

Jing-Zhang Climate Symbiosis Corridor

AI for urban cooling, water retention, energy coordination, and biodiversity

Concept: One Spine, Three Anchors, Six Gar

A cool mobility spine links climate data, sponge facilities, inclusive services, and low-carbon renewal

Provisional rough boundary · Conceptual recommendation · Recompute with

- 01 Cool mobility spine
- 02 Climate Data Tower
- 03 Four-Season Plant Lab
- 04 Visible Rainwater Plaza

Land Use and Climate Functions

A complete partition assigns climate roles to research, blue-green, service, and all-age community land

Provisional rough boundary · Conceptual recommendation · Recompute with

- 0802 Climate innovation and retrofit
- 1401 Continuous blue-green park
- 05 Climate services and mixed use
- 0702 All-age community services

Three Key Areas, Three Validation Roles

Zhongzhiyuan tests systems, AI Origin supports open collaboration, and Dazhongsi translates services

Provisional rough boundary · Conceptual recommendation · Recompute with

- N Zhongzhiyuan: system tests
- M AI Origin: open collaboration
- S Dazhongsi: urban translation

Jing-Zhang Climate Symbiosis Corridor

AI for urban cooling, water retention, energy coordination, and biodiversity

Cool Mobility × Blue-Green Sponge × Inclusive

Continuous north-south movement and east-west stitches coordinate shade, water, habitat, and rest

Provisional rough boundary · Conceptual recommendation · Recompute with

- 75% walk-shade target
- 5 rain-garden modules
- 6 inclusive rest/service nodes
- 0 individual tracking or face ID

Evidence Chain and Annual Climate Check-U

Targets, measured outcomes, and missing inputs stay distinct to prevent false performance claims

Provisional rough boundary · Conceptual recommendation · Recompute with

75%
Walk-shade target

1×/年
Climate check-up

Outcome metrics await baselines and professional models

- 1 Citizen observations
- 2 Professional monitoring
- 3 AI forecasts
- 4 Human review
- 5 Annual release
