.

Jing-Zhang City Completeness v0.5 | Taskbook Coordination Loop

Complete the city first, then let AI enter daily life · all relationships are concept proposals for open-call review

Three positionings

C7 City Completeness = the shared acceptance floor for every AI and spatial proposal

HOME · LEARN · CARE · MOVE · GREEN · WORK · COMMON LIFE

Every scenario must answer: which ordinary city capability improves, what trade-off is created, and how does the non-AI baseline continue if AI fails or a resident opts out?

Loop: research/service factors → three positionings → five functions → three areas/two wings → three key areas + 10 scenarios → C7 acceptance → operations/public feedback → next iteration

Note: this diagram is not an official redline, statutory functional zoning, approval decision, or committed inter-district partnership. Spatial details and responsibilities require official data and professional review.

Jing-Zhang City Completeness v0.5 | Global AI Innovation Ecosystem Case Comparison

Translate verifiable mechanisms only. Do not copy institutional scale, funding, logos, images, construction metrics or partnerships; cases do not establish Jing-Zhang statutory controls.

Case	First-party public mechanism	Jing-Zhang translation	Spatial / operating application	Explicitly not copied
Vector Institute Canada	neutral connector among research, talent and industry adoption	translate research results into real organizational/city problems before testing; a company list is not an ecosystem	Zhongzhiyuan research-translation interface; SCN-03 problem translation	institution scale, partner list, funding, brand assets
Mila Québec, Canada	university collaboration, open science, responsible AI, knowledge transfer	put open research, talent and responsibility boundaries in one ecosystem; sharing technology is not unrestricted data sharing	university—Zhongzhiyuan interface; Open Week + source governance	university-network count, industry partners, historical scale
Alan Turing Institute United Kingdom	interdisciplinary research, knowledge exchange and public engagement	put public questions, professional judgment and researchers inside one review loop rather than one-way technology display	annual C7 audit; public issue list + teach-back	national-institute status, resources and policy authority
AI Singapore 100E Singapore	real problem → PoC/MVP evidence before deciding continuation	make scaling the second step after evidence; define start, stop, review and exit thresholds	Open Test Yard; staged validation across 10 scenarios	program funding, term, eligibility, government-support conditions
Seoul AI Hub Seoul, Korea	startup support, talent development, shared space, industry exchange	R&D space should not be isolated from public exchange, talent services and accessible shared space	complete Zhongzhiyuan innovation campus; developer-community operations	company count, facility scale, investment results and image
Punggol Digital District Singapore	adjacency among industry, university, public space and community life	innovation and long-term community are not islands; research, work and public life share one urban base	one spine / six segments / six stitches / three cores; AI Origin long-term-life validation	land system, development model, investment and technology stack

Case-use boundary

are first-party public factual/mechanism references. No logo, image, map, video or proprietary diagram is embedded. Jing-Zhang spatial, metric, organization, investment, partnership and approval conclusions must come from project evidence and future real

Access date, publisher, purpose, reuse status, limitations, collection and transformation are recorded in `sources.json`; this figure is only a human-readable mechanism comparison.

Concept comparison only; no affiliation, endorsement or partnership is implied by inclusion in this table.

Jing-Zhang AI Full-Factor Ecosystem | From Resource Stack to Urban Validation

Eight factor classes enter one continuous research—translation—testing—adoption—long-term-life process rather than a static park inventory.

Eight factors

Five-stage conversion chain

Shared governance contract: C7 City Completeness + opt-out AI

HOME / LEARN / CARE / MOVE / GREEN / WORK / COMMON LIFE: technology may scale only if ordinary city capabilities remain intact and a non-AI baseline stays usable.

Test evidence records at least: user, place, data inputs, accountable role, human takeover, stop threshold, maintenance owner, acceptance KPI, and public feedback.

Factors are not one-off inputs: operating evidence and public feedback return to research and resource allocation. Unverified partnerships, capital, data, or compute arrangements remain concept proposals.

Spatial correspondence

Zhongzhiyuan: R&D/testing | AI Origin Community: long-term life/public services | Dazhongsi: adoption/commerce/mobility | Zhongguancun Service Wing: capital/IP/services | Xiaoyuehe Sc

Concept proposal only; not statutory zoning, resource commitment, investment commitment, data authorization, or implementation approval.

