

COMMONS LINE: Centennial Jing-hang Civic AI Corridor

COMMONS LINE Spatial Evidence Overview

One civic innovation spine, three validation districts

1	3	5	10
Civic spine	Validation rooms	User groups	AI scenarios

1 / 3 / 5 / 10

- One spine
- Three civic rooms
- Five personas
- Ten AI scenarios

GeoJSON is authoritative.
Figures support reading but
do not replace geometry,
metrics or matrices.

Provisional geometry for design discussion. Recalculate the full package when official polygons arrive.

Regional collaboration: city-scale validation interfaces

Partner	Primary interface	COMMONS LINE role	Boundary
Beiwei	Talent, services, co-testing	Everyday-service feedback	Concept only
Future Science City	Outputs, talent, demand	Validation and demonstration	No signed partnership implied
Huairou Science City	Major facilities and AI4S	Evaluation and communication	No access presumed
Beijing E-Town	Manufacturing and terminals	Urban product feedback	No procurement commitment
BTH nodes	Supply chains and events	Annual events and review	Separate confirmation required

Internal three-area/two-wing coordination

✕hongguancun service wing	Three civic validation rooms	✕iaoyue River scenario wing
IP • capital • talent	Validate • opt out • human review	Everyday services • co-testing

Identity hierarchy and three civic validation rooms

Three Distinct Key–Area Concepts

Validation garden, open–source district, station–city living room

Zhongzhiyuan
Open Validation Garden

- Reservable model evaluation
- Standards and red–team workshops
- Low–carbon computing interpretation

PROVISIONAL

AI Origin
Near–Campus Open Source

- Open–source releases and archive
- Transfer and talent services
- Campus–community links

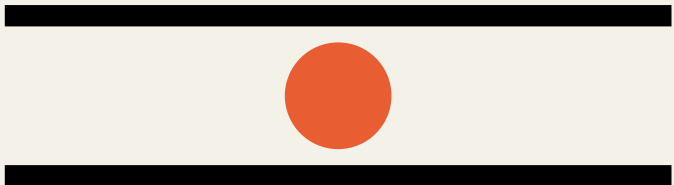

PROVISIONAL

Dazhongsi
Station–City AI Living Room

- Transit and four–quadrant links
- Smart terminals and city demos
- International exchange and services

PROVISIONAL

Provisional geometry for design discussion. Recalculate the full package when official polygons arrive.

共智轨 / COMMONS LINE

Level	Use
Primary mark	Parallel rails + open node
Wayfinding	Sleeper ticks, mileage, contributions
Event sub-brand	Global AI Commons Week etc.

