CENTENNIAL JING-ZHANG AI INNOVATION BELT

JING-ZHANG OPEN GROUND

JING-ZHANG OPEN GROUND

Turn a century-old railway into a nine-kilometre AI city prototyping ground.

Railway = spine · east-west links = stitches · three grounds = industry-to-life loop

Author: Wang Haoran (王浩冉) · Conceptual urban design submission

By 2035 Jing–Zhang is not a technology showroom, but a civic intelligence spine that people can enter, industries can test in and the city can learn from.

**RAIL**

civic intelligence spine

WINGS

transfer + applications

GROUND

verify + co–create + live

OS

rights + evidence + stop

Contents + reading route

Spatial idea first; industry and mobility next; three detailed grounds, twelve scenarios and delivery last.

01	01 Define the proposition	01—04	02	02 Build the spatial skeleton	05—14
03	03 Make industry operate	15—20	04	04 Design three open grounds	21—32
05	05 Deliver daily AI life	33—40			

SPATIAL JUDGEMENT

Spatial idea first; industry and mobility next; three detailed grounds, twelve scenarios and delivery last.

DESIGN ACTIONS

Five chapters answer why, where, how industry operates, how three key areas are designed, and how accountable AI becomes daily urban life.

WHY THE NEXT PAGE

This decision creates the need for the next page: “Task–response matrix”.

Task–response matrix

Each of the six official tasks is answered by space, figure, metric and evidence.

01 Development vision → masterplan figure + metric + source	02 AI ecosystem → industry chain figure + metric + source
03 Urban form → three detailed plans figure + metric + source	04 Mobility + services → five stitches figure + metric + source
05 Infrastructure → component kit figure + metric + source	06 Heritage park → cultural commons figure + metric + source

SPATIAL JUDGEMENT

Each of the six official tasks is answered by space, figure, metric and evidence.

DESIGN ACTIONS

Every brief item needs a design claim, spatial figure, verifiable metric and source. Without all four, coverage is incomplete.

WHY THE NEXT PAGE

With coverage established, the proposal now moves from the brief to the real corridor.

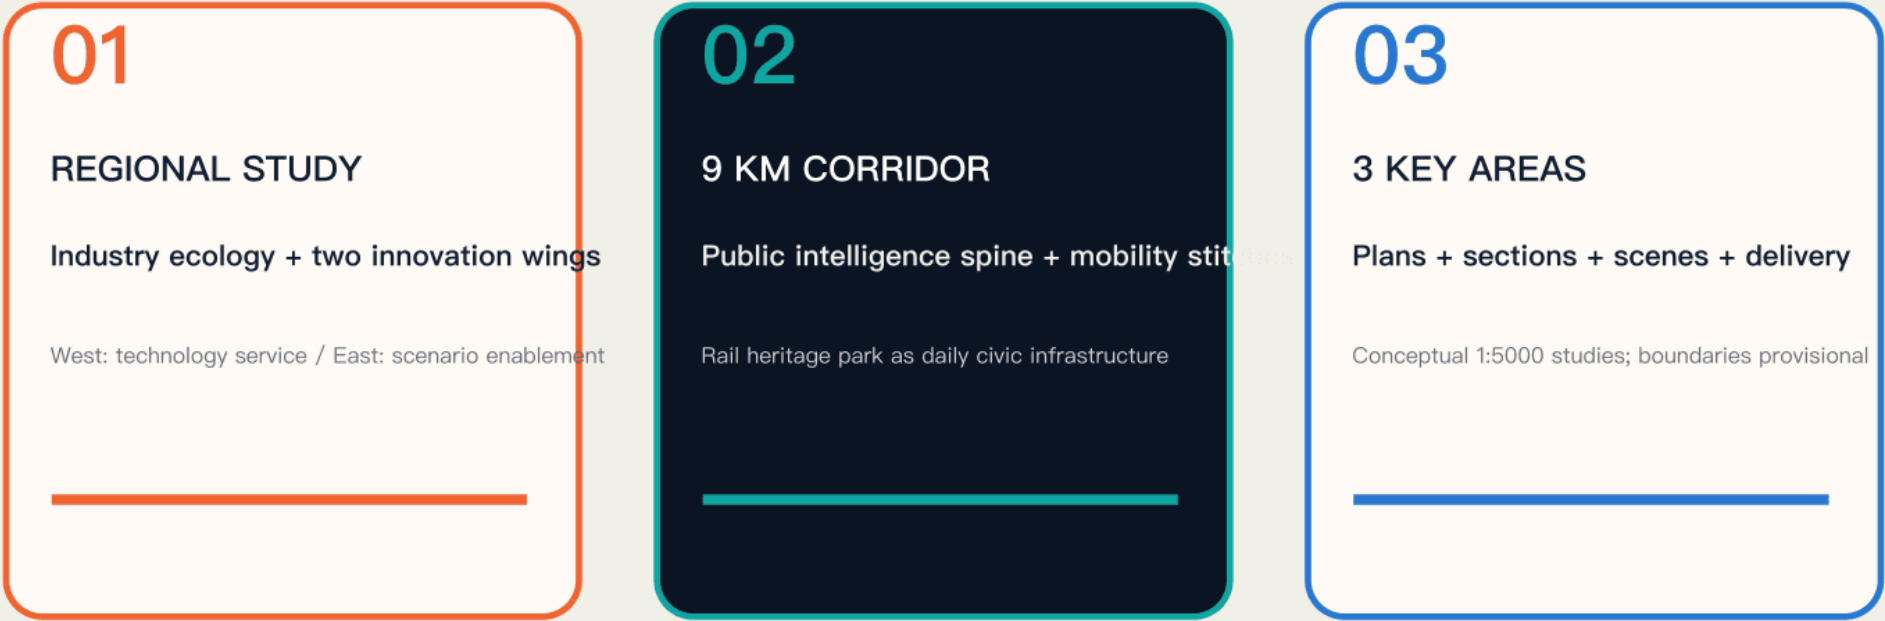

Three design scales

Regional study, nine–kilometre urban design and three detailed key areas become progressively specific.

02 / SCOPE

Three scales, one design argument

Research → overall design → detailed prototypes

The proposal gets more spatially specific as evidence becomes more local.

SPATIAL JUDGEMENT

Regional study, nine–kilometre urban design and three detailed key areas become progressively specific.

DESIGN ACTIONS

The study area connects resources; the nine–kilometre area establishes a shared skeleton; three key areas resolve plans, sections and scenes.

WHY THE NEXT PAGE

This decision creates the need for the next page: “Existing assets”.

Existing assets

Rail heritage, park, universities, industry and neighbourhoods form one innovation infrastructure.

EXISTING ASSETS → DESIGN ROLES

Six existing systems become six concrete project inputs

Named place · current role · proposed interface

- 1 Qinghuayuan heritage**
NOW: rail memory
ADD: guide + question desk
- 2 Jing-Zhang park**
NOW: continuous greenway
ADD: learning + rest spine
- 3 Wudaokou universities**
NOW: knowledge + talent
ADD: courses + open workshop
- 4 Zhongzhiyuan industry**
NOW: AI R&D base
ADD: validation + pilot service
- 5 Dazhongsi communities**
NOW: daily life + commerce
ADD: health + learning + culture
- 6 Three metro gateways**
NOW: regional access
ADD: unified wayfinding + hand-off

REUSE FIRST · ADD ONLY THE MISSING INTERFACE

SPATIAL JUDGEMENT

Rail heritage, park, universities, industry and neighbourhoods form one innovation infrastructure.

DESIGN ACTIONS

Qinghuayuan Station hosts interpretation and a question desk; the heritage park hosts learning and rest; campuses host courses and workshops; Zhongzhiyuan hosts validation and pilots; Dazhongsi hosts health, learning and culture; three transit gateways share wayfinding and service hand-offs.

WHY THE NEXT PAGE

This decision creates the need for the next page: “Three breaks”.

Three breaks

Industry transfer, east–west mobility and everyday–life gaps must be repaired together.

1

INDUSTRY

Research reaches application too slowly

2

MOBILITY

Rail corridor still interrupts east–west walking

3

LIFE

AI remains an event, not an everyday service

SPATIAL JUDGEMENT

Industry transfer, east–west mobility and everyday–life gaps must be repaired together.

DESIGN ACTIONS

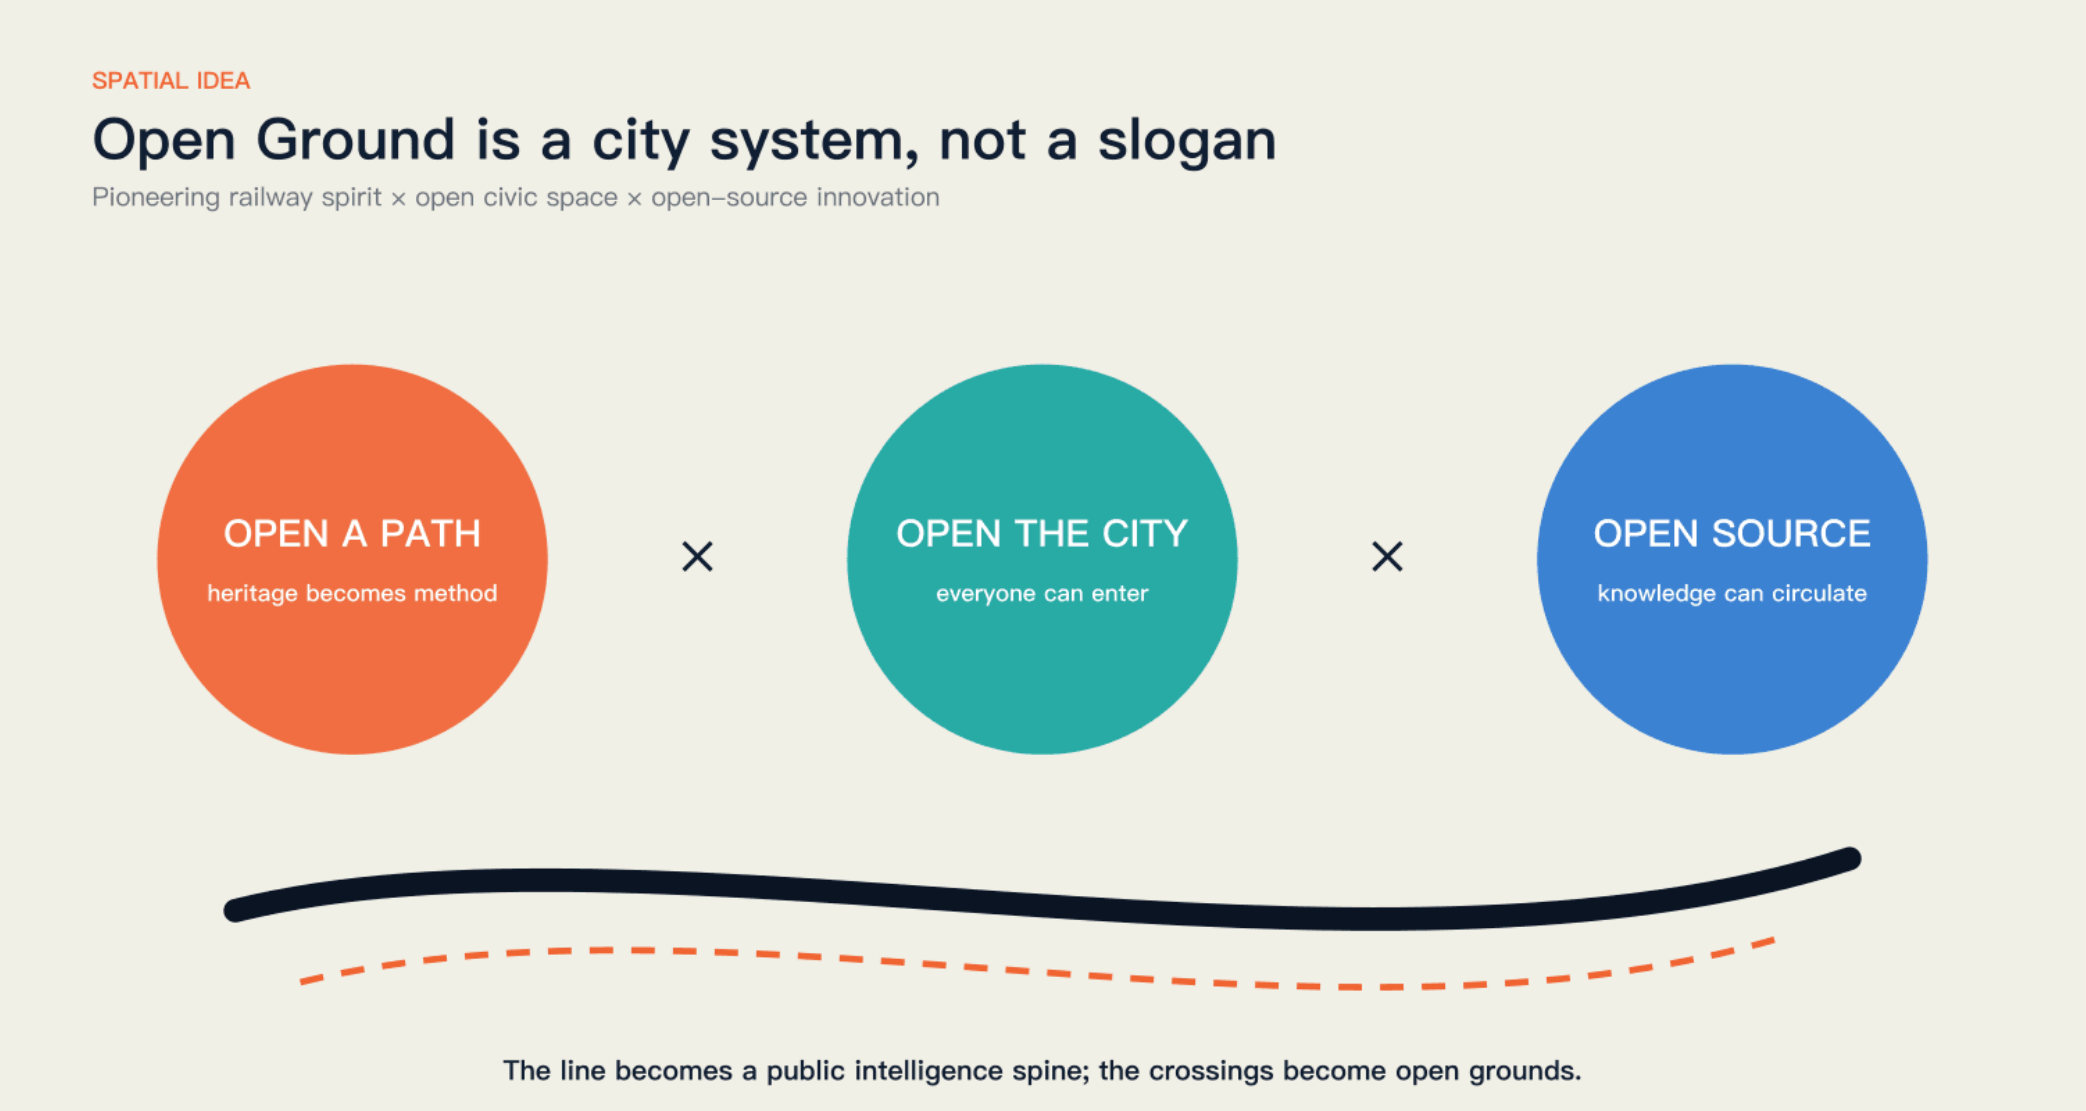

Industry lacks a validation path, walking lacks east–west continuity and residents lack daily AI services. One spatial strategy repairs all three.

WHY THE NEXT PAGE

This decision creates the need for the next page: “What is Open Ground?”.

What is Open Ground?

Railway pioneering spirit, open civic space and open–source innovation become one spatial idea.

SPATIAL JUDGEMENT

Railway pioneering spirit, open civic space and open–source innovation become one spatial idea.

DESIGN ACTIONS

Pioneering recalls the railway, openness enables civic access and open source enables collaboration. Together they define construction and operation.

WHY THE NEXT PAGE

The proposition is now defined; the next page draws it as one masterplan.