Jing-Zhang City Completeness v0.5 | 10 AI+ Scenario Cards

Shared contract: real problem first · AI is optional enhancement · keep a non-AI baseline · human takeover · stoppable/exit-ready · evidence decides scaling

SCN-01

Controlled low-speed robot testing

Place/users: auditable Zhongzhiyuan test zone | R&D teams, park users
Problem: embodied systems need safety, boundary, and takeover validation before real deployment
AI: low-speed navigation/avoidance/tasks under route, time, and speed limits
Baseline/exit: ordinary public routes stay open; anomaly → human takeover and test stop
Evidence: takeover rate, near misses, boundary breaches, public-route continuity after shutdown

SCN-06

Community shared-space scheduling

Place/users: community commons/shared rooms | residents, groups, service staff
Problem: booking conflicts, displacement of weaker groups, opaque operations
AI: cluster demand, flag conflicts, suggest low-use slots; never auto-cancels bookings
Baseline/exit: staffed ledger and walk-up desk; core public hours cannot become algorithmic paywalls
Evidence: conflict rate, staffed coverage, group fairness, free-public-hour availability

SCN-02

Shared research equipment and compute

Place/users: Zhongzhiyuan research-service node | universities, startups, researchers
Problem: fragmented equipment/compute information and opaque booking/capacity boundaries
AI: demand matching, scheduling advice, capacity alerts; never grants access automatically
Baseline/exit: human desk and conventional booking remain; disputes go to human confirmation
Evidence: wait time, human reassignment rate, capacity conflicts, no-account booking access

SCN-07

Multilingual Jing-Zhang heritage guide

Place/users: heritage park and civic nodes | residents, students, international visitors
Problem: history is hard to access across languages and AI can invent unsourced narratives
AI: multilingual Q&A and tailored routes using traceable source material only
Baseline/exit: physical labels, human guides, fixed multilingual text remain readable
Evidence: source-hit rate, correction rate, language coverage, offline/no-account access

SCN-03

University result → urban problem translation

Place/users: university—Zhongzhiyuan—community interface | researchers, services, residents
Problem: technology outputs are hard to convert into testable city problems and responsibilities
AI: classify problems, summarize evidence, match pilot candidates; humans decide projects
Baseline/exit: public issue list, human review, paper/offline participation remain available
Evidence: issue closure, human rejection, provenance coverage, resident-feedback coverage

SCN-08

Complex transfer and walking assistance

Place/users: Dazhongsi/southern station-city interface | commuters, visitors, disabled users
Problem: transfer paths, closures, and accessible detours are difficult to synchronize
AI: route explanation, crowd alerts, accessible alternatives; no control over transport systems
Baseline/exit: physical wayfinding, staff, and statutory accessible routes remain primary
Evidence: wrong-route rate, transfer time, accessible-route success, staffed-help demand

SCN-04

Shuangfen Fortress accessibility assistant

Place/users: AI Origin Community | older adults, families, disabled users, visitors
Problem: complex routes, service entries, and temporary barriers reduce accessibility
AI: accessible-route guidance, service navigation, temporary-barrier alerts
Baseline/exit: physical wayfinding, staffed help, continuous accessible infrastructure come first
Evidence: route continuity, help response, misguidance rate, access without a smartphone

SCN-09

Time-limited AI-native retail pilot

Place/users: Dazhongsi/scenario nodes | startups, customers, neighboring ordinary businesses
Problem: new formats need market evidence without permanent public-resource lock-in
AI: pilot services, demand analysis, operational assistance within time/space/data limits
Baseline/exit: ordinary payment/service access; expiry review, remove and restore if thresholds fail
Evidence: trial conversion, complaints/refunds, exit restoration cost, public-space impact

SCN-05

Voluntary household robot testing

Place/users: opt-in home/public mock-up | families, carers, R&D teams
Problem: home tests involve privacy, child/elder safety, and service continuity after exit
AI: voluntary task support with scenario consent, minimal data, visible status indicators
Baseline/exit: refusal never removes rights; one-step stop + human/conventional alternative
Evidence: exit recovery time, deletion confirmation, human takeover, incident/complaint record

