From Survey and Naming to Civic Calibration

History is not ornament; it is a Beijing method for working with the world.

Land Use & Open Courtyard Interfaces

Shared out lines close the partition; all ratios recalculate on official geometry

Four access levels: public · timed/booked · controlled trial · secure closed

Four Civic Components: Making Governance Tangible

No copied rails, scriptures or faux heritage; use measure, marginalia, revision marks and the open courtyard.

Renderings communicate spatial relationships and material character; they do not depict surveyed buildings, exact parcels or construction documents.

Seven Enablers × Three Prototypes × Seven Co-authors

Compute does not own the ecosystem; place, institutions, people and exit rules shape public value.

Twelve Scenarios: From Everyday Problems to Reversible Pilots

Every scenario binds users, operators, data, human fallback, stop conditions and a versioned Reply.

Six Gates, Three Keys, and a Sunset-by-Default Rule

Easy to pause, hard to continue: pilots scale by evidence, never by inertia.

Evidence Opens the Gate; the Calendar Does Not

Five stages are independently useful, pausable and reversible; the Commons High Line remains conditional.

MINIMUM EVIDENCE AT EVERY GATE

Commons High Line: do not start unless structural safety, fire egress, accessibility, ownership and lifecycle operation are all evidenced.

DEFAULT: build the continuous ground-level commons first.
