

Jing-Zhang In Place

IN-PLACE RENEWAL · STATUS × ACTION

01 / THE CITY

Jing-Zhang In Place Spatial Plan

An 11.4 km² conceptual field: keep the existing city working first; then decide where, when and how to renew through status, action and evidence gates.

A renewal field, not a mandatory spine

North, middle and south are not staged along an image-axis. They act through three distinct urban conditions: water-compound-arrival, public-side threshold and grade-separated station-city.

THREE KEY AREAS | ANNOUNCED NAMES + PROVISIONAL EXPRESSION

- Zhongzhiyuan AI Acceleration Area | approx. 192.1 ha
- Beijing AI Origin Community | approx. 104.3 ha
- Dazhongsi AI Industry Cluster | approx. 72.0 ha

Dashed extents are provisional geometry only—not redlines, parcels, ownership or station corners.

SYSTEMS WORK TOGETHER

- ordinary public route / regional arrival
- controlled threshold
- service / logistics / maintenance
- blue-green interface
- walking / cycling connection

AI APPEARS ONLY WHERE IT CHANGES SPACE

Three deep task packets enter controlled, reversible and reviewable carriers; ordinary learning, commerce, wayfinding and city life do not create a new building merely because of AI.

RC2 · deterministic offline export · 2026-08-14

Jing-Zhang In Place is not a compulsory image-axis. It is a heterogeneous renewal field organized by status, action and evidence gates.

Jing-Zhang In Place

Site and Evidence Boundary

Jing-Zhang In Place

IN-PLACE RENEWAL · STATUS × ACTION

05 / PROVE + PAUSE

Evidence, Unknowns and Gates: Prove Before Acting

Credibility does not come from more numbers. It comes from clearly separating known, derived, conceptual and survey-required conditions.

KNOWN / DERIVED

- provisional site geometry: 11.4 km²
- 17 control patches; 15 project families; 12 scenarios
- concept green/public ratios: 20.9% / 9.8%

DESIGN RULES

- retain first; status never authorizes action
- public route never depends on controlled campus interior
- no real task, spatial delta or safety condition = NO BUILD

UNKNOWN / PAUSE

- statutory FAR, height, rights, capacity and official boundaries
- building condition, heritage, road/rail engineering and environmental survey
- official data triggers full recalculation, not a footnote

IMPLEMENTATION JUDGMENT

Placing NO BUILD, survey, reversible testing, professional review and exit/reuse at the start of the project chain is what gives in-place renewal implementation credibility.

CONCEPT / PROVISIONAL EXTENT | NOT PARCEL, REDLINE OR ENGINEERING CONCLUSION

RC2 · deterministic offline export · 2026-08-14

Provisional geometry supports conceptual consistency; it never substitutes for official boundaries, parcels, rights or engineering survey.

IN-PLACE RENEWAL · STATUS × ACTION

02 / STATUS → ACTION

STATUS × ACTION Patch Atlas

Not a legend: each control patch moves from status to action, trigger and a perceptible spatial consequence.

CONCEPT / PROVISIONAL EXTENT | NOT PARCEL, REDLINE OR ENGINEERING CONCLUSION

STATUS	ACTION	TRIGGER	SPATIAL CONSEQUENCE
P-N1 BUILT / OPERATING STOP / GO: do not reduce continuity, emergency access, public use or safety	REPAIR	current access and maintenance audit confirms a safe public-side gap	regional arrival / compound edge arrival forecourt / shaded waiting / readable service edge
P-N3 SURVEY ONLY / UNKNOWN STOP / GO: do not reduce continuity, emergency access, public use or safety	ADAPT	real physical validation task + survey + fire/structure/rights approval	productive compound supervised test / reset-service / observation sequence
P-N5 VERIFIED ADAPTABLE STOP / GO: do not reduce continuity, emergency access, public use or safety	OPEN EDGE	operator confirms public-hours, accessibility and neighbour capacity	heritage/public-space edge heritage trace / public threshold / ordinary rest room
P-M1 CONTROLLED ACCESS STOP / GO: do not reduce continuity, emergency access, public use or safety	OPEN EDGE	public-side agreement and accessible route audit	campus/public threshold street / threshold room / scheduled controlled room
P-M4 SURVEY ONLY / UNKNOWN STOP / GO: do not reduce continuity, emergency access, public use or safety	ADAPT	carrier survey, ordinary-use demand and operator consent	adaptable public-side room/court public room / bookable table / reversible controlled side
P-S2 SURVEY ONLY / UNKNOWN STOP / GO: do not reduce continuity, emergency access, public use or safety	SUBDIVIDE / RECONNECT	survey verifies clearance, safety, rights and maintenance	underpass/bridge threshold daylight / crossing decision / protected service edge
P-S3 APPROVED / IN DELIVERY STOP / GO: do not reduce continuity, emergency access, public use or safety	OPEN EDGE	current project status, tenant continuity and operator agreement	mixed renewal frontage active ground floor / calm upper edge / legible service side