SCN-10

C7 City Completeness inspection assistant

Place/users: overall design area | planning team, operators, public participants
Problem: iterations can chase tech novelty while missing ordinary capabilities and evidence gaps
AI: flag C7 gaps, evidence, conflicts, unresolved items; never replaces professional judgment
Baseline/exit: human checklist, public matrices, professional review remain final authority
Evidence: gap closure, human override, provenance coverage, public-question closure

Scaling rule A scenario moves beyond limited testing only when safety, public interest, privacy, non-AI baseline, and maintenance responsibility all pass; any red-line trigger permits shutdown and restoration of ordinary city :
All KPIs are concept-stage validation directions, not measured performance or government commitments.

Jing-Zhang City Completeness v0.5 | Regional Collaboration Validation Matrix

Regional collaboration is framed as verifiable interfaces, not as unconfirmed institutional relationships presented as facts.

Potential counterpart	Proposed role	Factors exchanged	Spatial/operating interface	Data/commitment boundary	Validation method
Beiyuwei Community	daily-life scenario comparison and service-feedback node	resident needs, public-service experience, accessibility feedback	community walk audits / public issues no assumed cross-area facility sharing	public/cleared material only; no personal health/home data exchange; no claim of existing agreement	shared issue list, small service comparison human review remains final
Future Science City	potential external node for research-to-city translation	methods, talent exchange, public research outputs	translation workshops, problem/case cross-checks	public/authorized material only; no assumed compute, funding, or institutional sharing	public-case review, shared problem framing PoC pre-review
Huairou Science City	reference for large-science and research-ecosystem methods	public facility practices, cross-disciplinary methods	method comparison and researcher-exchange concepts	no claim that facilities/capacity are available; real operators must confirm access separately	public-source comparison, method-fit assessment no resource reservation
Beijing E-Town	potential comparison for industrialization/market validation	public industry cases, test-to-production practices	case comparison and enterprise-needs methods	no assumed partnership, procurement, investment, or orders; business data requires authorization	anonymized case comparison, market-exit review test replicable mechanisms
Beijing–Tianjin–Hebei	research scale for cross-region talent/industry/governance questions	public policy, industry-chain, commuting/innovation-network research	research framework and case comparison; no unapproved new facility alignments	cross-region data must be aggregated, public, or licensed; research links are not administrative commitments	public-data cross-checks, scenario testing + expert review explicit uncertainty levels

Collaboration admission rule
Only public facts and counterpart authorization before joint testing. Naming an institution here marks only a potential interface; it does not mean consent, funding, data sharing, or implementation commitment.
Any personal, enterprise, health, household, location, or behavioral data requires separate minimization, permission, access, deletion, retention, and exit review.

Concept proposal for open-call review only; not a cooperation agreement, commercial contract, data authorization, planning approval, or administrative decision.

Regional collaboration validation

Jing-Zhang City Completeness v0.5 | Implementation & Long-Term Operations Matrix

All “roles” are proposed responsibility types. Real organizations, budgets, contracts, and approvals require later professional confirmation.

