

JINGZHANG LOOP / PLACE-ANCHORED OVERVIEW

Real place anchors make one reversible civic network legible.

JZ / 01

READ THIS FIRST

01 / PLACE ANCHORS

AI Origin Community • Chengfu Rd 45-1
Jingzhang Railway Heritage Park • Wudaokou segment
Dazhongsi Metro • Lines 12 / 13

02 / DESIGN NETWORK

One heritage slow spine + two east-west seams.
The line is a conceptual connection, not a road redline.

03 / CIVIC JOBS

VERIFY tests; TRANSLATE explains; EXCHANGE brings services into station-city life.

One Jingzhang
heritage slow spine
connects the three
key areas.

Two cross-city
seams and three
interface stations
return AI to daily
life.

Four safeguards:
legible, opt-out,
stewarded, and
rollback-ready.

Five interface bands: research, blue-green, industry service, community, and culture.

These are conceptual relationships, not statutory land use, controls, or ownership.

Every interface keeps low-tech, human, and accessible entry points.

FIVE INTERFACE BANDS

Land-use is a connector: every band returns to public space, mobility, and reversible services

JZ / 01

Land-use codes follow the site-package subset; ratios are design-layer values, not statutory controls.

SPATIAL STRUCTURE

- A**
Research + validation
Models, edge devices, standards, safety
- B**
Heritage blue-green floor
Slow mobility, water, free stay
- C**
Industry service + public ground
Turn outputs into public interfaces
- D**
Talent life + community service
Work, life, and learning stay reachable
- E**
Culture translation + open learning
Jingzhang, Zhongguancun, and AI

Zhongzhiyuan
verifies: models,
edge devices,
standards, and
safety.

AI Origin
translates:
near-campus
knowledge and
community life.

Dazhongsi
exchanges:
station-city
services and public
premieres.

THREE STATIONS / PLACE + PUBLIC JOB

A single slow spine, three different urban jobs, and one explicit data boundary.

JZ / 01

01 / VERIFY

ZHONGZHI PARK

Controlled testing, standards, safety display.
Public POI search is ambiguous; this card uses the taskbook key area, not a map result.

02 / TRANSLATE

AI ORIGIN COMMUNITY

Chengfu Road 45-1; near Wudaokou.
Translate research into open learning, talent services, and everyday explanations.

03 / EXCHANGE

DAZHONGSI

Metro Lines 12 / 13.
Four-quadrant walking, station-city services, and multilingual public guidance.

The point anchor and the provisional polygon can disagree. That is a data condition to disclose and later reconcile, not a reason to invent a boundary.

The spine and three seams prioritize crossings, shade, access, and cycle parking.

Green and public space create reservable, pausable civic capacity.

Road centerlines are conceptual connections, not engineering alignments.

MOBILITY AS CIVIC ACCESS

One north-south spine, three cross-links, and blue-green nodes return AI services to daily reach

JZ / 01

ACCESS STRATEGY

- SPINE**
Walking and cycling continuity first
Park, stations, and three districts become one route
- SEAMS**
Make safe crossings the first move
Shade, access, parking, and loading are checked together
- BLUE/GREEN**
Green and public space overlap
Testing opens only after public and ecological capacity
- SERVICE**
Transit, paper index, human desks
The city still works when the digital layer fails

Road centerlines express conceptual connections only; they are not road redlines, rail alignments, or engineering schemes.

12 scenario cards,
including four
industry validation
tests; six user
groups.

Each scene has data
minimization, human
review, exit
conditions, and
stewards.

Phase one tests,
phase two updates
space, phase three
maintains; failures
can roll back.

Geometry, metrics, matrices, text, drawings, and web share one evidence chain.

Official boundaries trigger a full recompute; controls, ownership, heritage, and utilities remain pending.

This is an open AI co-creation proposal, not an approved government decision.
