

YOUR TURN JING-ZHANG

Turning human-AI turn-taking into civic space

01 / PREMISE

YIELD

AI does not interrupt. The city yields first. Everyone gets a next turn.

READABLE / STOPPABLE / REVIEWABLE

SPINE / 4548

SYSTEM AT A GLANCE

01 ONE SPINE

civic conversation spine

03 THREE ROUNDS

validation / co-creation / exchange

06 SIX YIELD COURTS

public pause nodes

12 TWELVE TURNS

structured scenario cards

09 NINE LAYERS

GeoJSON evidence

Package

- Bilingual narrative, five figures, and offline HTML
- 9 GeoJSON layers, metrics, and three matrices
- 12 scenario cards, 9 work packages, and 3 phases
- A3 booklet, A0 boards, sources, and assumptions

Review boundary

- Provisional geometry supports concept comparison and internal recalculation only
- FAR, height, BCR, demolition, and operating performance remain pending
- High-impact AI retains on-site stop, human takeover, opt-out, and review
- Spatial actions support professional development, not approval commitments

01 / SPATIAL THESIS

ONE SPINE • THREE ROUNDS • TWO WINGS

A civic interface for deciding who gets the next turn—readable, stoppable, and reviewable.

01

A civic spine

A north - south civic conversation spine turns validation, co-creation, and urban exchange into a relay. The boundary is provisional.

ROUND 01

Learn to yield

众智园 / Zhongzhiyuan

ROUND 02

Let everyone speak

AI 原点 / AI Origin

ROUND 03

Hand the stage to the city

大钟寺 / Dazhongsi

TURN LEDGER

12 scenario cards

- 01 yield crossing
- 02 shared curb
- 03 public service
- 04 break co-survey
- 05 health navigation
- 06 learning assistant
- 07 legal material
- 08 maintenance
- 09 event + commute
- 10 AI round table
- 11 oral history
- 12 city pause

DERIVED FROM GEOJSON / EPSG:4548 / PROVISIONAL GEOMETRY

One spine, three rounds, two wings, six yield points, and twelve turns. The civic conversation spine connects validation, co-creation, and urban exchange while every high-impact scenario retains human priority, pause, and takeover.

02 / LAND-USE STRUCTURE

LAND USE IS AN INTERFACE, NOT AN END STATE

Seven formal land-use interfaces carry reversible, stoppable, reviewable AI overlays.

LAND-USE PALETTE

- 01 Research + innovation
- 02 Education + transfer
- 03 Jing-Zhang park green
- 04 Walking + cycling / public realm
- 05 Culture + civic services
- 06 Industry + commercial services
- 07 Community services

DESIGN RULE

AI does not invent a new land-use class: start with civic use, then add operating rules.

INTERFACE LOGIC

	GREEN	stable access
	AMBER	controlled test
	RED	stop / retire

TEMPORARY PARTITION / NOT A STATUTORY CONTROL

LAND USE → OPERATING RULES → PUBLIC VALUE

Seven land-use interfaces cover the provisional site. AI functions operate as overlays within research, education, culture, commerce, community, green, road, and plaza uses rather than inventing a statutory AI land-use class.

03 / KEY AREAS

THREE KEY AREAS, THREE CIVIC ROUNDS

Not three showrooms, but three scales at which the same civic rules enter the city.

01

Zhongzhiyuan

Learn to yield

- robot passing bay
- open standards walk
- human takeover hall

CONCEPTUAL / PROVISIONAL

02

AI Origin

Let everyone speak

- co-creation round table
- paper / phone entry
- quiet waiting

CONCEPTUAL / PROVISIONAL

03

Dazhongsi

Hand the stage to the city

- shared-curb timetable
- international round table
- everyday passage first

CONCEPTUAL / PROVISIONAL

THREE ROUNDS / ONE PUBLIC RULE SET

The three key areas teach yielding, let everyone speak, and hand the stage to the city. Nine building objects are capacity tests only; they are not building-level retain-renovate-demolish, intensity, or approval claims.

04 / MOBILITY + BLUE-GREEN

A NETWORK THAT KNOWS HOW TO YIELD

A red civic spine, six cross-branches, and blue-green commons form a stoppable access protocol.

YIELD PROTOCOL

- 01

People first

Ground crossings and continuous accessibility precede automated shuttles.
- 02

Status visible

Devices slow, stop, and expose intent.
- 03

Stoppable on site

On-site stop officers and staffed desks retain takeover authority.
- 04

Ordinary access

Pass, pay, and ask for help without an app.

SIX YIELD COURTS

06 public pauses

Branches and courts are not road redlines; they mark where explicit coordination is needed.

BLUE-GREEN COMMONS / HUMAN STOP AUTHORITY

Six yield branches and the blue-green corridor coordinate commuting, robots, events, and public services. Six yield courts retain ordinary passage, on-site stop officers, and staffed service desks.

05 / METRICS + EVIDENCE

EVERY NUMBER HAS A SOURCE. EVERY UNKNOWN HAS A PLACE.

From spatial geometry to civic rules: an auditable, handoff-ready, recalculable evidence chain.

Provisional area

11,412,825

site_area_sqm · sqm

Concept green area

1,744,080

green_space_area_sqm · sqm

Concept public space

97,195

public_space_area_sqm · sqm

Scenario cards

12

scenario_card_count · count

Yield courts

6

yield_court_count · count

Concept network

road_network_length_m · m

PENDING CONTROL / OPERATING EVIDENCE

FAR

floor area ratio

HEIGHT

building height

BCR

building coverage

TAKEOVER

human takeover

When official data arrives, replace boundaries, recalculate metrics, redraw figures, and refresh hashes through the same route.

formal-review-ready

4 gates pass · 3 provisional geometry notices · 0 blocking errors

EVIDENCE IS A DESIGN MATERIAL

AUDIT ROUTE

- 01

GeoJSON

geometry / features
- 02

EPSG:4548

project + measure
- 03

metrics.json

formula + confidence
- 04

figures + HTML

human-readable
- 05

self-check

four gates

Calculable metrics come from EPSG:4548 geometry. FAR, height, Building Coverage Ratio, demolition, and operating performance remain pending official evidence or field samples.