Package	Space	Proposed roles	Prerequisites	Start / stop thresholds	Maintenance	Acceptance KPI
Public green spine	north–south overall backbone	planning / park / street operations + community reps	official boundary/survey; fire, stormwater, accessibility review	start: walking/green baseline works stop AI layer: blocks movement, safety/privacy red line or poor maintenance	facility + landscape inspection AI layer can shut down independently	continuous access, accessibility, shade/stay, fault recovery
Open test yard	controlled Zhongzhiyuan zone	test operations + safety officer R&D team / site management	boundary, speed, hours, human takeover + incident process	start: enclosure/review/takeover ready stop: boundary breach, severe near miss, takeover failure or unresolved complaint	daily opening check logs + incident review	no unauthorized breach, takeover success, recovery time
Community commons	AI Origin Community	community operations + residents public-service/property interface	free core hours, accessibility, human booking + appeal route	start: ordinary public function opens first stop algorithmic scheduling: fairness drops, complaints backlog or human route fails	daily staffing + monthly review nonessential devices removable	free hours, conflict rate, group fairness, complaint closure
Station-city guidance	Dazhongsi / south	transport / district service wayfinding + accessibility expertise	verified entrances/closures, statutory accessible paths	start: physical signs + staff complete stop AI: route-error risk, stale data or emergency mode	named information updater switch to human mode in emergencies	error rate, transfer time, accessible-route success
AI retail pilot	Dazhongsi / scenario node	retail ops + consumer protection site/data responsibility	term, exit clause, normal payment, complaint/refund/data permission	start: exit cost + restoration plan clear stop: complaint/refund anomaly, public-space impact or term expiry	weekly operations review mandatory re-review at expiry	complaints/refunds, exit cost, restoration completion
Heritage guide	heritage park / civic nodes	cultural content editor public-space operator	source ledger, fixed multilingual text, fact-correction route	start: all core narratives traceable stop generation: source invalid, fact errors cannot be corrected promptly	content version control periodic factual review	source hit, correction, multilingual/offline coverage
Developer Open Week	Zhongzhiyuan + civic nodes	community/developer operations safety + public communication	event boundary, public schedule, safety and IP rules	start: event/safety owner assigned stop: safety event or license/IP/privacy conditions fail	annual events calendar post-event review each time	participation diversity, problem conversion, event closure
Annual C7 audit	overall area / three key areas	planning / operations / public independent professional review	versioned metrics/evidence ledger, open unresolved data gaps	start: annual data/feedback archived stop scaling: any C7 capability degrades materially without remedy	annual public review next-iteration action list	C7 gap closure, provenance, public-question closure

Operating principle: the AI layer must be independently stoppable. Ordinary city functions cannot disappear with an algorithm, vendor, or account system. Real roles, budgets, events, and cross-institution arrangements require separate confirmation.

Concept-stage validation matrix; not an organizational appointment, fiscal commitment, procurement contract, operating concession, or implementation approval.

Implementation and long-term operations

Jing-Zhang City Completeness v0.5 | AI Scenario Data Flow & Privacy Governance

Principles: purpose limitation, data minimization, aggregation/anonymization by default, shortest necessary retention, access/deletion, human review, and no loss of basic city rights for opting out.

Data class	Allowed purpose	Minimize / process	Access control	Retention / deletion	Human review / opt-out	Scenarios
Location / route	navigation, accessible routing, controlled-test safety	prefer ephemeral/on-device processing; use only precision needed for route/safety, no persistent travel-history profile	user + authorized service role; operations receive aggregates	delete precise routes after session; de-identify anomaly logs with limited term	route anomalies can go to staff; physical wayfinding works with location off	01 / 04 08 / 10
Health / care	service navigation/referral only; no diagnosis/treatment decision	avoid unnecessary records; prefer user-entered “what service is needed” rather than clinical detail	user / authorized carer; high-risk requests go to humans	short-lived navigation session; deletion request produces confirmation	high-risk advice requires human review; direct staffed help remains available	04 service nav
Home environment	voluntary household-robot task validation	on-device by default; no continuous purpose-free audio/video; visible notice when children/visitors are present	authorized household members + necessary safety role only; R&D gets de-ID results	raw home media not uploaded by default; exit triggers deletion/revocation	one-step stop + human takeover; refusal cannot reduce housing/community rights	05
Account / identity	booking, authorization, appeals where identity is necessary	do not force registration where guest/ anonymous use works; separate identity fields from behavioral data	least privilege; role-based access; administrative access is audited	service-necessary term only; account closure revokes permissions	staffed/no-account route required; account failure cannot remove basic service	02 / 06 09
Behavior / usage	service quality, crowding, space-scheduling review	prefer counts/aggregation; no face recognition; no cross-scenario individual profile	operators see aggregates; individual debugging needs explicit reason	version aggregate stats; delete individual logs quickly	humans can override scheduling; public-space use cannot depend on tracking	06 / 08 09 / 10
Research / enterprise	equipment/compute matching, problem translation, pilot analysis	public data first; trade secrets/research data need separate authorization and purpose limit	project-level least privilege; no default cross-project reuse	project contract/authorization term; delete or return at termination	sensitive content stays out of general models; firms/researchers may reject automation	02 / 03 09

Cross-scenario red lines do not trade tracking for movement, housing, basic services, or public-space access; do not delegate high-risk decisions to unsupervised models; do not extend one scenario's authorization automatically to another.