RC2 · deterministic offline export · 2026-08-14

From status to action, trigger and spatial consequence; not a colour legend.

Jing-Zhang In Place

Three Key Areas | Overview

Jing-Zhang In Place

IN-PLACE RENEWAL · STATUS × ACTION

03 / THREE PLACES

Three Key Areas: Three Spatial Objects

North water—compound—arrival; middle public-side campus threshold; south grade-separated station city. They do not share one formal answer.

ZHONGZHIYUAN AI ACCELERATION AREA

water → public landscape → controlled productive / service edge

BEIJING AI ORIGIN COMMUNITY

street / park → ordinary public room → reversible control → campus

DAZHONGSI AI INDUSTRY CLUSTER

arrival → walking / cycling → mixed frontage → professional adoption

Urban-space sequence (concept illustration): regional arrival → ordinary city → public threshold → adapted carrier → controlled task → ordinary city

Water—compound—arrival, public-side threshold and grade-separated station city: three spatial objects and three implementation starts.

Jing-Zhang In Place

Zhongzhiyuan | Water, Compound and Regional Arrival

ZHONGZHIYUAN AI ACCELERATION AREA

water → public landscape → controlled productive / service edge

Concept section: people, ground, walk/cycle, public/control relation, service and reversible state appear together.

Water → public landscape → controlled productive/service edge. Without a real task, carrier and safety condition, no validation space is built.

Jing-Zhang In Place

AI Origin | Public-side Campus Threshold

BEIJING AI ORIGIN COMMUNITY

street / park → ordinary public room → reversible control → campus

Public routes remain outside campus; ordinary learning rooms and courts come first, while controlled project state must be reversible.

Jing-Zhang In Place

Dazhongsi | Ordinary City in Grade-separated Mobility

DAZHONGSI AI INDUSTRY CLUSTER

arrival → walking / cycling → mixed frontage → professional adoption

Concept section: people, ground, walk/cycle, public/control relation, service and reversible state appear together.

A typological station-city field: audit four-way access, surface continuity and service before considering any carrier.

Jing-Zhang In Place

Mobility, Blue-green and Operations

Jing-Zhang In Place

IN-PLACE RENEWAL · STATUS × ACTION

04 / MOVE + BREATHE

Move, Breathe and Service: One Operable Urban System

Walking, accessibility, cycling, regional arrival, service/maintenance and blue-green public realm are coordinated in one urban section—not overlaid as separate systems.

FIVE RELATIONS, NOT ONE LINE

- ordinary public route / regional arrival
- controlled threshold
- service / logistics / maintenance
- blue-green interface
- walking / cycling connection

Public routes do not depend on campus interior; service and maintenance are not hidden by landscape; grade-separated connections begin with access and continuity audit.

BLUE-GREEN IS NOT BACKGROUND

Root zones, drainage, shade, rain refuge, maintenance access and night boundaries together determine whether public space works.

AI OFF STILL HOLDS

Fixed signs, physical alternatives, staffed help, public space and service protocols remain usable when digital systems are off.

CONCEPT / PROVISIONAL EXTENT | NOT PARCEL, REDLINE OR ENGINEERING CONCLUSION

RC2 · deterministic offline export · 2026-08-14

Walking, accessibility, cycling, service/maintenance and ecological operations work together in one urban field.
