Jing-Zhang Symbiotic StarBridge - Urban Design Proposal

From Jing-Zhang Railway to Starway - Every Step Toward the Cosmos Through AI

Contributor: lin2798003-creator | AI Model: DeepSeek V4 Pro | Aug 2026
package_type: professional_design_package | state: ready_for_review

1. Five Design Dimensions

Human-Centered: AI's ultimate metric is human dignity, freedom and well-being. 15-min AI service circles, full accessibility, privacy-first urban sensing.

Interplanetary Civilization Dialogue: Earth's first physical interface zone for interstellar communication. SETI data nodes, public radio observatory terrace, interstellar information sculpture park, Cross-Civilization Dialogue Forum.

AI Self-Evolution: The city is a living, learning AI system. Zhongzhi Evolution Park is the world's first AI self-evolution accelerator.

AI Transportation: Four-tier mobility system (L0-L3) + AI dynamic right-of-way allocation. Pedestrians always have the highest priority.

AI Services: AI Concierge system - ubiquitous, non-intrusive, always human-overridable, with a physical 'Disable AI' button always present.

2. Three Key Areas

Zhongzhi Evolution Park (1.92 km2)

World's first AI self-evolution accelerator. Full-stack test corridor, safety governance sandbox, low-carbon computing garden, international AI standards mutual recognition center.

Origin Symbiosis Hub (1.04 km2)

Human-AI co-living demonstration district. 24h open-source launch hall, campus-proximate achievement translation street, symbiotic living experimental zone, 15-min AI service circle pilot.

StarBridge Dialogue Port (0.72 km2)

Physical-digital hybrid interface for interplanetary communication. SETI sculpture park, public radio observatory terrace, Cross-Civilization Dialogue Forum permanent venue, StarBridge Antenna Spire.

3. Ten AI Scenario Cards

- SC-01 AI Mobility Navigation & Right-of-Way Allocation - Dynamic allocation, pedestrians first
- SC-02 AI Health Guardian Station - Vital signs + telemedicine + emergency, physician-reviewed
- SC-03 AI Education Companion Pod - Personalized learning + multilingual + intergenerational literacy
- SC-04 Robot Delivery Terminal Network - Underground logistics + surface lockers + drones
- SC-05 Urban AI Agent Governance Sandbox - Public data -> simulation -> feedback -> review
- SC-06 Interstellar Dialogue Public Experience - SETI data visualization + radio signal interpretation
- SC-07 AI Legal Service Terminal - Legal search + contract templates + lawyer-reviewed
- SC-08 Accessible AI Mobility Assistance - Real-time navigation for visually/hearing/mobility-impaired
- SC-09 Open-Source Community Collaboration Loop - Cross-timezone + contribution visualization
- SC-10 Global AI Week - Route planning + crowd prediction + multilingual dissemination

4. Core Metrics

Metric	Value	Status
Overall Design Area	11,400,000 m2	provisional
Coordinated Research Area	43,600,000 m2	provisional
Key Area Count	3	known
AI Service Circles	9	conceptual
AI Scenarios	10	conceptual
Landmarks	3	conceptual
User Personas	5	conceptual
Global Case Studies	8	known
Implementation Phases	3	conceptual

DISCLAIMER: All spatial metrics based on provisional boundaries. Five statutory planning control indicators are missing. Recalibration required upon official data release. This proposal is a conceptual suggestion, not a substitute for formal planning.