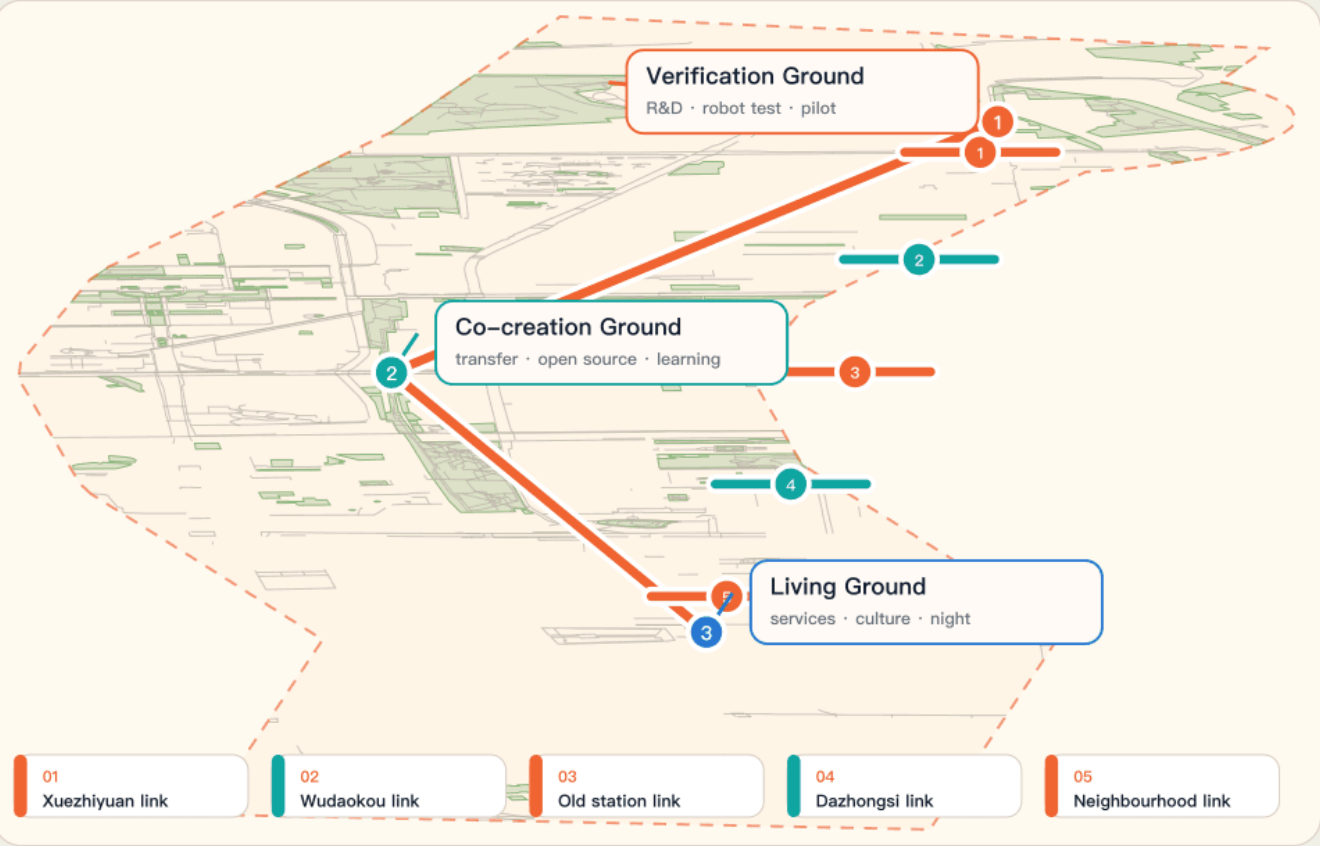

Nine-kilometre masterplan

One public intelligence spine, two innovation wings, three open grounds and five stitches.

01 / MASTERPLAN

A nine-kilometre public intelligence spine

One spine · two wings · three open grounds · five cross-corridor stitches

WHAT EACH GROUND BUILDS

- 1

Verification Ground

Full-stack R&D · robot test · pilot production

BUILD: validation garden · pilot boxes · logistics hand-off
- 2

Co-creation Ground

University transfer · open source · AI education

BUILD: open workshop · learning commons · youth living room
- 3

Living Ground

Agent-native services · culture · night economy

BUILD: quadrant wayfinding · active ground floor · night stage

CONCEPTUAL REGIONAL INTERFACES

Zhongguancun: transfer · IP · global services

Xiaoyue River: robotics · health · media

Future Science City / Huairou: research links

BDA: manufacturing tests · Jing-Jin-Ji diffusion

Coordination proposal · no formal geometry

SPATIAL JUDGEMENT

One public intelligence spine, two innovation wings, three open grounds and five stitches.

DESIGN ACTIONS

The heritage park is the civic intelligence spine; the west wing provides transfer and global services; the east wing enables embodied AI and applications. The three grounds build validation gardens and pilot boxes, open workshops and learning commons, and quadrant wayfinding with active ground floors. Five stitches connect stations, campuses, heritage and neighbourhoods.

WHY THE NEXT PAGE

The masterplan establishes the skeleton; the next five pages explain its operating systems.

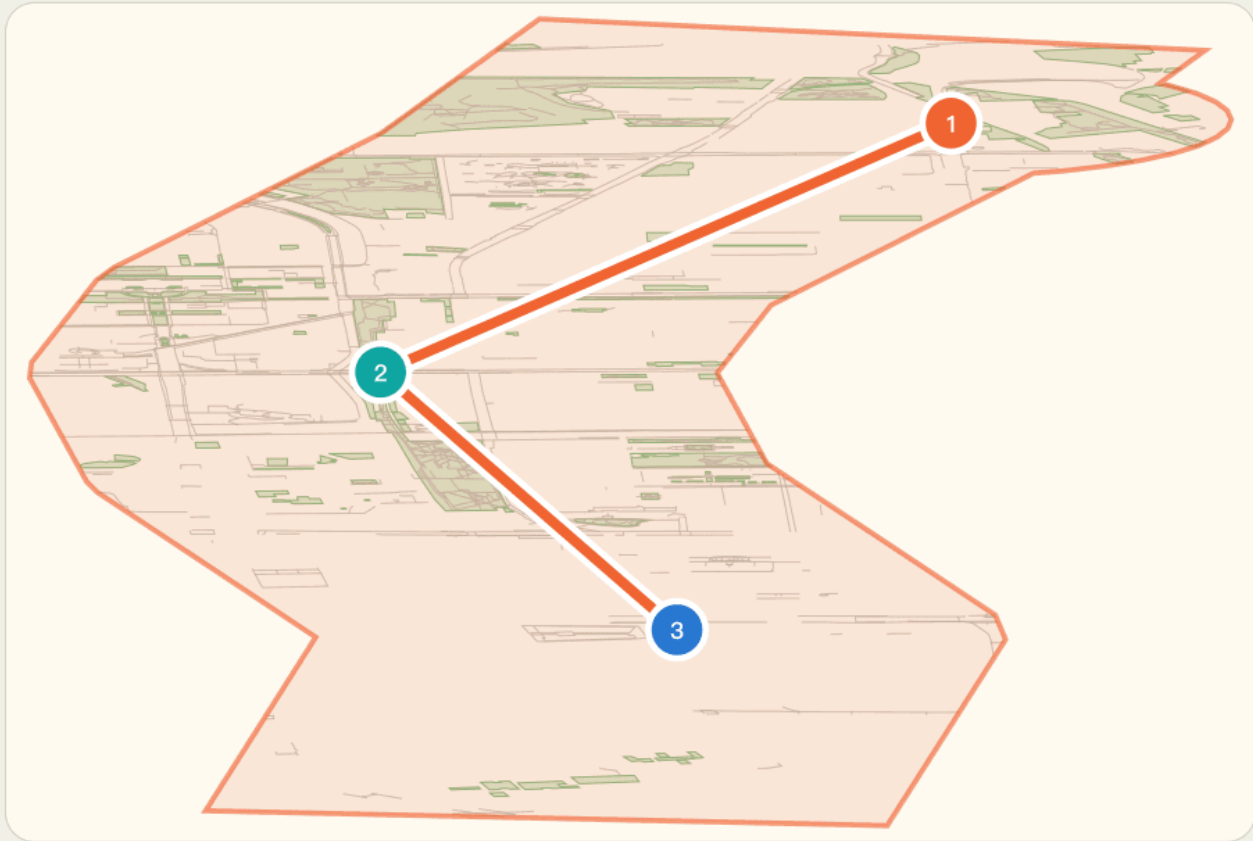

Overall programme

The corridor supports public learning and experience; two wings provide professional services and applications.

02 / PROGRAMME STRUCTURE

Five spatial systems make the masterplan operable

carrier · location · everyday function

The wings are resource networks; coloured areas do not replace statutory land-use facts.

- 01 Civic learning spine**

WHERE: heritage park + station rooms

DOES: walk · learn · rest · review
- 02 West service wing**

WHERE: Zhongguancun service network

DOES: transfer · IP · capital · export
- 03 East application wing**

WHERE: Xiaoyue River application network

DOES: robotics · health · media · public service
- 04 Three open grounds**

WHERE: Zhongzhiyuan / AI Origin / Dazhongsi

DOES: verify · co-create · live
- 05 Five cross-corridor stitches**

WHERE: metro / campus / heritage / quadrants / community

DOES: cross · navigate · hand off · access

SPATIAL JUDGEMENT

The corridor supports public learning and experience; two wings provide professional services and applications.

DESIGN ACTIONS

Five systems work together: the civic spine supports walking, learning and rest; the west wing organises transfer, IP, capital and export; the east wing organises robotics, health, media and public service; three grounds host verification, co-creation and daily life; five stitches provide crossings, wayfinding, hand-offs and access.

WHY THE NEXT PAGE

This decision creates the need for the next page: “Land + industry”.

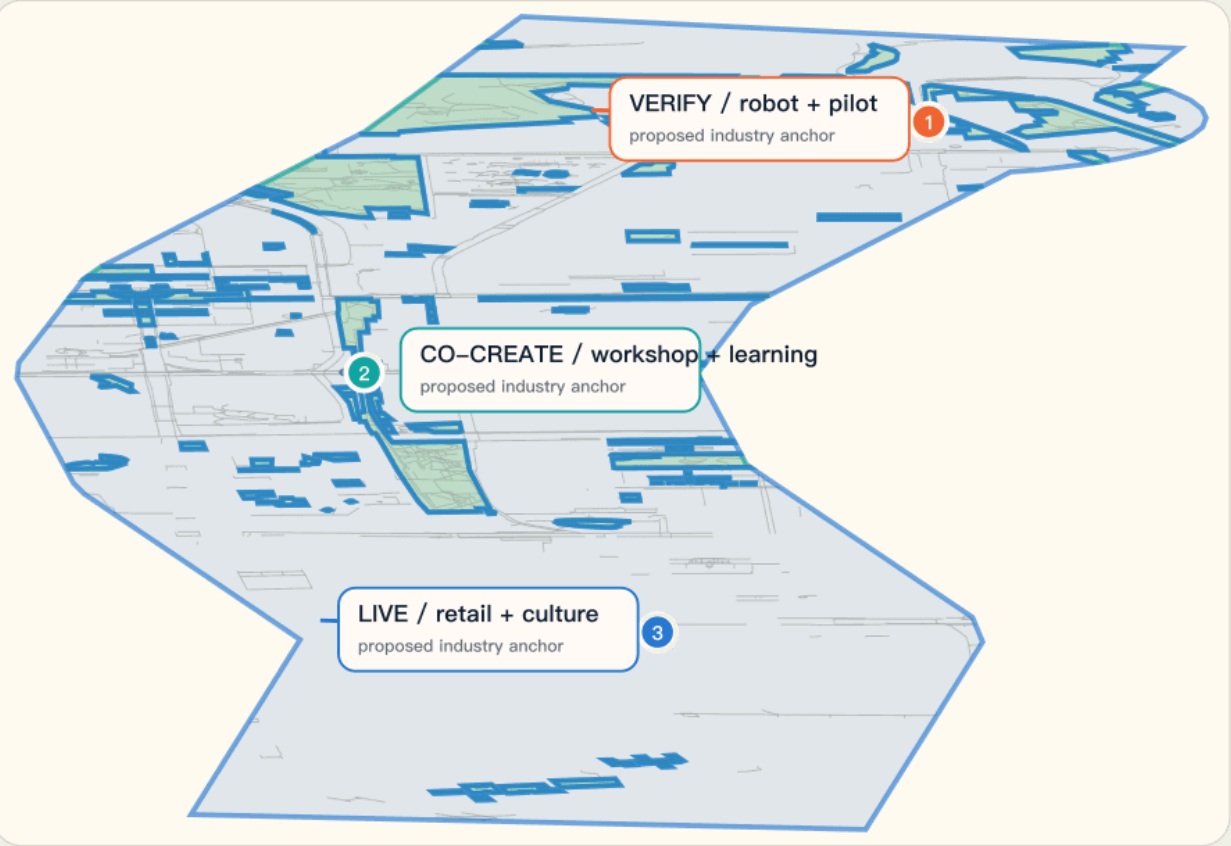

Land + industry

Research, open source, validation, pilot production and application form a continuous spatial gradient.

03 / LAND + INDUSTRY

Production spaces are arranged as a gradient

Lab → open workshop → validation → pilot production → city application

- 01 University labs
- 02 Open-source workshops
- 03 Controlled validation
- 04 Pilot production
- 05 City application

Existing land-use facts remain unchanged.
Coloured layers show conceptual industry

SPATIAL JUDGEMENT

Research, open source, validation, pilot production and application form a continuous spatial gradient.

DESIGN ACTIONS

Labs, workshops, validation gardens, pilot boxes and city interfaces are ordered by maturity, with feedback loops among the three grounds.

WHY THE NEXT PAGE

This decision creates the need for the next page: “East–west stitches”.

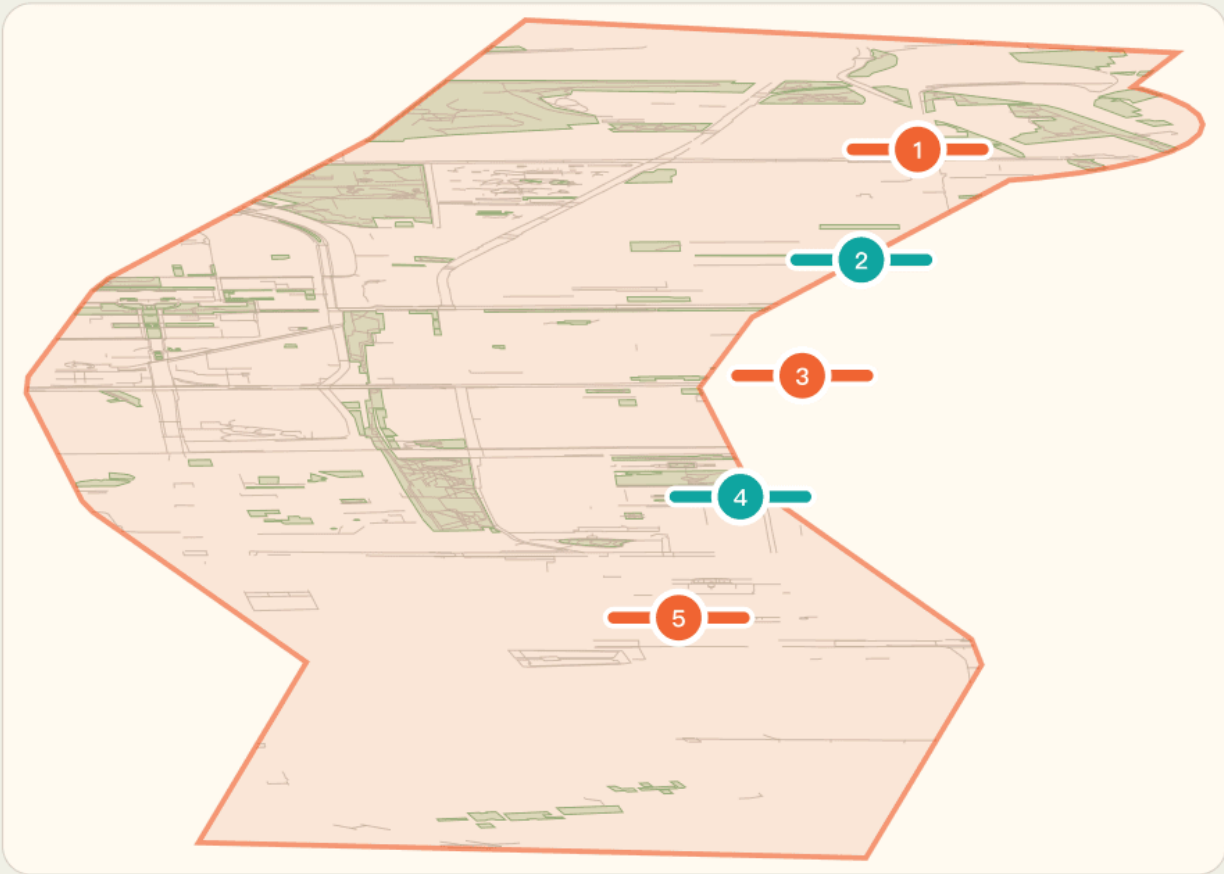

East–west stitches

500 m walking networks and 15–minute services identify priority interfaces.

