

Regional structure

Conceptual delivery; no approval, partnership or deployment is implied.

CELL • JZ regional structure

Conceptual diagram; provisional geometry; no statutory boundary or partner commitment.

Input: public capability card → aggregate indicator → human review → small test → exit/hand-off

Three node prototypes

Conceptual delivery; no approval, partnership or deployment is implied.

Three node prototypes

Each node has a distinct spatial mechanism, journey, operator and exit gate.

Cell Neighborhood

Mixed cell courtyard

Journey: arrive → choose → co-use → return
User: resident / student
Public value: visible everyday access
Operator: community operator
Safety gate: no consent = no capture
Exit: revert to paper/empty module

Smart Weave Platform

heritage public interface

Journey: read → ask → walk → reflect
User: visitor / elder
Public value: visible everyday access
Operator: park + human guide
Safety gate: aggregate only
Exit: revert to paper/empty module

Growth Courtyard

reversible module yard

Journey: book → test → show → disassemble
User: maker / enterprise
Public value: visible everyday access
Operator: yard steward
Safety gate: fire/accessibility gate
Exit: revert to paper/empty module

Provisional concept; no approved redline, construction, procurement or partnership is implied.

East-west seam

Conceptual delivery; no approval, partnership or deployment is implied.

East-west seam result

Three-node / component mapping is explicit; all actions remain conceptual.

Spatial type	Public interface / shared service spine
User journey	arrive → discover → test → hand back
Public value	shared access to methods and everyday scenes
Operations	wing steward + node operator
Safety gate	no partner confirmation = public capability card only
Exit	remove temporary service layer; keep baseline path

Mapped components: staffed service desk, shade/rest kit, demountable module, paper guide and public capability card.

North-south continuity

Conceptual delivery; no approval, partnership or deployment is implied.

North-south continuity result

Three-node / component mapping is explicit; all actions remain conceptual.

Spatial type	Linear public-space system
User journey	read → rest → cross → continue
Public value	safe, legible and inclusive movement
Operations	park operator + accessibility lead
Safety gate	traffic closure requires authority and staffed crossing
Exit	return to daily section after event

Mapped components: staffed service desk, shade/rest kit, demountable module, paper guide and public capability card.

Dazhongsi smart-native commerce

Conceptual delivery; no approval, partnership or deployment is implied.

Dazhongsi smart-native commerce result

Three-node / component mapping is explicit; all actions remain conceptual.

Spatial type	Mixed public-business interface
User journey	need → compare → try → opt out
Public value	transparent small-business innovation
Operations	yard steward + merchant committee
Safety gate	no sensitive profiling; human review for eligibility
Exit	disassemble module; preserve tenancy baseline

Mapped components: staffed service desk, shade/rest kit, demountable module, paper guide and public capability card.

Culture system and identity boundary

Conceptual delivery; no approval, partnership or deployment is implied.

Culture system and identity boundary

Cultural interpretation, wayfinding and CELL • JZ identity are separate layers.

Layer	Evidence / boundary	Spatial carrier
Jingzhang history	public railway sources; no undocumented claim	heritage gate / timeline / bilingual caption
Zhongguancun innovation	public innovation narratives; attribution required	service wing / maker wall
AI new culture	proposed future-facing interpretation; not official culture	weave platform / open lab

CELL • JZ

concept identity mark

Signage hierarchy

1 heritage source label; 2 bilingual route label; 3 optional concept identity. Never merge the culture mark with CELL • JZ logo.

Rights status: reference-only unless separately cleared; every text and mark has a source and replacement path.

Eight ecosystem cases

Conceptual delivery; no approval, partnership or deployment is implied.

Eight-case AI ecosystem atlas

Reference only: mechanism comparison, local translation and non-inference boundary are explicit.

Ten scene cards and three protocols

Conceptual delivery; no approval, partnership or deployment is implied.

Ten AI scene cards + three industry protocols

Every card names input status, model role, human fallback, privacy, failure, owner, maturity and KPI.

No consequential decision is automated; failure pauses the test and routes to a human.

Evidence and controls

Conceptual delivery; no approval, partnership or deployment is implied.

Evidence, confidence and control

Unknown and NULL are actionable states; no metric is a permit or a monitoring mandate.

Visible outputs use approximations; metrics.json preserves exact values and formulas.
