

Jing-Zhang Symbiotic StarBridge

Centennial Jing-Zhang AI Innovation Belt Urban Design Proposal

Overview: From Jing-Zhang Railway to Starway

In 1909, the Jing-Zhang Railway opened - the first railway independently designed and built by Chinese engineers. In 2026, along the same corridor, we propose 'Symbiotic StarBridge' - a five-dimensional urban design proposal integrating human-centered design, interplanetary civilization dialogue, AI self-evolution, AI transportation, and AI services. With the Jing-Zhang Heritage Park as the main artery, three key areas (Zhongzhi Evolution Park / Origin Symbiosis Hub / StarBridge Dialogue Port) as anchors, and the double-helix as spatial DNA, this 11.4 km2 design area is shaped into a human-AI symbiotic city paradigm and Earth's first physical interface for interstellar civilization dialogue.

Five Design Dimensions

HUMAN-CENTERED: AI's ultimate metric is human dignity & well-being | 15-min AI service circles, accessibility, privacy-first

INTERPLANETARY DIALOGUE: Earth's first interstellar communication interface | SETI nodes, public observatory, dialogue forum

AI SELF-EVOLUTION: The city as a living AI system | Zhongzhi Evolution Park, spatial sensing -> learning -> adaptation

AI TRANSPORTATION: Four-tier mobility (L0-L3) | AI dynamic right-of-way, pedestrians always highest priority

AI SERVICES: AI Concierge system | Non-intrusive, always overridable, physical 'disable AI' button

Three Key Areas

Zhongzhi Evolution Park (1.92 km2) - World's first AI self-evolution accelerator. Full-stack test corridor, safety governance sandbox, low-carbon computing garden.

Origin Symbiosis Hub (1.04 km2) - Human-AI co-living demonstration district. Open-source launch hall, achievement translation street, symbiotic living zone.

StarBridge Dialogue Port (0.72 km2) - Interplanetary communication interface. SETI sculpture park, public radio observatory, StarBridge Antenna Spire.

Three AI Pilgrimage Landmarks

StarBridge Antenna Spire - Climbable public radio sculpture. Observation deck by day, SETI data visualization light column by night.

Double Helix Walk - DNA double-helix pedestrian bridge. Left helix: AI history. Right helix: Haidian innovation figures.

Herringbone Memory Plaza - 1:1 ground projection of Zhan Tianyou's track pattern. 'Track to the Future' pointing toward Polaris.

Implementation Phasing

Phase	Timeline	Core Actions	Dependencies
StarBridge: Launch	1-2 years	Mobility gap stitching, 3 AI service circle pilots, Interstellar Boardroom	Local government approval, public space permits
StarBridge: Weave	3-5 years	Three-area design deepening, four-tier mobility phase 1, 9 service hubs	Regulatory/planning coordination
StarBridge: Resonance	5-10 years	Dialogue Forum permanent venue, AI self-evolution system launch	Additional funding, international partners

DISCLAIMER: All content constitutes open, co-creative conceptual suggestions. Does not substitute for formal planning or constitute government approval conclusions. All spatial indicators based on provisional boundaries. Five statutory planning control indicators are missing. Recalculation required upon official data release.