04 / EAST–WEST STITCHES

Each stitch has a 90–day action and a scale–up trigger

Research–level conceptual location; field verification required

- 1 Xuezhuyuan—Zhongzhi**
90 DAYS: continuous signs + test–garden entry
SCALE WHEN: station access and operator confirmed
- 2 Wudaokou campus–street**
90 DAYS: crossing marks + course/workshop signs
SCALE WHEN: campus opening hours and traffic review
- 3 Qinghuayuan heritage station**
90 DAYS: accessible loop + staffed question desk
SCALE WHEN: heritage and fire–safety approval
- 4 Dazhongsi four quadrants**
90 DAYS: quadrant IDs + step–free route
SCALE WHEN: intersection survey and metro coordination
- 5 Neighbourhood—greenway**
90 DAYS: delivery bay + shade/rest point
SCALE WHEN: community demand and kerb permission

GROUND CONTINUITY FIRST · MAJOR WORKS AFTER EVIDENCE

SPATIAL JUDGEMENT

500 m walking networks and 15–minute services identify priority interfaces.

DESIGN ACTIONS

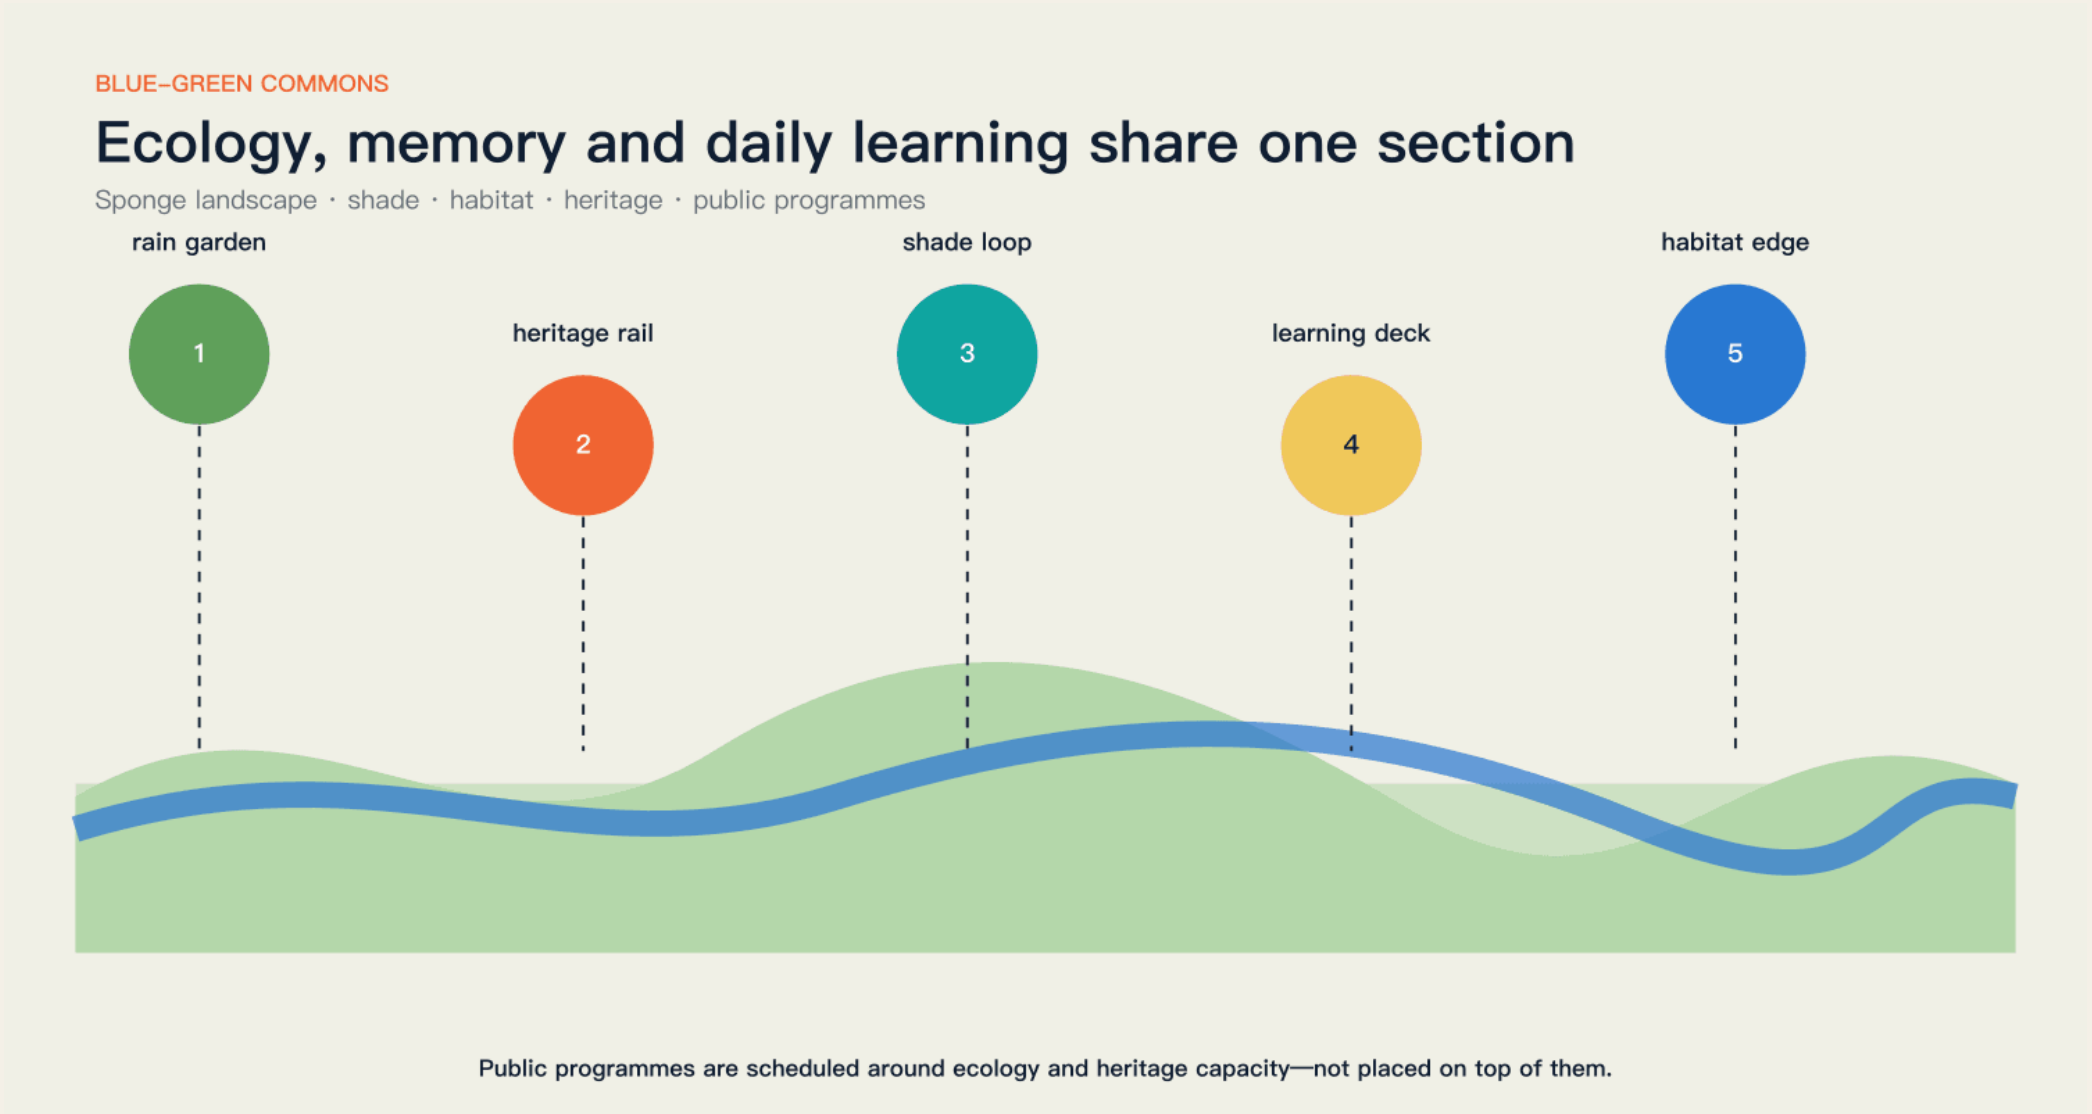

Each stitch has a 90–day action and a scale–up condition: continuous wayfinding at Xuezhuyuan; crossing and course signs at Wudaokou; an accessible loop and staffed desk at the old station; quadrant IDs at Dazhongsi; delivery, shade and rest at the community edge. Expansion follows access, fire, survey or kerb approvals.

WHY THE NEXT PAGE

This decision creates the need for the next page: “Blue–green commons”.

Blue–green commons

The heritage park is both ecological corridor and everyday learning commons.

SPATIAL JUDGEMENT

The heritage park is both ecological corridor and everyday learning commons.

DESIGN ACTIONS

Shade, rain gardens, stopping places and public learning share one park section, so ecology and everyday use reinforce one another.

WHY THE NEXT PAGE

This decision creates the need for the next page: “New infrastructure”.

New infrastructure

Compute, data, robots, energy and sensing are embedded in maintainable small components.

05 / CIVIC AI INFRASTRUCTURE

Every system has a physical carrier, public interface and maintainer

Distributed placement replaces five arbitrary dots

- 1 **Edge compute**
CARRIER: service room / secure cabinet
MAINTAINER: three ground operators
- 2 **Public data trust**
CARRIER: staffed counter + access log
MAINTAINER: AI Origin data steward
- 3 **Robot curb**
CARRIER: marked kerb bay + stop button
MAINTAINER: test operator + street manager
- 4 **Energy microgrid**
CARRIER: existing service room / available roof
MAINTAINER: park facility team
- 5 **Urban sensing**
CARRIER: pole sensor + public dashboard
MAINTAINER: corridor operations team
- SMALL CARRIERS · SHARED INTERFACES · PUBLIC STATUS

SPATIAL JUDGEMENT

Compute, data, robots, energy and sensing are embedded in maintainable small components.

DESIGN ACTIONS

Every infrastructure system names a carrier and maintainer: edge compute enters service rooms managed by ground operators; the data trust has a staffed counter at AI Origin; robot curbs occupy marked test and delivery bays; microgrids use existing service rooms or viable roofs; pole sensors publish status and are maintained by the corridor team.

WHY THE NEXT PAGE

With the civic infrastructure in place, the next chapter explains how industry moves through it.

Precedent translation

Living labs, city science, Fab Labs and participation platforms offer methods, not copied forms.

01

MIT City Science

Method translated: public interface, evidence or operation.

02

Amsterdam Living Lab

Method translated: public interface, evidence or operation.

03

Decidim

Method translated: public interface, evidence or operation.

04

Ars Electronica

Method translated: public interface, evidence or operation.

05

Paris SmartCity LL

Method translated: public interface, evidence or operation.

06

Fab Lab Barcelona

Method translated: public interface, evidence or operation.

SPATIAL JUDGEMENT

Living labs, city science, Fab Labs and participation platforms offer methods, not copied forms.

DESIGN ACTIONS

Precedents contribute methods—open tasks, visible tests, co-creation, long-term operation and public evidence—not copied urban form.

WHY THE NEXT PAGE

This decision creates the need for the next page: “AI industry chain”.

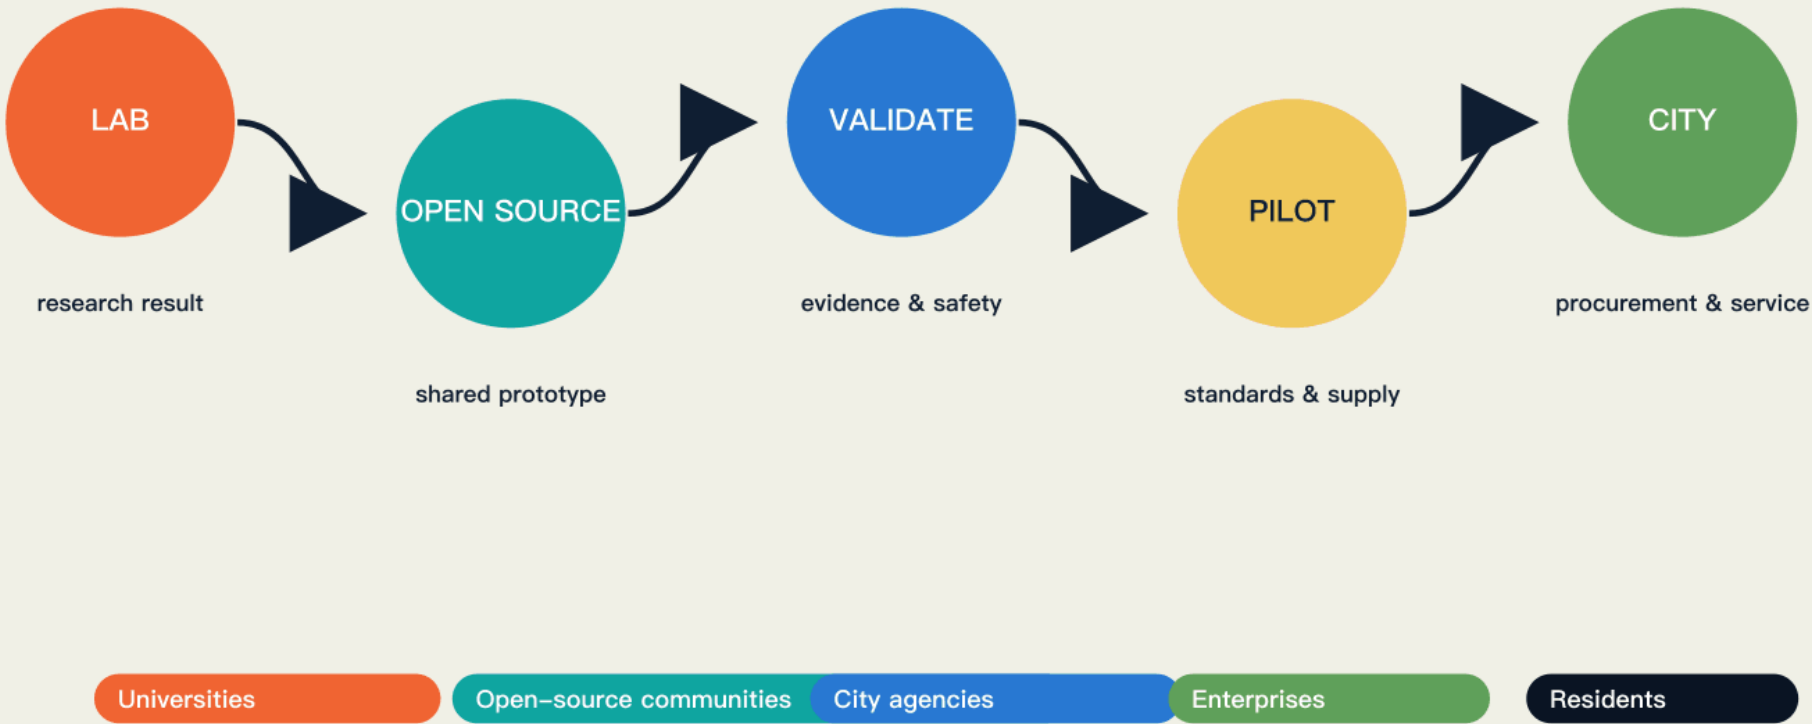

AI industry chain

Research outcomes enter the city through five operable spatial moves.