Before real deployment, applicable data, cybersecurity, medical/care, transport, consumer-protection, and operating professionals must review the actual system under applicable law and contracts.

Concept-design governance requirements only. This does not claim completion of real-world DPIA, cybersecurity certification, medical compliance, cross-border data review, or any statutory approval.

Jing-Zhang City Completeness v0.5 | Brand / VI Concept Direction

Positioning: not an “AI-tech skin” for the city, but a recognizable language for ordinary city capabilities plus opt-out AI.

Core symbol direction: C7 COMPLETE LOOP

“Open loop” = the city keeps becoming more complete

Twin rails reference the Jing-Zhang linear memory; seven nodes reference C7. This concept must

Naming and communication hierarchy

JING-ZHANG CITY COMPLETENESS

Proposition: 城市先完成，AI 再进入

English proposition: Complete the city first, then let AI enter daily life.

Secondary identity: C7 capability tags + three key-area roles

ZHONGZHIYUAN — complete innovation campus

AI ORIGIN COMMUNITY — complete long-term community

DAZHONGSI — complete station-city life district

“Shuangfen Fortress Community” remains a local naming easter egg only: no city-level master-brand role, castle morphology, walling, or enclosure grammar.

C7 icon grammar: text first, icon second; color is never the only information channel

HOME

housing / long-term life
symbol: roof + door

LEARN

school / research / learning
symbol: open page

CARE

childcare / care / service
symbol: hands + point

MOVE

walk / cycle / transfer
symbol: continuous path

GREEN

green / water / shade
symbol: leaf + drop

WORK

R&D / work / startup
symbol: linked nodes

COMMON LIFE

public life / encounter
symbol: shared table

Event / IP extensions (concept names)

City Completeness Week

annual public C7 audit, gap release, public questions, next-iteration action list

Open Test Yard

controlled Zhongzhiyuan tests with teach-back and safety review

City Commons Hall + Jing-Zhang Civic Station

civic living room and honor nodes: real public function first, communication second

VI use rules

- Chinese and English have equal rank; English is not decorative microcopy.
- Every scenario visual carries both a C7 capability tag and “AI opt-out” state.
- Official-boundary/approval status stays visually separate from brand communication.
- No government emblems, official stamps, unauthorized logos, or “implemented” claims.
- Icons always pair text/shape redundancy so color-vision differences do not block meaning.

Final identity requires real copyright, trademark, font, and event-branding review.

Original concept VI for this submission only; not the official identity of the open call, Haidian District, or any government/institution.

Jing-Zhang City Completeness v0.5 | Public-Space Component Library + Three-Layer Wayfinding

Design order: permanently usable ordinary city function → updateable operational information → optional AI enhancement. If the digital layer fails, the space remains understandable and usable.

Seven reusable components

01 C7 ORIENTATION POST

Permanent: direction / distance / C7 tags

equal-rank CN/EN; icon + text; no QR dependency

Digital enhancement

optional voice/multilingual Q&A; offline backup

02 SHADED STAY ISLAND

GREEN + COMMON LIFE

seating, shade, water/charging resource

Digital enhancement

optional environment info without id

03 ROBOT HANDOFF BAY

MOVE + WORK

robots stay out of ordinary paths; physical

Safety rule

low speed, closable, human takeover, t

04 STAFFED SERVICE DESK

CARE + NON-AI BASELINE

booking, appeal, navigation, and help all have a human

Spatial requirement

accessible counter, clear hours, emergency contact

05 COMMUNITY SHARED TABLE

COMMON LIFE

free core hours, public booking rules

AI scheduling

advisory only; fairness/conflicts can

06 ACCESSIBILITY CONTINUITY NOT

MOVE + CARE

ramps/rest/tactile/light exist before a

temporary-obstacle AI is an extra al

07 JING-ZHANG MEMORY RAIL

CULTURE + LEARN

dates, people, engineering, commu

Multilingual layer

fixed CN/EN + optional multilingual

Shared component rules

- Real daily function first; communication/AI second.
- Screens never replace seating, lighting, ramps, or physical signs.
- Devices never intrude into fire access, tactile paths, circulation, mainten
- C7 tags are common; materials may differ by key area.

Final dimensions, structure, materials, and devices need professional design.

