

Jing-Zhang Co-Intelligence Line / Interface Booklet

Concept design under provisional geometry; not a statutory plan or engineering conclusion

One heritage civic spine / three collaboration interfaces / two supporting

This booklet derives from the same GeoJSON, metrics, and matrices. Drawings support reading; structured files remain authoritative.

Jing-Zhang Co-Intelligence Line: Heritage Spine to Collaboration Interface

Figure 01 | One civic spine, three translation stations, two supporting wings

PROVISIONAL CONSTRAINT | CONCEPTUAL DESIGN

Co-intelligence interface

A shared interface links research, testing, demonstration, and daily services through visible, hostable civic nodes.

Three translation stations

Zhongzhiyuan: standards and tests
AI Origin: open source and translation
Dazhongsi: product and city interface

Use boundary

The provisional boundary is for generation, discussion, and self-check only. Recalculate all layers and metrics after official polygons arrive.

Land use is the carrier of collaboration interfaces

Figure 02 | Five adaptable bands are linked by a civic spine

PROVISIONAL CONSTRAINT | CONCEPTUAL DESIGN

What it expresses

Five bands cover the provisional site. They are neither statutory zones nor parcels. Official controls, ownership, and field survey must recalibrate the next design pass.

Co-intelligence moves

Research reaches an explainable public edge
Scenarios enter pausable test settings
Feedback returns to co-creation and review

Areas are recalculated in EPSG:4548 from the provisional boundary and are not statutory land-use controls.

Three key areas: accelerate, translate, enter the city

Figure 03 | One civic protocol in three urban contexts

PROVISIONAL CONSTRAINT | CONCEPTUAL DESIGN

Zhongzhiyuan
Accelerate

- ▮ Standards and safety workbench
- ▮ Garden testing and exchange
- ▮ Low-impact Qinghe interpretation

Concept only; pending official polygons and controls

AI Origin Community
Translate

- ▮ Open-source co-creation table
- ▮ Campus-park walking seam
- ▮ Talent service and release

Concept only; pending official polygons and controls

Dazhongsi
Enter city

- ▮ Station-facing city interface
- ▮ Device experience and service
- ▮ Walkable international exchange room

Concept only; pending official polygons and controls

Mobility and blue-green: make interfaces part of daily movement

Figure 04 | North-south spine + three east-west public seams

PROVISIONAL CONSTRAINT | CONCEPTUAL DESIGN

Design principle

Improve daily public space and walking first; test technology second.

Review boundary

Lines are conceptual, not road alignments, bridges, tunnels, or engineering.

Evidence chain: known, derived, pending

Figure 05 | Link every judgment to source, geometry, metric, and human review

PROVISIONAL CONSTRAINT | CONCEPTUAL DESIGN

Provisional site area 11.413 km²

Concept public-space ratio 0.92%

Concept green ratio 10.83%

Concept building footprint 55,671 m²

Pending official data: FAR, height, road redlines, ownership, municipal capacity, and heritage controls.