06 / INDUSTRY CHAIN

From research result to city service in five spatial moves

Every stage has a place, an operator and an exit condition

SPATIAL JUDGEMENT

Research outcomes enter the city through five operable spatial moves.

DESIGN ACTIONS

Each step has a place, operator and exit: universities deliver results, workshops prototype, test grounds produce evidence, pilots organise supply and cities procure services.

WHY THE NEXT PAGE

This decision creates the need for the next page: “Three grounds + two wings”.

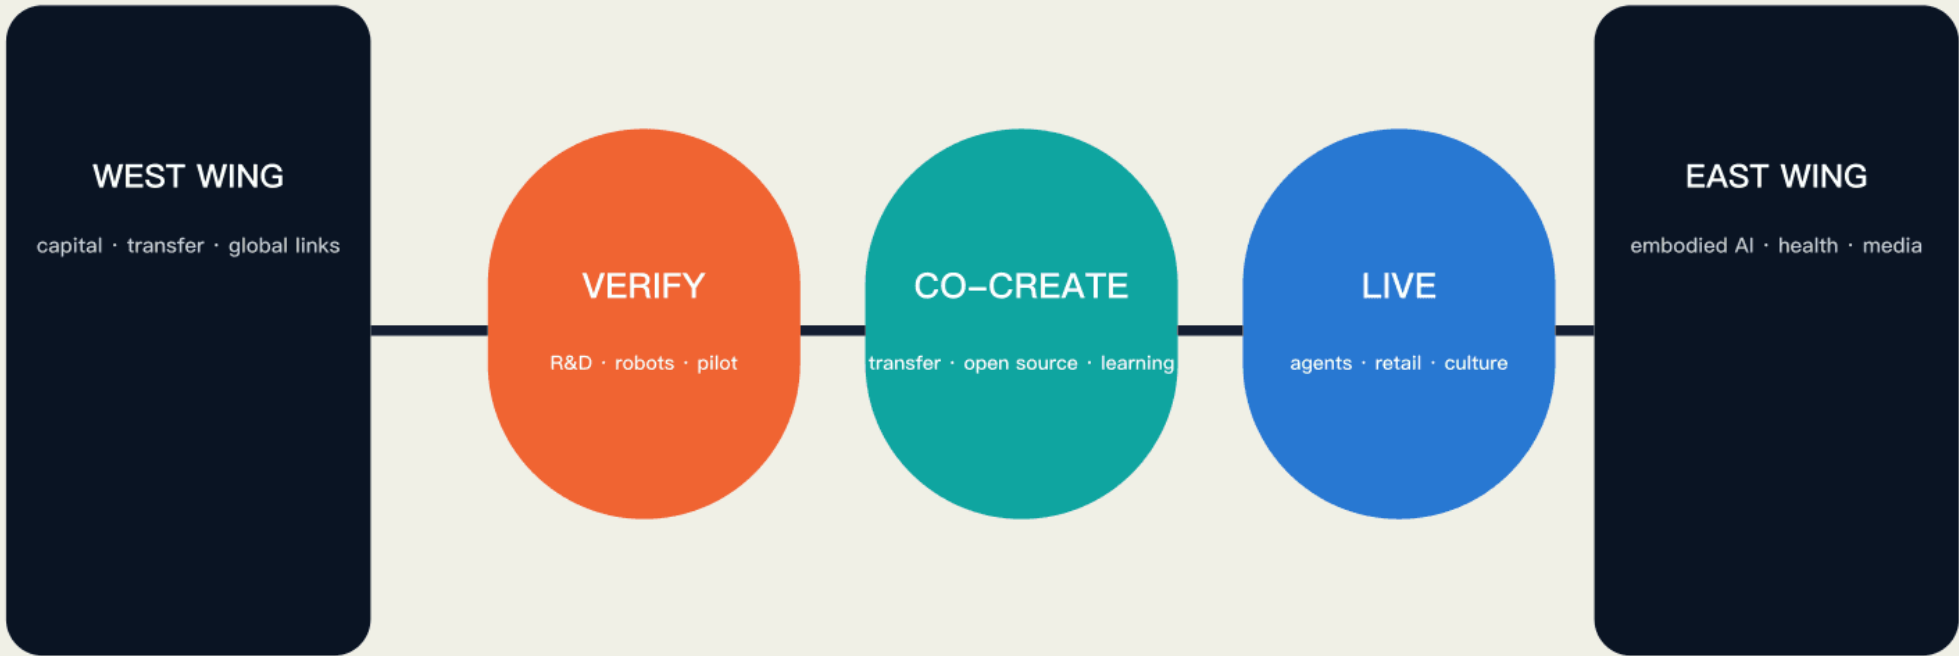

Three grounds + two wings

Zhongzhiyuan verifies, AI Origin co-creates, Dazhongsi brings AI into daily life.

THREE GROUNDS + TWO WINGS

Specialisation creates a complete innovation belt

Professional services to the west; applied scenarios to the east

One shared talent, data, evidence and maintenance network.

SPATIAL JUDGEMENT

Zhongzhiyuan verifies, AI Origin co-creates, Dazhongsi brings AI into daily life.

DESIGN ACTIONS

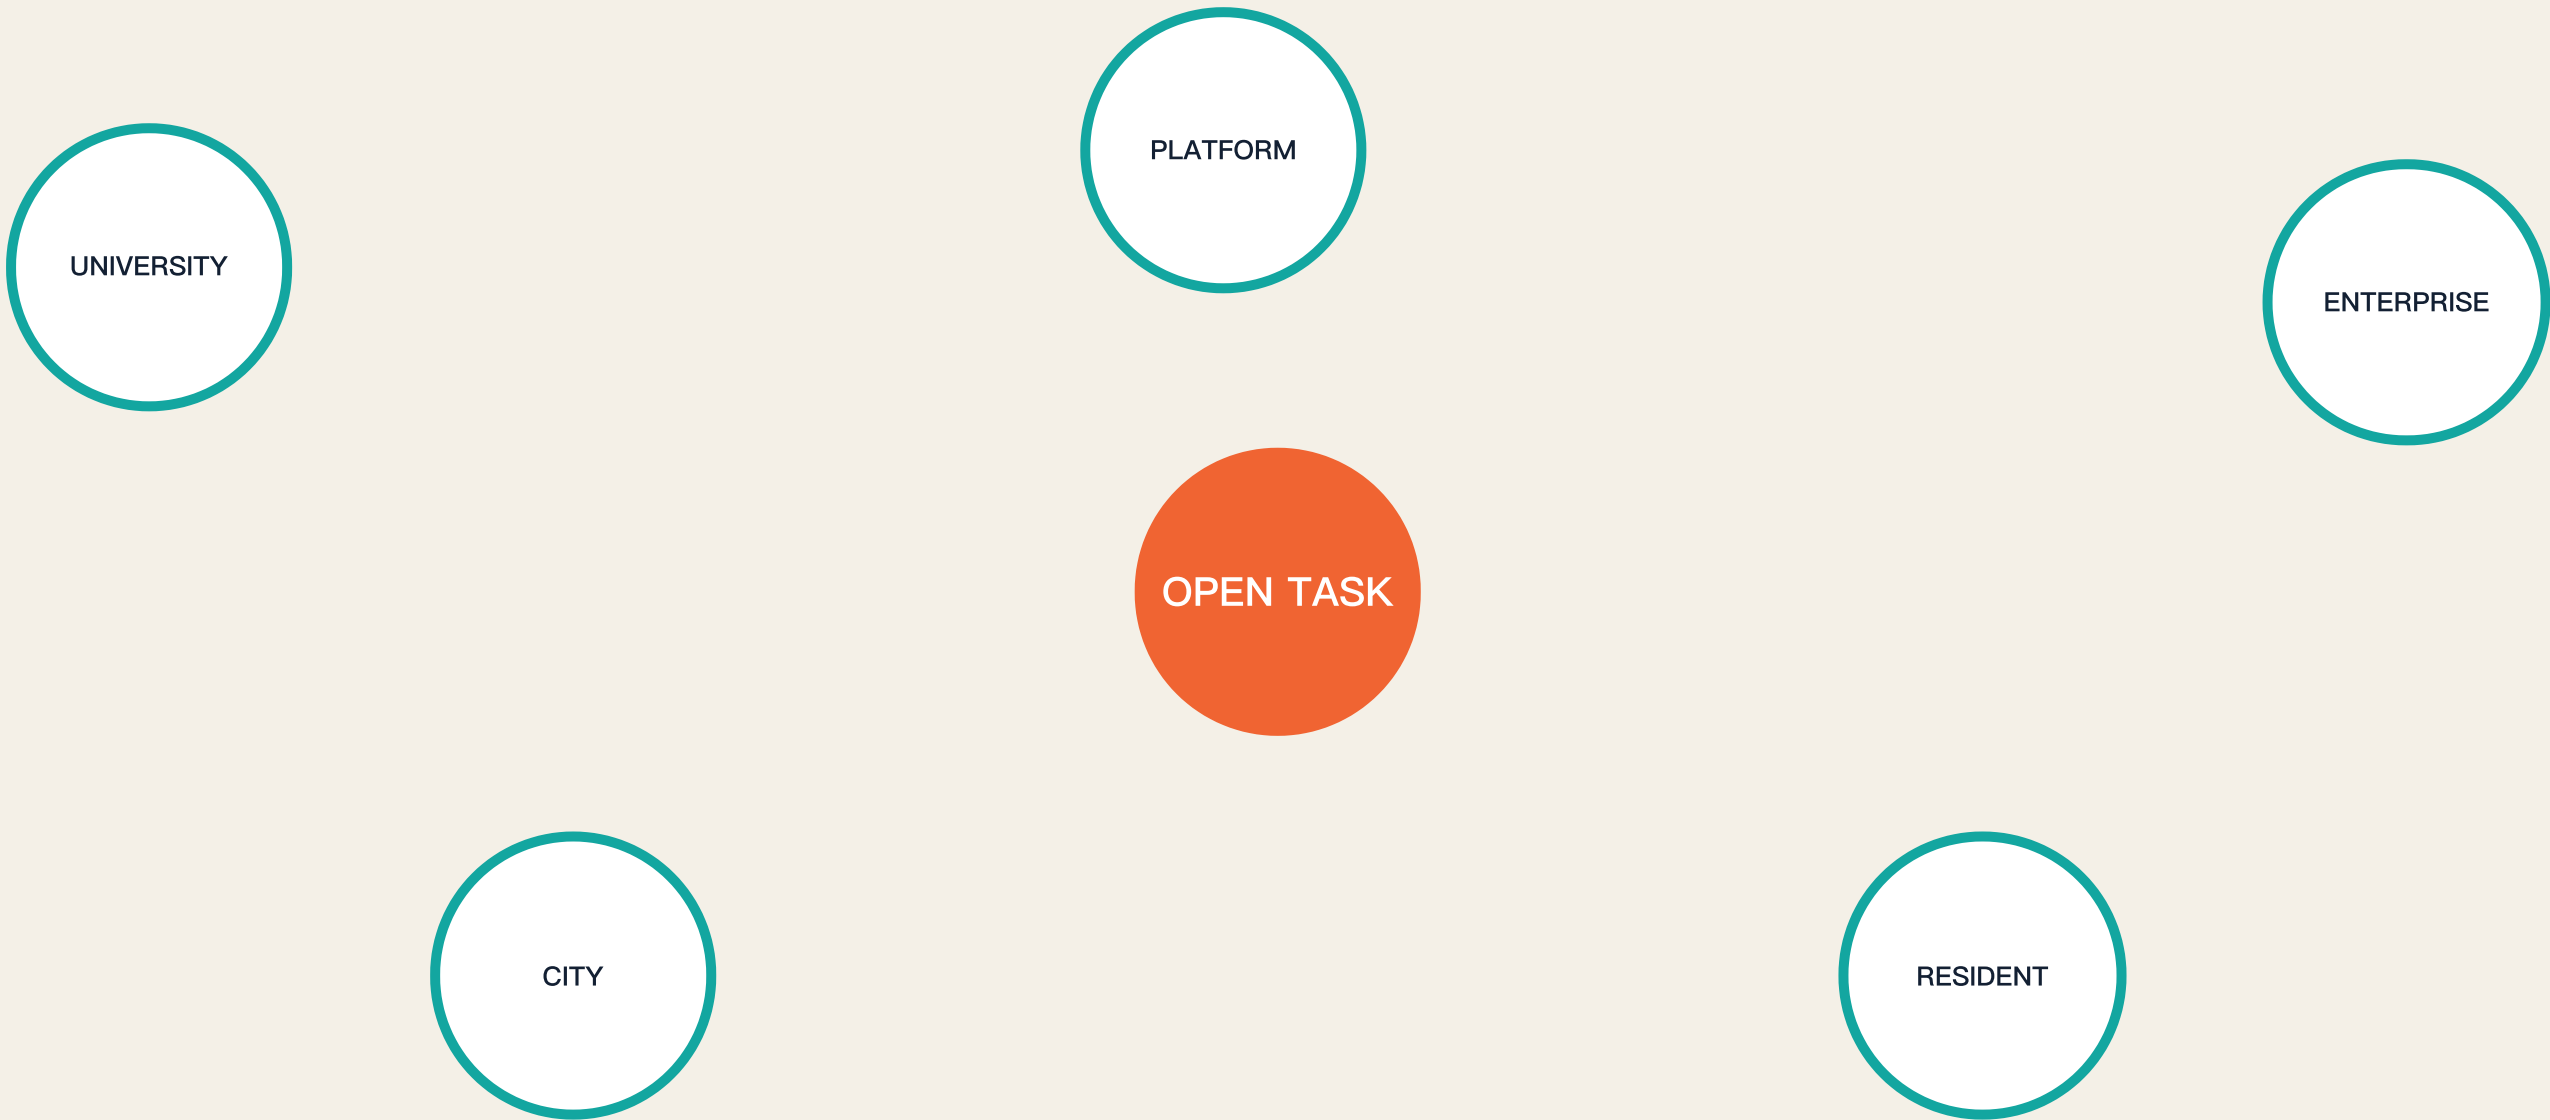

Zhongzhiyuan asks whether it can run safely; AI Origin whether it can be co-created; Dazhongsi whether it works in daily life. Two wings fill service gaps.

WHY THE NEXT PAGE

This decision creates the need for the next page: “Innovation network”.

Innovation network

Universities, platforms, companies, agencies and residents connect around tasks, not park borders.

SPATIAL JUDGEMENT

Universities, platforms, companies, agencies and residents connect around tasks, not park borders.

DESIGN ACTIONS

Universities, platforms, firms, agencies and residents assemble around open tasks. Resources follow problems rather than park boundaries.

WHY THE NEXT PAGE

This decision creates the need for the next page: “Five space prototypes”.