Minimum operating contract for ten scenarios

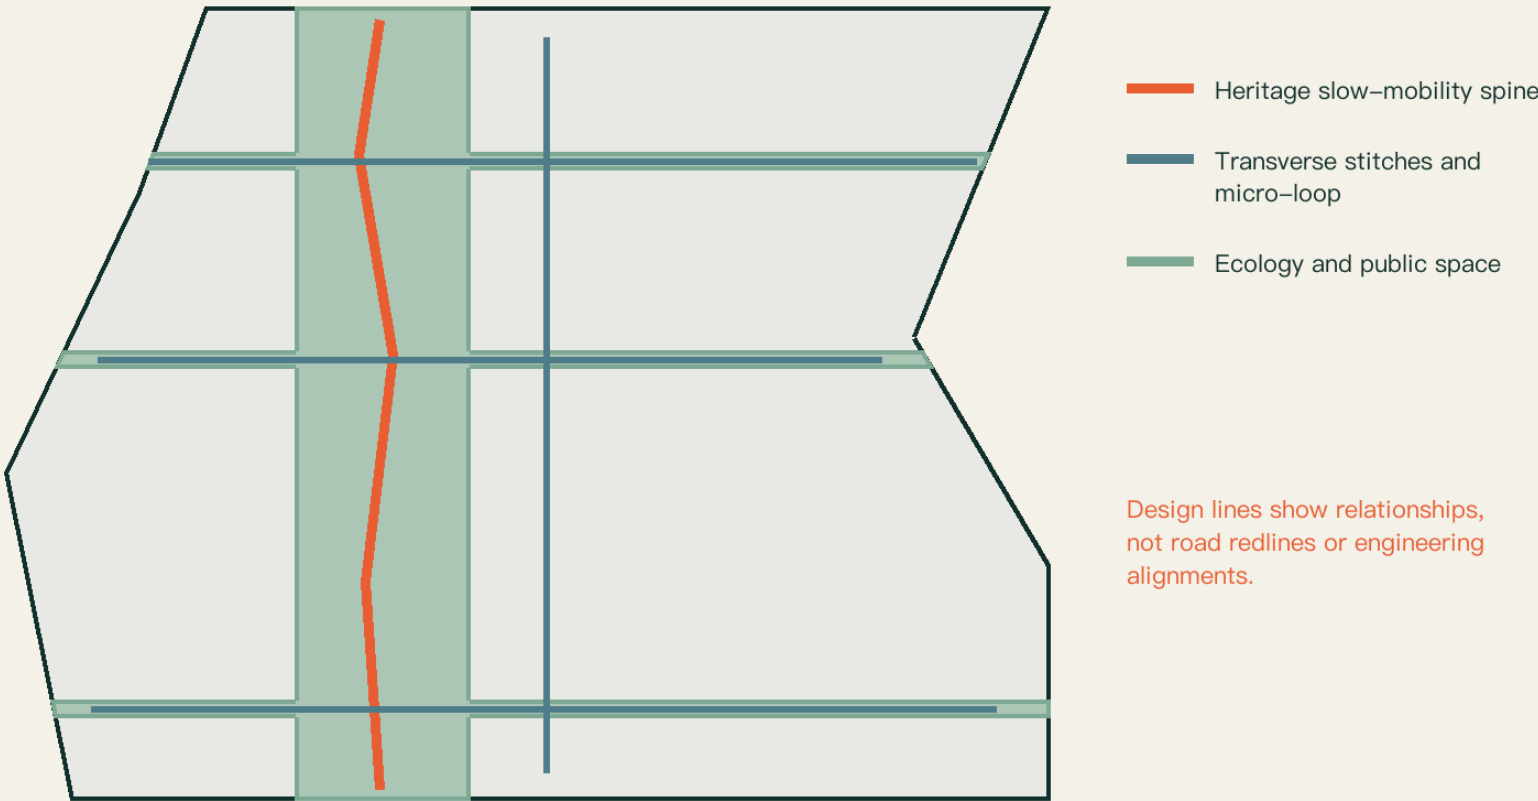

Scenario	Proposed operator	First-round indicator	Pause/exit threshold
Release hall	Ops centre + university/community	☒2 quarterly; 100% traceable	Two inactive quarters or unclear rights
Safety sandbox	Evaluator + named safety owner	100% risk log and human review	Unauthorised data, failed takeover, major event
Computing explainer	Facility + energy manager	Monthly energy/cooling update	30 days missing data or failed fire condition
Mobility assistant	Space operator + co-test group	Three target groups; 100% advice review	Unsafe route or no non-digital path
Transfer desk	Transfer office + park services	Traceable quarterly referrals	Two inactive quarters or undisclosed conflict
Dual-channel service	Local service + on-site staff	Offline always; 100% human transfer	Offline failure or no human transfer
Railway guide	Culture operator + heritage adviser	100% sources; monthly correction log	Major error, rights or heritage risk
Terminal living room	Venue + product owner	100% data/responsibility disclosure	Unnecessary data, no opt-out, repeated failure
Event review desk	Organiser + safety lead	100% named review of high-risk alerts	No owner, major error, failed emergency process
Commons Week	Secretariat + venue partners	Annual; public rules and evaluation	Safety, accessibility or rights failure

Mobility, blue-green systems and phasing

Phase	Action	Prerequisite
Near	Reversible co-tests and dual channels	Named owner and human takeover
Mid	Campus transfer and community services	Survey, ownership, operating agency
Long	Station integration and global events	Transit, utilities, fire, heritage clearance

Mobility, Blue-Green and Public-Service Network

One north-south spine, three transverse stitches, one micro-loop

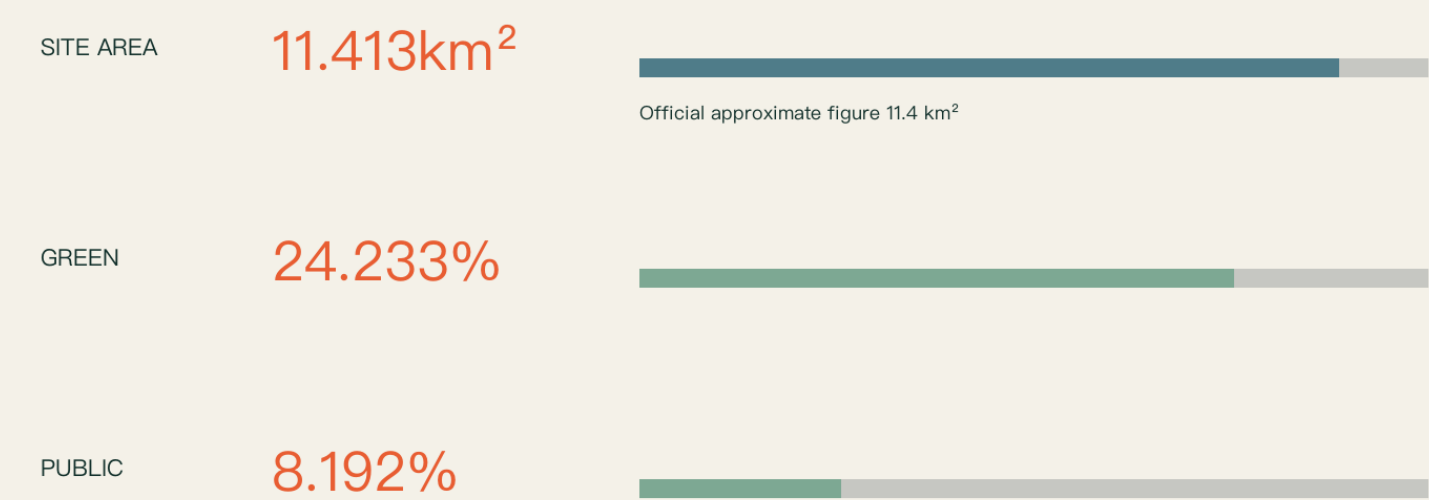

Provisional geometry for design discussion. Recalculate the full package when official polygons arrive.

Evidence, risk and recalculation triggers

Current reliable claim	Recalculate when triggered
Approx. 11.413 km ² provisional model	Official overall/key-area polygons
Green/public ratios compare options	Controls, roads, surveys, ownership, utilities, fire, heritage
All AI scenarios retain human/exit paths	Any scenario enters trial, procurement or public service

Metric Recalculation and Uncertainty

Recomputable values without overstated precision

All three values are recomputed from submitted geometry at low confidence. Positional accuracy awaits official polygons.

Provisional geometry for design discussion. Recalculate the full package when official polygons arrive.