Three-layer wayfinding: start with “still works when power is off”

L1 PHYSICAL□ALWAYS-ON

direction, distance, accessibility, public service, hazard boundary, fixed heritage text

equal-rank CN/EN, icon+text, color not sole encoding, night readability

failure mode: movement and help still work with no power/network/phone

Owner: spatial/facility operator

L2 OPERATIONS□CHANGEABLE

hours, temporary closures, events, test status, queues, restoration info

every item has update time + responsible role; stale info is removed

failure mode: uncertainty/emergency switches to staffed notices

Owner: information updater + on-site human review

L3 OPTIONAL AI□OPT-IN

multilingual Q&A, personalized routes, scenario explanation, booking assistance

traceable source, minimal data, human takeover, exit recovery

failure mode: shut AI and fall back to L1/L2 with no loss of basic service

Owner: AI service role + corresponding public-service operator

International communication syntax

Each public node answers these five questions in Chinese and English, replacing “future-tech” slogans with function, rights, and responsibility.

Concept component library only; not construction drawings, a procurement list, facility permit, or official wayfinding standard.

Public-space components and wayfinding

Concept proposal · provisional geometry is not an official redline · AI remains optional and stoppable

Jing-Zhang City Completeness v0.5 | Public Honor Landmarks + Annual Events + Conversion

A landmark is not a sculpture list: it first performs a public function, then makes transparent and verifiable achievements worth a purposeful visit.

Three AI public honor / pilgrimage nodes

Annual event rhythm: every event creates evidence for the next design iteration

Developer community and scenario-open operations: from public problem to long-term adoption

Brand/IP use City Completeness Week / Open Test Yard / City Commons Hall / Jing-Zhang Civic Station are concept names for this submission only; real event brands, trademarks, sponsorship, organizer relationships and attraction/conversion mechanisms require s

Concept operations system only; not a government event plan, fiscal commitment, investment contract, official award or confirmed operator.

02 | C7 Land-use + Civic Base Structure

13 conceptual land-use features; allowed codes only; AI does not create a new statutory land-use class

Legend

- Residential 0701
- Community service 0702
- Research 0802
- Culture 0803
- Education 0804
- Commercial service 05
- Park green 1401

Design discipline

- Concept area ≠ statutory zoning
- conceptual_floors ≠ approved height
- Six segments are work zones, not administrative communities

Concept proposal · provisional geometry is not an official redline · recalculate when official data arrives

Land-use structure

03 | Three Key Areas: C7 Gaps + Completion Tasks

Differentiation comes from functional gaps, not three visual themes

Key-area tasks

1. Zhongzhiyuan innovation campus

Announced ~192.1 ha | R&D + controlled testing + civic exchange + daily services

2. AI Origin long-term community

Announced ~104.3 ha | Long-term housing + care + shared work + civic living room

3. Dazhongsi station-city district

Announced ~72.0 ha | Transfer + commerce + culture + ordinary urban life (boundary pending)

Shared baseline: public space serves ordinary life first; tests are closable and auditable; ordinary routes are not default test beds.

Concept proposal · provisional geometry is not an official redline · recalculate when official data arrives

Three key areas

04 | Mobility · Blue-Green · Civic Space

The civic green spine first serves walking, cycling, accessibility, shade, stormwater and free staying

Public-first rules

- No account / no app required
- AI guidance is optional
- Six E-W links are intentions, not road redlines
- Transit exits, structures and parking await professional data

- 绿地 / Green
- 公共空间 / Civic space
- 慢行联系 / Slow mobility

Concept proposal · provisional geometry is not an official redline · recalculate when official data arrives

Mobility and blue-green system

05 | Metrics · Evidence · Data Gaps

Known values, conceptual design quantities and unknown statutory/engineering quantities are kept separate

Critical data gaps

- Official precise site + three key-area polygons
- Official FAR / height / road redlines / heritage / fire / utilities
- Cleared building, tenure, household and service-capacity survey
- Verified road widths, parking, transit interfaces and engineering constraints

Recalculation trigger: when official geometry or key controls arrive, recompute land use, buildings, roads, green/civic space, phasing, metrics, drawings and HTML.

Concept proposal · provisional geometry is not an official redline · recalculate when official data arrives

Metrics and evidence gaps