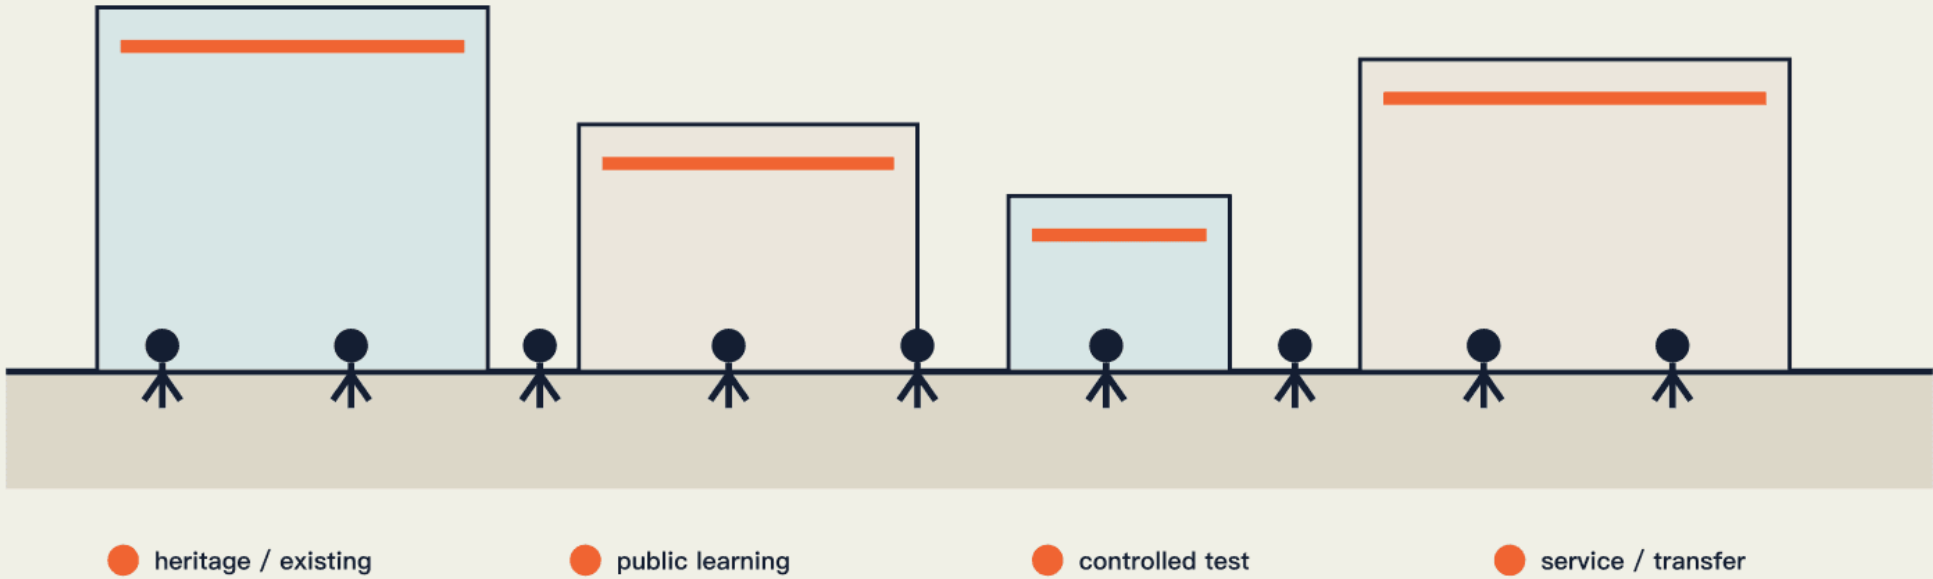

Five space prototypes

Lab, workshop, validation garden, pilot box and city interface combine as a kit of parts.

SECTION / PROTOTYPE

Verification garden section

People first · machines at walking speed · reversible components

Illustrative section: dimensions and engineering systems require professional design.

SPATIAL JUDGEMENT

Lab, workshop, validation garden, pilot box and city interface combine as a kit of parts.

DESIGN ACTIONS

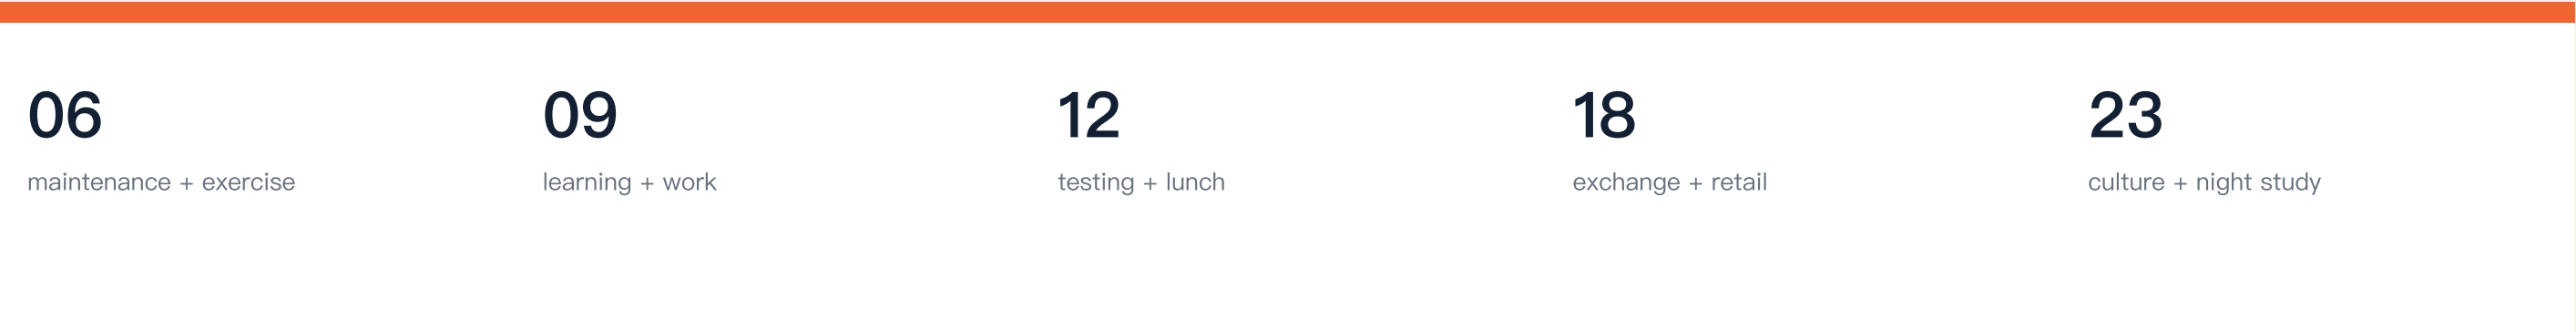

Five prototypes combine quiet research, open making, controlled testing, flexible pilots and public service. Ground-floor access determines real openness.

WHY THE NEXT PAGE

This decision creates the need for the next page: “24-hour talent chain”.

24-hour talent chain

Learning, work, testing, exchange, consumption and rest share space across the day.

SPATIAL JUDGEMENT

Learning, work, testing, exchange, consumption and rest share space across the day.

DESIGN ACTIONS

Morning maintenance, daytime learning, midday tests, evening exchange and night culture share one operating and safety framework.

WHY THE NEXT PAGE

Once the operating model is clear, the proposal enters the three key areas and draws them in detail.

Zhongzhiyuan plan

A validation garden links R&D, pilot production, export services and Xuezhiyuan station.

SPATIAL JUDGEMENT

A validation garden links R&D, pilot production, export services and Xuezhiyuan station.

DESIGN ACTIONS

A public entrance faces Xuezhiyuan station; R&D and pilots sit inside; a central garden hosts slow robots; export and display services line the edge.

WHY THE NEXT PAGE

This decision creates the need for the next page: “Industry structure”.

Industry structure

Full-stack R&D inside, public demonstration outside, controlled tests within explicit limits.

01 R&D CORE

02 PILOT EDGE

03 PUBLIC DEMO

04 METRO LINK

SPATIAL JUDGEMENT

Full-stack R&D inside, public demonstration outside, controlled tests within explicit limits.

DESIGN ACTIONS

The R&D core stays quiet; pilots meet logistics; display faces the park; metro links serve talent and visitors.

WHY THE NEXT PAGE

This decision creates the need for the next page: “Spatial section”.

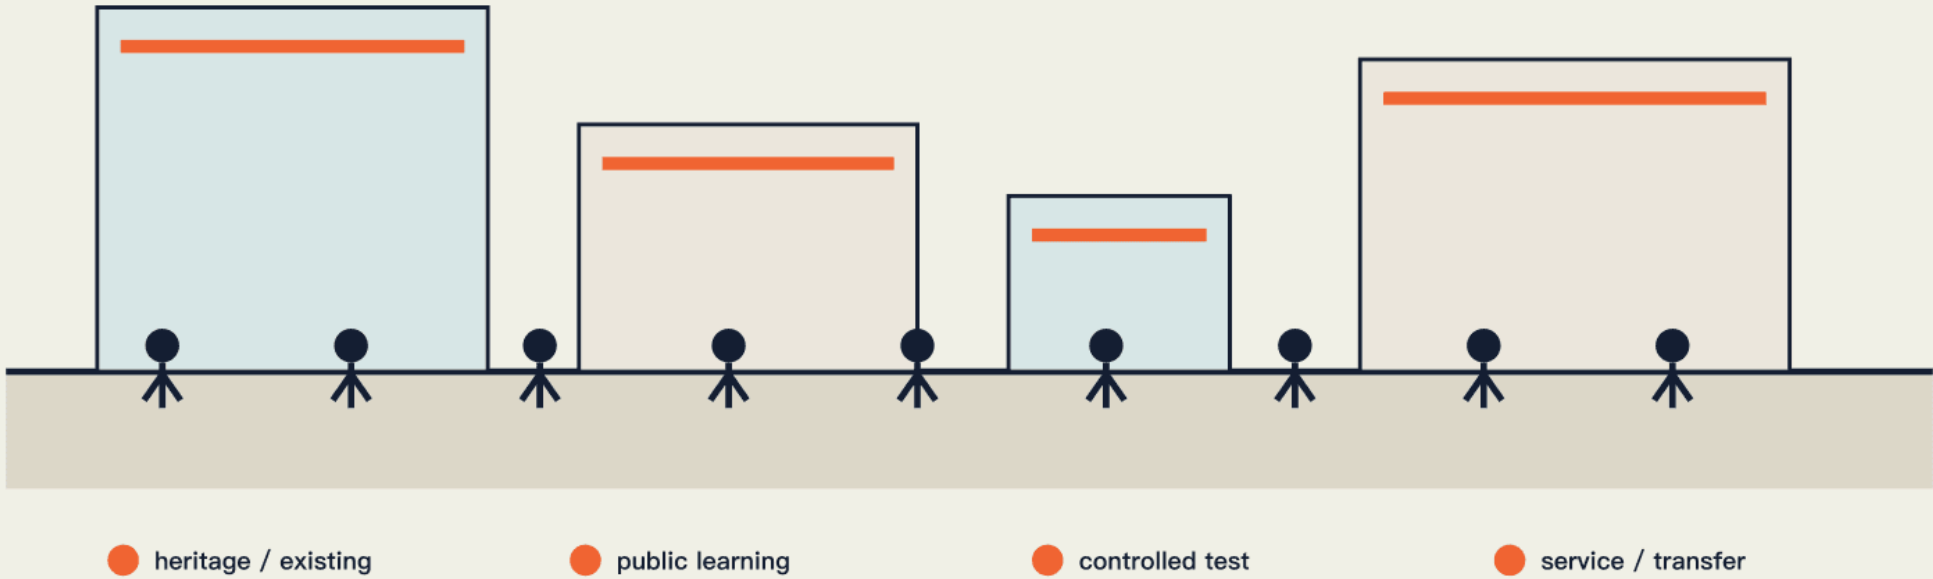

Spatial section

Machines move slowly; people have priority; observation and test zones remain connected but distinct.

SECTION / PROTOTYPE

Verification garden section

People first · machines at walking speed · reversible components

Illustrative section: dimensions and engineering systems require professional design.

SPATIAL JUDGEMENT

Machines move slowly; people have priority; observation and test zones remain connected but distinct.

DESIGN ACTIONS

The section separates walking, observation, stoppable test loops and production. Machines are speed-limited and people control crossings.

WHY THE NEXT PAGE

This decision creates the need for the next page: “Controlled tests”.

Controlled tests

Robots and delivery systems begin in a stoppable and recoverable validation garden.

EXISTING

SPATIAL JUDGEMENT

Robots and delivery systems begin in a stoppable and recoverable validation garden.

DESIGN ACTIONS

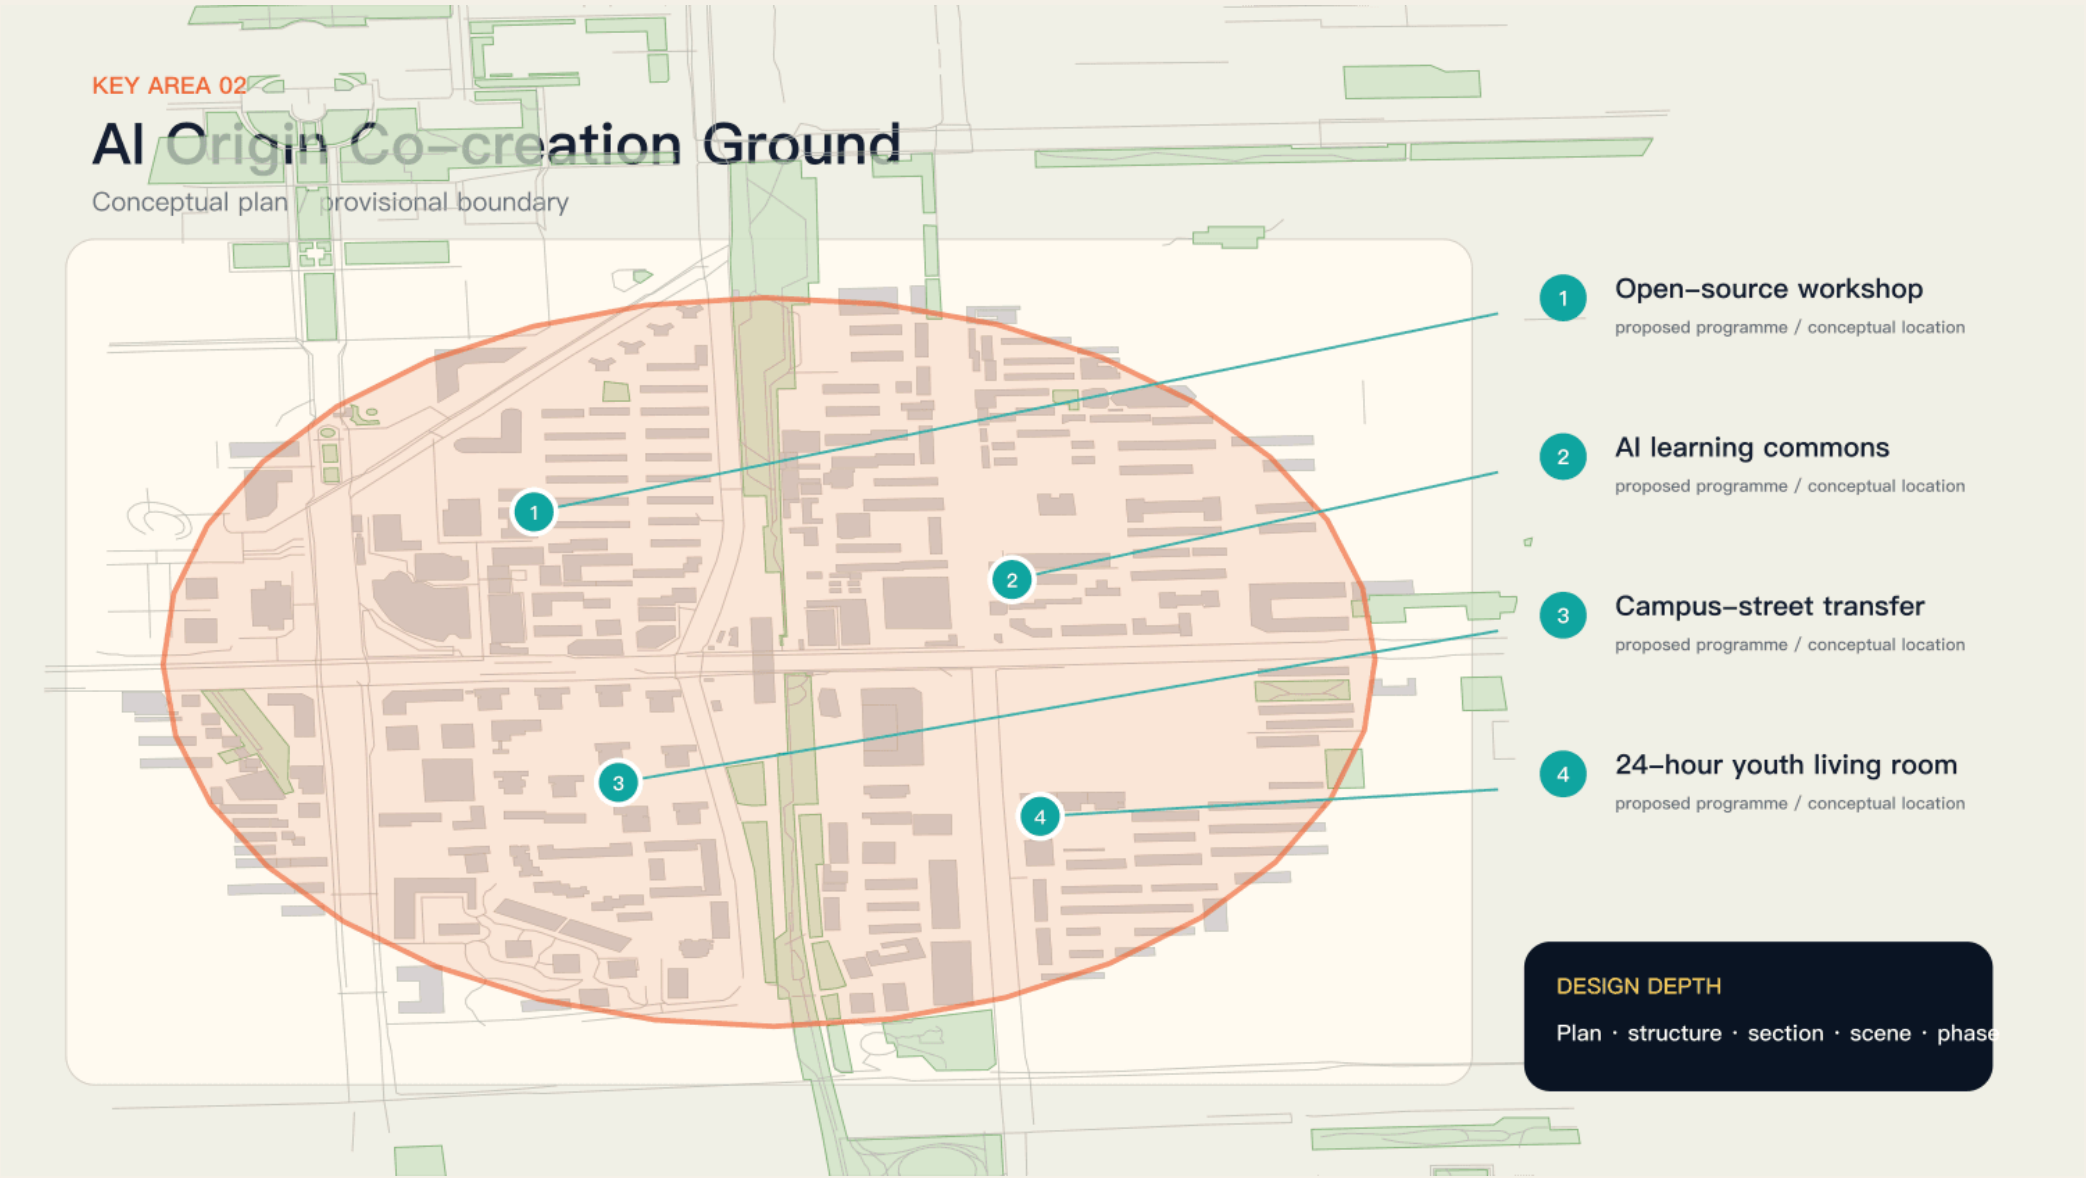

Tests start in fixed times and areas with public status, incident logs and stop controls, then expand to delivery hand-offs only after evidence.

WHY THE NEXT PAGE

The verification ground is complete; the next section moves from testing to university-led co-creation.

AI Origin plan

University transfer, open source, AI education and youth life form a one-kilometre learning circle.

SPATIAL JUDGEMENT

University transfer, open source, AI education and youth life form a one-kilometre learning circle.

DESIGN ACTIONS

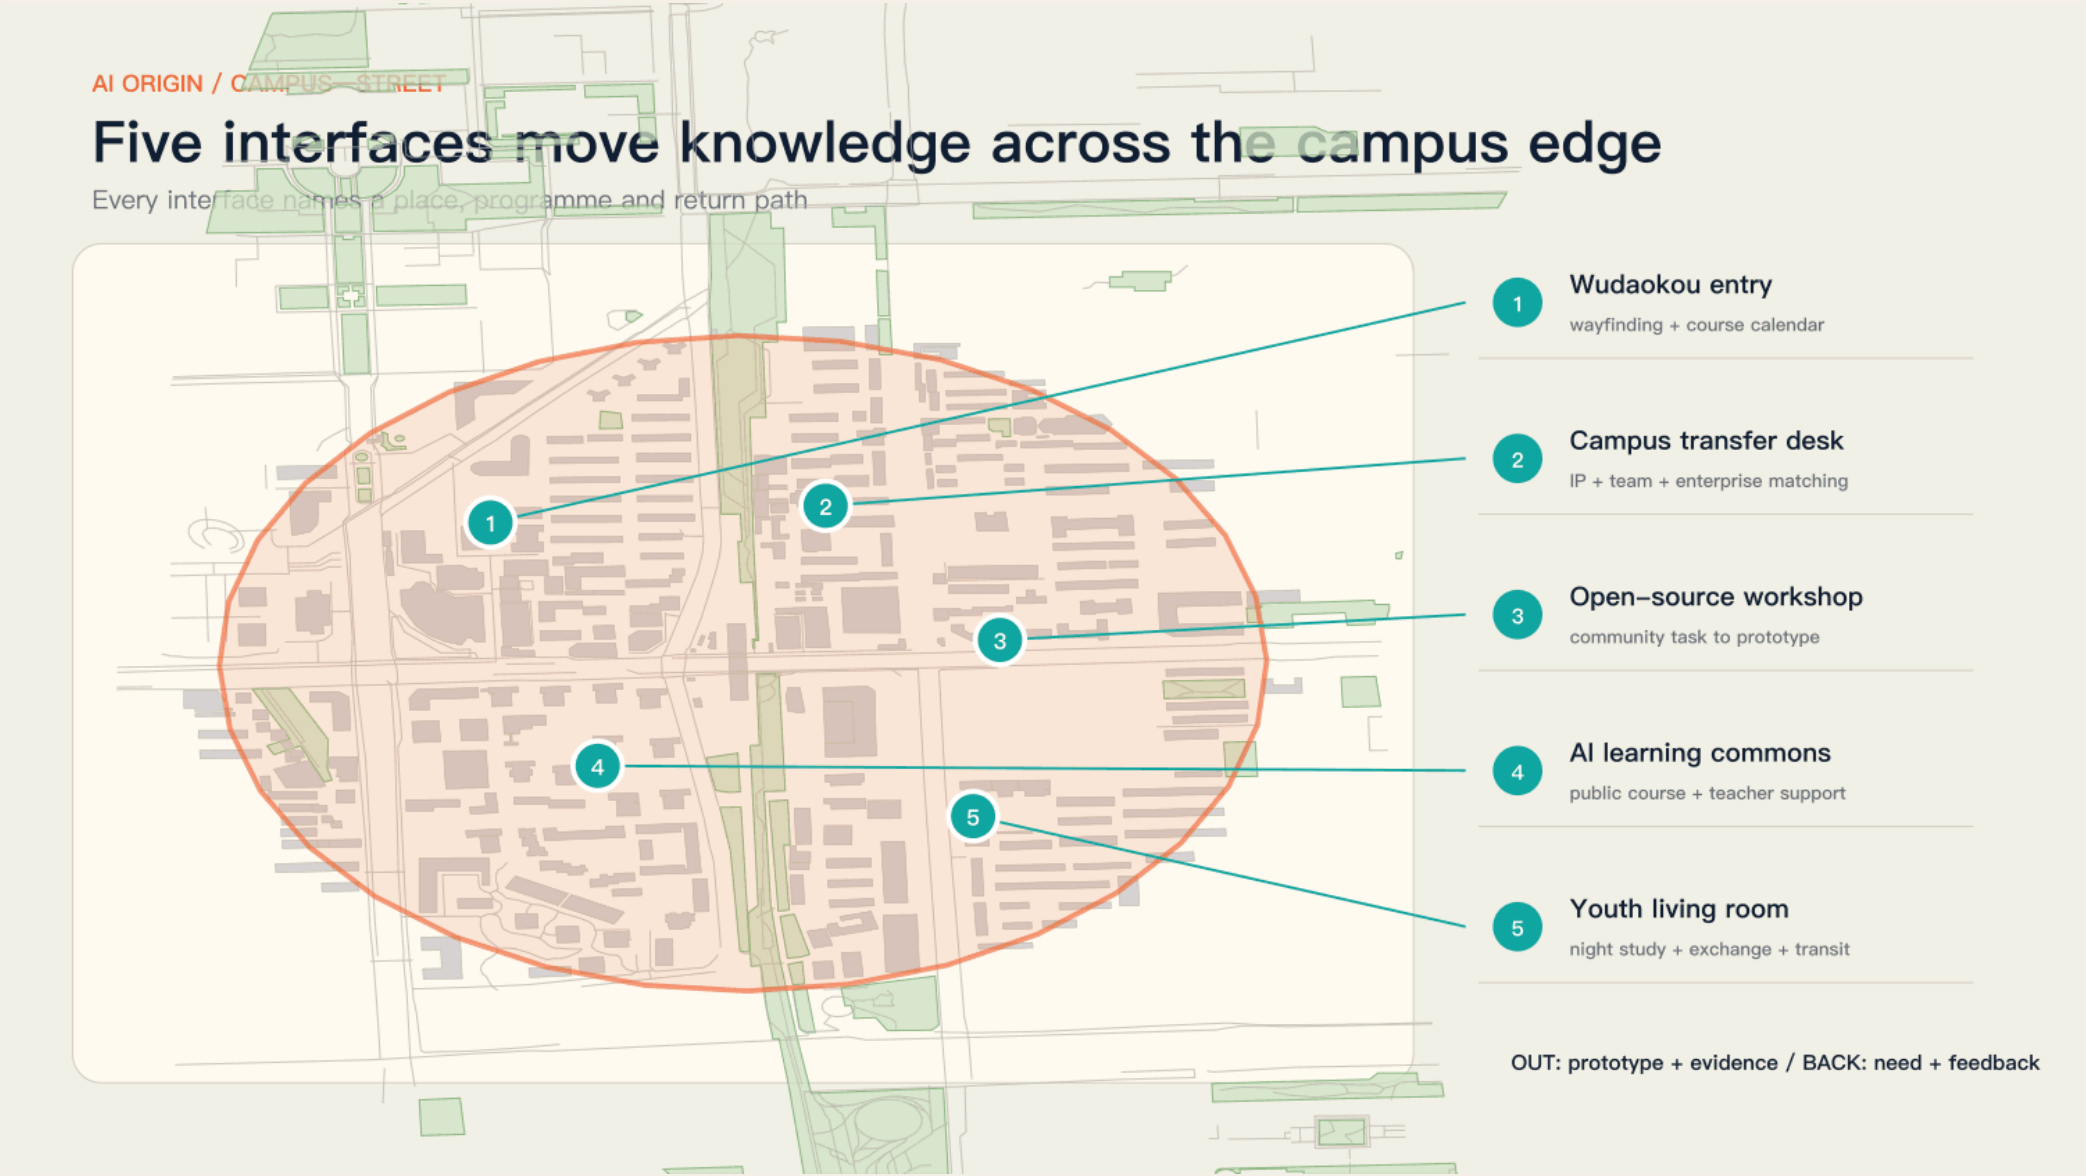

Wudaokou and campus edges become entries to a one-kilometre learning circle of transfer services, workshops, AI learning and youth life.

WHY THE NEXT PAGE

This decision creates the need for the next page: “Campus-street network”.

Campus–street network

Wudaokou translates campus capability into public courses and workshops.

SPATIAL JUDGEMENT

Wudaokou translates campus capability into public courses and workshops.

DESIGN ACTIONS

Courses, question calls and workshops move research into the street; needs and feedback return to research teams.

WHY THE NEXT PAGE

This decision creates the need for the next page: “Open workshop + AI education”.

Open workshop + AI education

Real problems enter the workshop; prototypes and evidence return to the community.

SPATIAL JUDGEMENT

Real problems enter the workshop; prototypes and evidence return to the community.

DESIGN ACTIONS

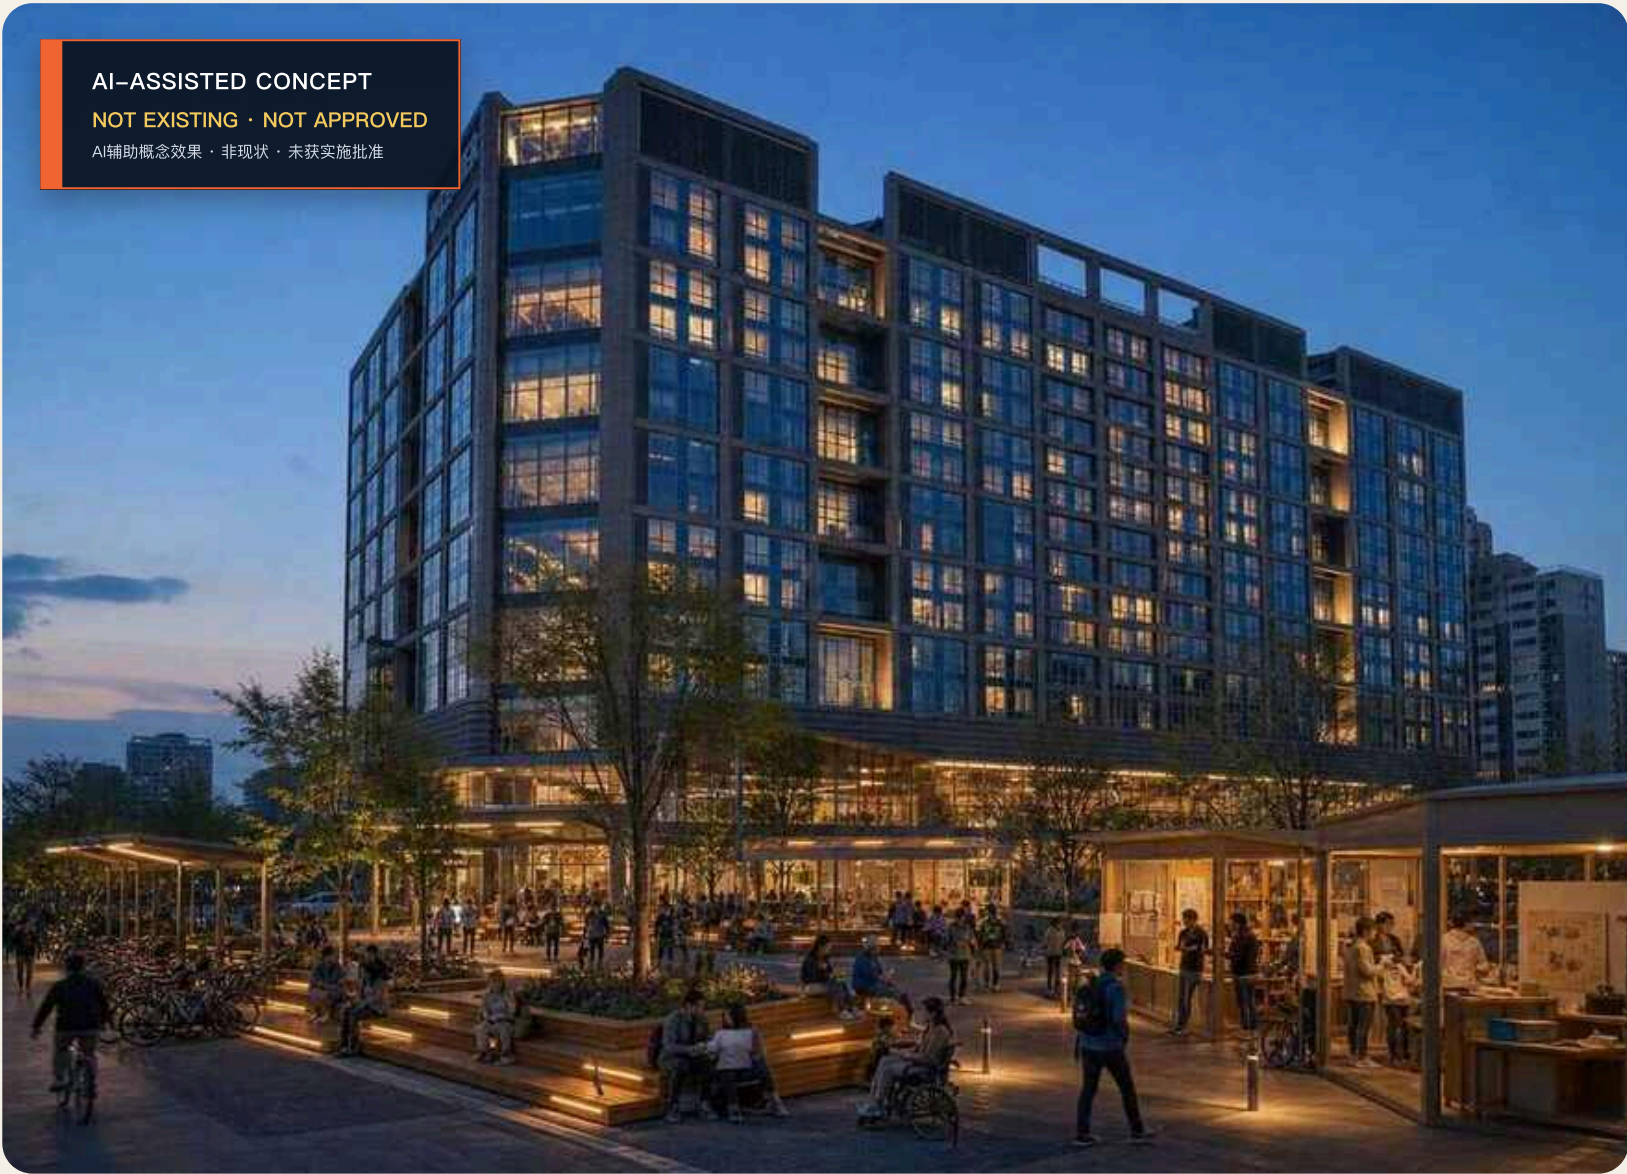

Workshops accept real community problems and return demonstrable prototypes, instructions and evidence. Learning and production share one place.

WHY THE NEXT PAGE

This decision creates the need for the next page: “Youth living room”.

Youth living room

Twenty-four-hour innovation moves out of offices into public places for staying and exchange.

SPATIAL JUDGEMENT

Twenty-four-hour innovation moves out of offices into public places for staying and exchange.

DESIGN ACTIONS

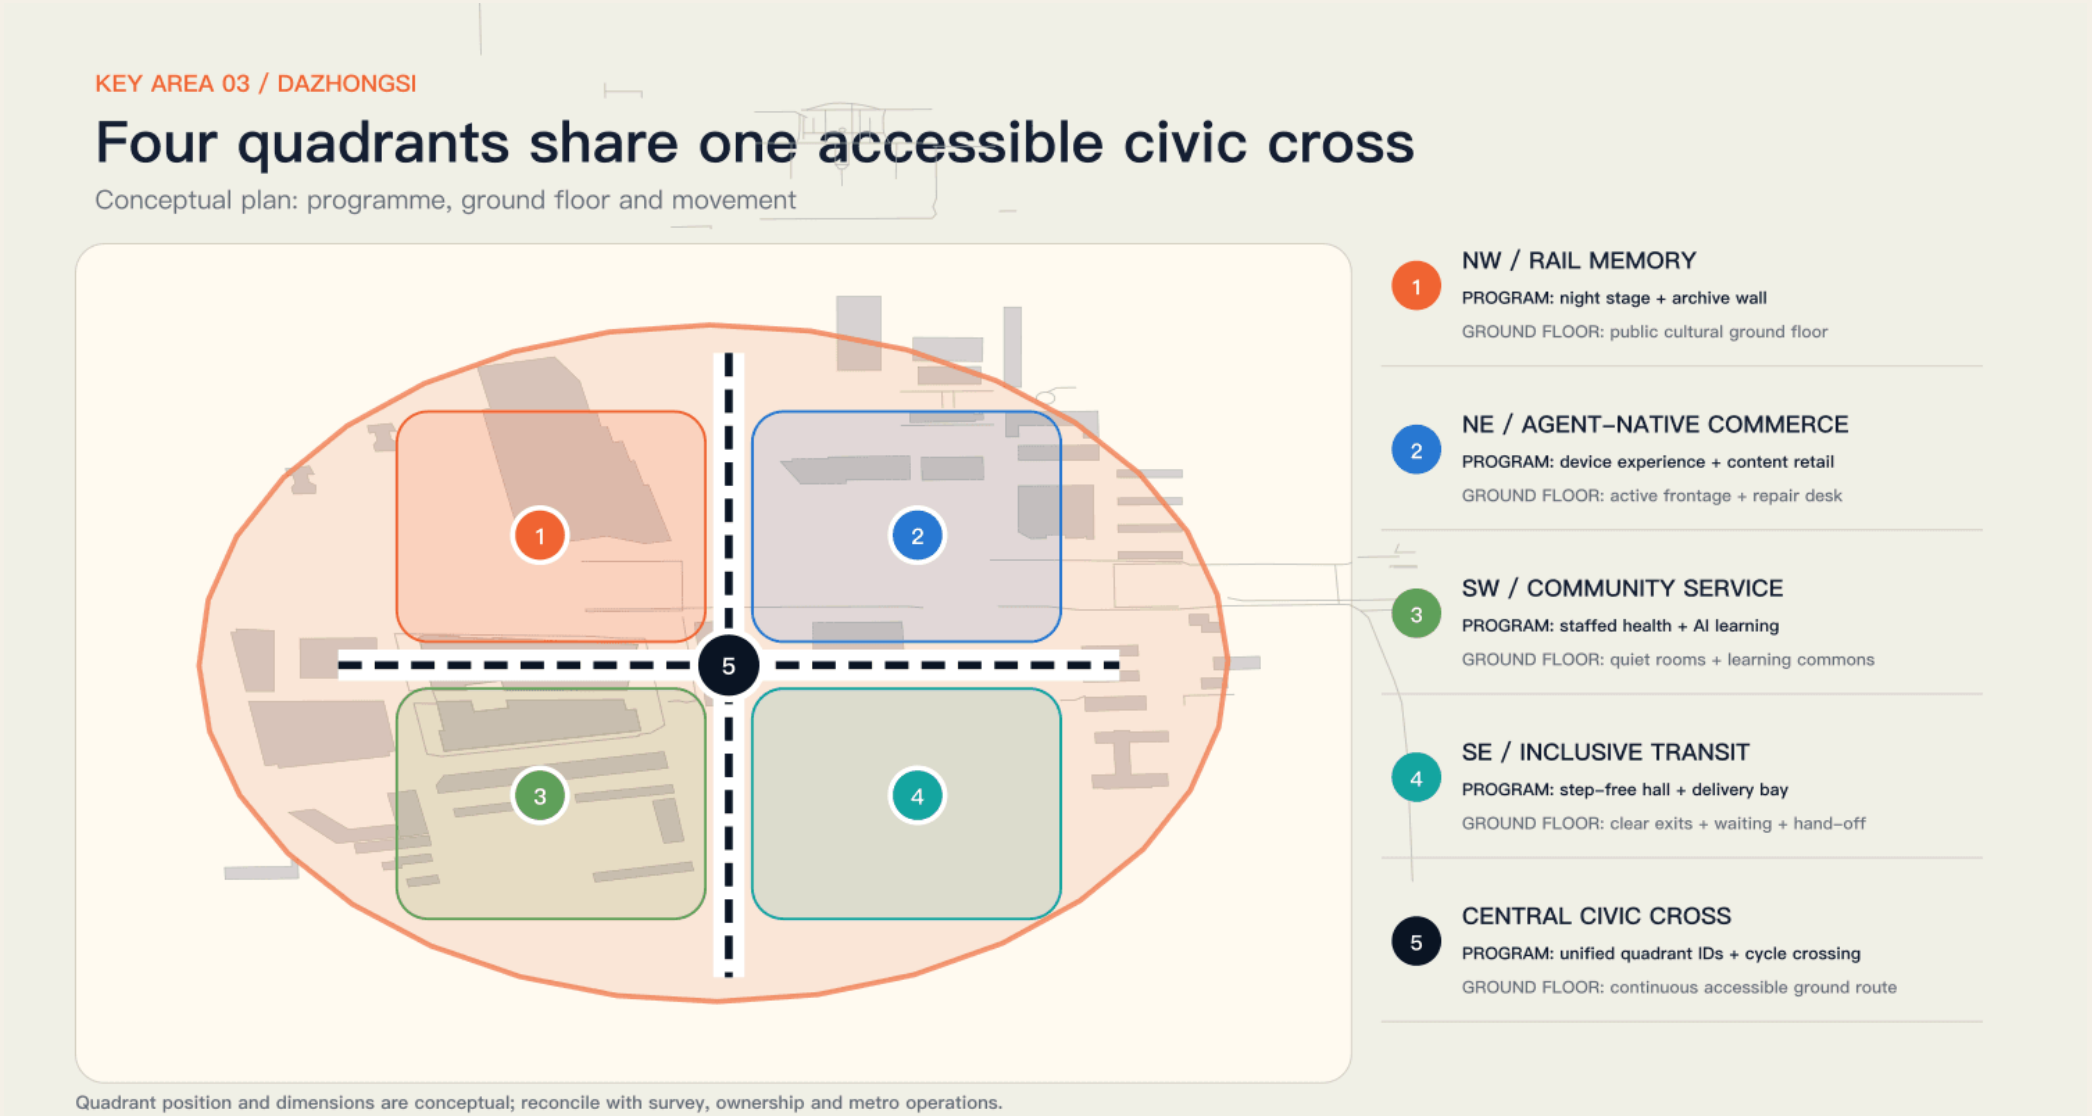

Open ground floors combine study tables, pitches, food and night transport information, enabling people to stay rather than only commute.

WHY THE NEXT PAGE

Co-creation now has a spatial home; the next section brings AI into daily consumption and culture.

Dazhongsi plan

Four quadrants work together as an AI living open ground.

SPATIAL JUDGEMENT

Four quadrants work together as an AI living open ground.

DESIGN ACTIONS

One accessible civic cross connects four quadrants: rail memory, night stage and archive wall in the northwest; device experience, content retail and repair in the northeast; staffed health and AI learning in the southwest; step-free interchange, waiting and delivery hand-off in the southeast.

WHY THE NEXT PAGE

This decision creates the need for the next page: “Four-quadrant stitch”.

Four-quadrant stitch

Unified ground guidance, accessible continuity and cycle crossings repair legibility first.

SPATIAL JUDGEMENT

Unified ground guidance, accessible continuity and cycle crossings repair legibility first.

DESIGN ACTIONS

Number quadrants and exits, add continuous ramps, cycle waiting and lighting, and name the public destinations in every direction.

WHY THE NEXT PAGE

This decision creates the need for the next page: “Agent-native commerce”.

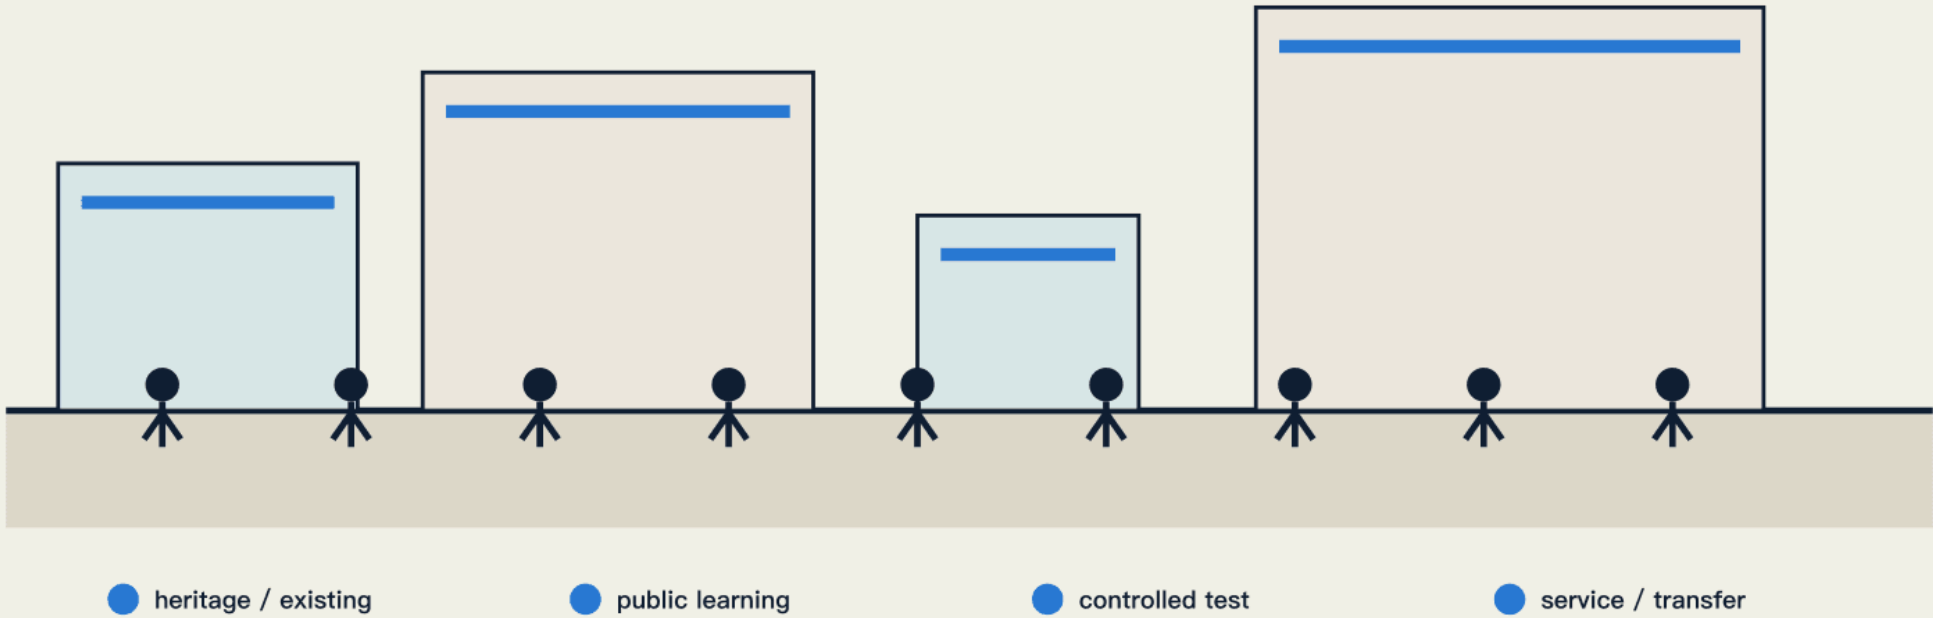

Agent-native commerce

Devices, content, community services and metro interchange share active ground floors.

SECTION / PROTOTYPE

Four-quadrant living section

People first · machines at walking speed · reversible components

Illustrative section: dimensions and engineering systems require professional design.

SPATIAL JUDGEMENT

Devices, content, community services and metro interchange share active ground floors.

DESIGN ACTIONS

The transit hall manages interchange; active ground floors show devices and content; upper levels hold community creation; back-of-house supports delivery and maintenance.

WHY THE NEXT PAGE

This decision creates the need for the next page: “Culture + night co-stage”.

Culture + night co-stage

Night economy and railway memory coexist without turning heritage into a technology prop.

AI-ASSISTED CONCEPT
NOT EXISTING · NOT APPROVED
AI辅助概念效果 · 非现状 · 未获实施批准

SPATIAL JUDGEMENT

Night economy and railway memory coexist without turning heritage into a technology prop.

DESIGN ACTIONS

Rail memory enters night programmes through sound, image and storytelling. Commercial activity reserves time and space for rest, access and community content.

WHY THE NEXT PAGE

Three districts are resolved; the final chapter connects them through daily scenarios and delivery.

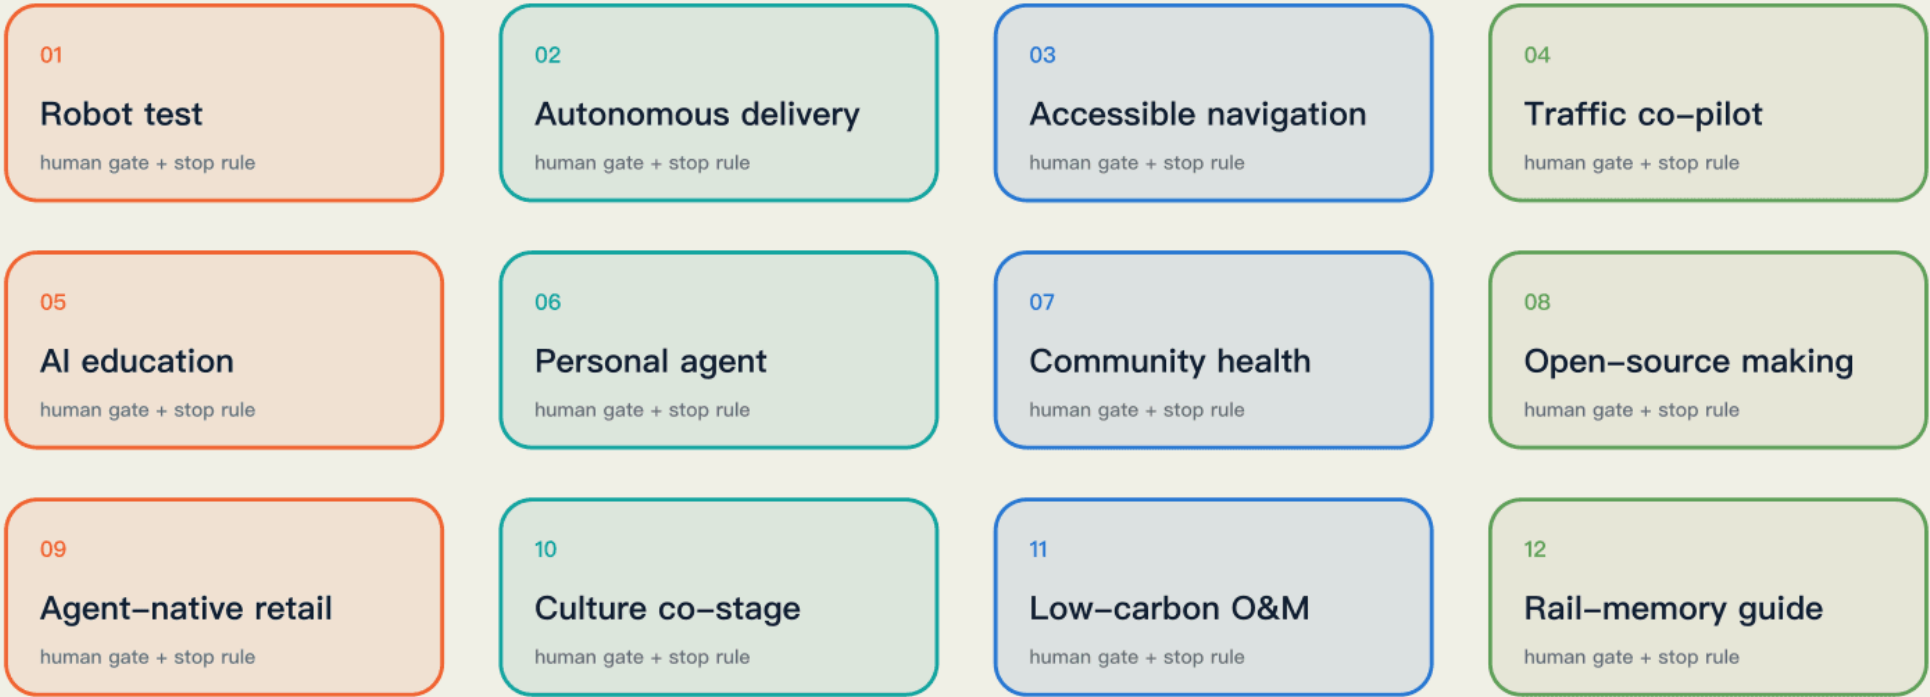

Twelve–scenario matrix

Mobility, health, education, robots, culture and operations share one accountability system.

07 / AI CITY LIFE

Twelve visible scenarios, one accountable operating system

The public experiences services; agents coordinate evidence, consent and stopping

SPATIAL JUDGEMENT

Mobility, health, education, robots, culture and operations share one accountability system.

DESIGN ACTIONS

Twelve front–stage experiences are distributed across three grounds but share rights, evidence, safety and archive systems. Each names users, place and stop rule.

WHY THE NEXT PAGE

This decision creates the need for the next page: “Mobility + robots”.

Mobility + robots

Low-speed, visible and stoppable rules come before scaling.

SPATIAL JUDGEMENT

Low-speed, visible and stoppable rules come before scaling.

DESIGN ACTIONS

Robots, autonomous shuttles and delivery start on slow, visible and supervised routes. Kerb hand-offs keep machines out of continuous walking space.

WHY THE NEXT PAGE

This decision creates the need for the next page: “Health, learning + inclusion”.

Health, learning + inclusion

Technology first improves daily access for older people, children, disabled people and carers.

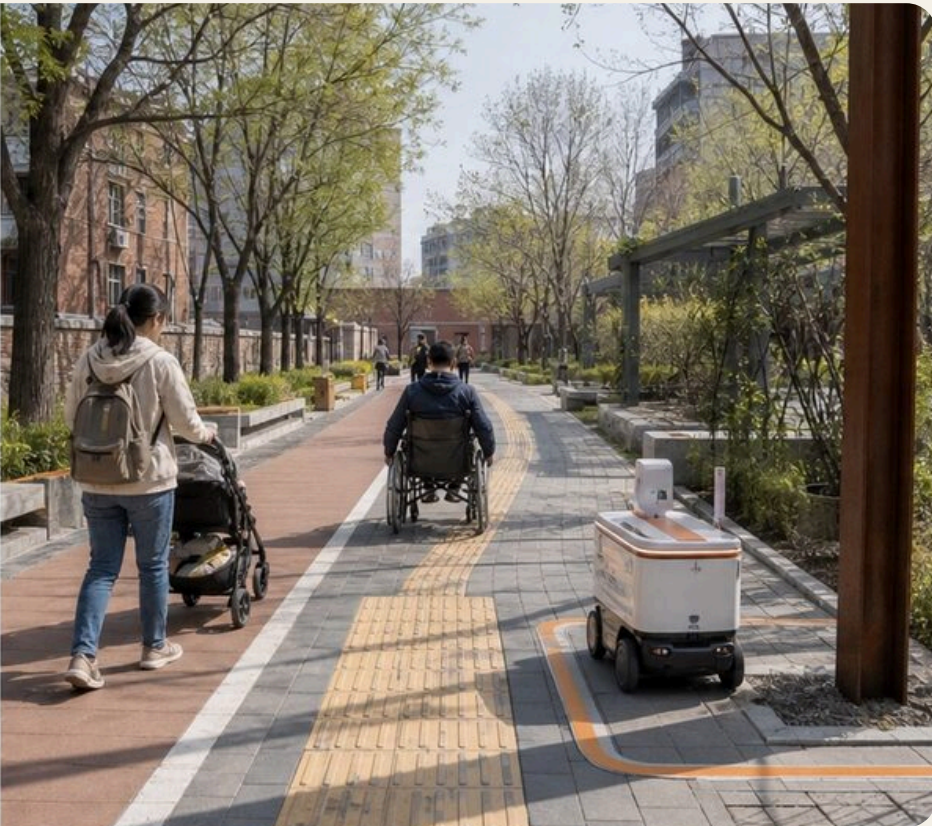

COMMUNITY HEALTH

Users: older person + carer
Place: staffed neighbourhood health point
Human gate: nurse confirms; no automated diagnosis

AI LEARNING

Users: children + teacher + wheelchair user
Place: Qinghuayuan station learning commons
Human gate: teacher decides; no automated ranking

ACCESSIBLE NAVIGATION

Users: wheelchair + pram + delivery hand-off
Place: greenway kerb and tactile route
Stop rule: human override; robot stops on conflict

SPATIAL JUDGEMENT

Technology first improves daily access for older people, children, disabled people and carers.

DESIGN ACTIONS

Each service names user, place and human gate: community health serves older people and carers at a staffed desk, with nurse confirmation and no automated diagnosis; AI learning serves children, teachers and wheelchair users in the station commons, with teacher decisions and no automated ranking; accessible navigation serves wheelchairs, prams and delivery hand-offs, stopping on conflict with human override.

WHY THE NEXT PAGE

This decision creates the need for the next page: “Rail culture + kit of parts”.

Rail culture + kit of parts

Wayfinding, question desks, displays, seating and micro–utility rooms use maintainable modules.

RAIL CULTURE + KIT OF PARTS

A recognisable family of small, maintainable interfaces

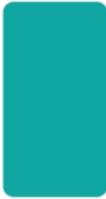

No heritage decoration; each component carries a real urban function

01

WAYFINDING

reversible · repairable

02

QUESTION DESK

reversible · repairable

03

DISPLAY RAIL

reversible · repairable

04

REST + SHADE

reversible · repairable

05

MICRO UTILITY

reversible · repairable

06

HONOUR WALL

reversible · repairable

SPATIAL JUDGEMENT

Wayfinding, question desks, displays, seating and micro–utility rooms use maintainable modules.

DESIGN ACTIONS

Wayfinding, question desks, display rails, shade, micro–utilities and honour walls share a material system and can be replaced one unit at a time.

WHY THE NEXT PAGE

This decision creates the need for the next page: “Agent operating system”.

Agent operating system

Six agents coordinate; consent, professional decision, public review and stop/restore remain human gates.

08 / OPERATING SYSTEM

Six agents coordinate; four human gates decide

Governance is compressed into one page and supports every spatial scenario

SPATIAL JUDGEMENT

Six agents coordinate; consent, professional decision, public review and stop/restore remain human gates.

DESIGN ACTIONS

Six agents organise questions, evidence, matching, safety, rights and archives. Consent, expert judgement, public review and stop/restore remain human decisions.

WHY THE NEXT PAGE

This decision creates the need for the next page: “90 days—1 year—3 years”.

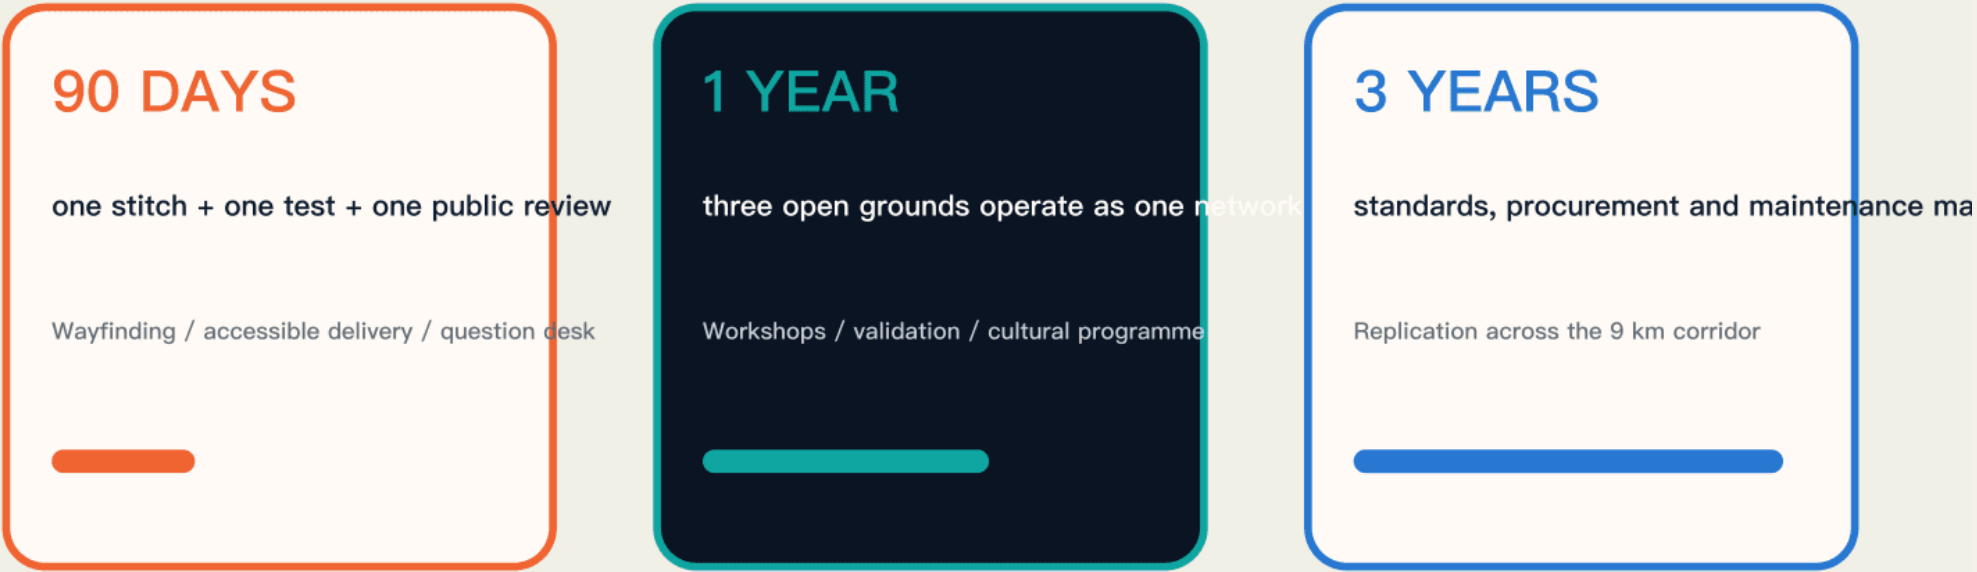

90 days—1 year—3 years

Start with one stitch and one test, then connect three grounds and replicate along nine kilometres.

09 / DELIVERY

Prove a small loop, then scale the network

90 days → 1 year → 3 years

Advance only when evidence, maintenance ownership and stopping conditions are explicit.

SPATIAL JUDGEMENT

Start with one stitch and one test, then connect three grounds and replicate along nine kilometres.

DESIGN ACTIONS

In 90 days build one reversible stitch and test; in one year connect three grounds; in three years replicate only components supported by evidence.

WHY THE NEXT PAGE

This decision creates the need for the next page: “Metrics, evidence + risk”.

Metrics, evidence + risk

Every number returns to geometry; every concept has a status; risk is managed in one place.

10 / METRICS + EVIDENCE

One number, one geometry, one status

Official facts · open data · field observation · conceptual model · professional follow-up

13.333

km² provisional study model

recomputed from GeoJSON

8.82%

mapped green ratio

recomputed from GeoJSON

0.063%

candidate public-space ratio

recomputed from GeoJSON

117.0

km mapped walk/cycle network

recomputed from GeoJSON

OFFICIAL FACT

OPEN DATA

FIELD OBSERVATION

CONCEPT DESIGN

TO BE VERIFIED

Brief task area ≈11.4 km²; this concept geometry is separate.

SPATIAL JUDGEMENT

Every number returns to geometry; every concept has a status; risk is managed in one place.

DESIGN ACTIONS

Areas and ratios are recomputed from geometry; facts, observations, open data, design and unknowns remain distinct; risk is concentrated without obscuring design.

WHY THE NEXT PAGE

With metrics and risks made explicit, the final page returns to the complete future city image.

AI-ASSISTED CONCEPT
NOT EXISTING · NOT APPROVED
AI辅助概念效果 · 非现状 · 未获实施批准

THE RAILWAY OPENS A PATH. THE CITY KEEPS LEARNING.

Nine kilometres help the city keep learning—and let everyone see how they can participate in its future.

The spine connects space; three grounds connect industry to life; the operating system keeps every test accountable.

Wang Haoran (王浩冉) · 2026
