

All Minds Archived, A Reply from Jinghua

Mapping Beijing through Civic Intelligence

Global Knowledge, Calibrated with Beijing's Everyday Life

Open Courtyard · Verify · Sunset · Reply

Global knowledge and Beijing's everyday questions are translated together, re-tested in bounded spaces, accepted, refused or revised by the public, then returned as a bilingual City Reply.

Three Scopes and Overall Structure

Provisional geometry visible; areas reproducible

Structure & Evidence Status

One commons · three prototypes · two wings · Open Courtyard · conditional high line

Proof Garden

VERIFY

Co-making Courtyard

MAKE

Resonance Test Market

TRY

Zhongguancun Service Wing ↔ prototypes ↔ Xiaoyue
Scenario Wing
Any node may return to translation, verification or exit.

From Survey and Naming to Civic Calibration

History is not ornament; it is a Beijing method for working with the world.

Land Use and Open Courtyard

Shared cuts form a closed design partition

Land Use & Open Courtyard Interfaces

Shared cut lines close the partition; all ratios recalculate on official geometry

Four access levels: public · timed/booked · controlled trial · secure closed

Three Key Areas

Three spaces are three institutions of openness

Three Key Areas: Three Institutions of Openness

Type-design prototypes, not precise parcel masterplans

Proof Garden

Controlled but observable: AI proves itself before entering daily life

Concept rendering; not a surveyed building, exact parcel or construction document.

Co-making Courtyard

Bounded but enterable: residents and global teams translate and make together

Concept rendering; not a surveyed building, exact parcel or construction document.

Resonance Test Market

The public may choose and refuse; failure also enters the Reply

Concept rendering; not a surveyed building, exact parcel or construction document.

AI Ecosystem and Co-authors

Seven enablers, three prototypes, seven co-author groups

Seven Enablers × Three Prototypes × Seven Co-authors

Compute does not own the ecosystem; place, institutions, people and exit rules shape public value.

Twelve AI+ Scenarios

Every scenario binds human fallback, stop conditions and a Reply

Twelve Scenarios: From Everyday Problems to Reversible Pilots

Every scenario binds users, operators, data, human fallback, stop conditions and a versioned Reply.

SUCCESS + FAILURE

Mobility, Blue-Green and Two Lines

Three routes overlap; heritage above and operation below read together

Mobility, Blue-Green & Two Lines Section

Three routes overlap; surface heritage and active rail below are read together

Service Benchmark

Centennial Engineering

Open Courtyard Living

SURFACE: CENTENNIAL HERITAGE COMMONS

BELOW: ACTIVE RAIL

Commons High Line = conditional branch; no engineering claim before structure, ownership and operation review

Four Civic Components

Make responsibility, versions and feedback tangible

Four Civic Components: Making Governance Tangible

No copied rails, scriptures or faux heritage; use measure, marginalia, revision marks and the open courtyard.

TIANYOU COMMONS TABLE

A working table with datum marks and replaceable problem cards for discussion, re-test and public explanation.

01 · OPEN / VERIFY / REPLY

LIVING GLOSSARY WALL

Versioned bilingual terms record who named, revised, or rejected a translation.

02 · OPEN / VERIFY / REPLY

CITY REPLY DESK

Paper, tactile and low-screen display gives success, dissent, pause and failure equal visibility.

03 · OPEN / VERIFY / REPLY

PILOT AUDIT PLAQUE

One plaque shows owner, data, human fallback, expiry, stop condition and public version.

04 · OPEN / VERIFY / REPLY

Six Gates and Sunset Governance

Easy to pause, hard to continue

Six Gates, Three Keys, and a Sunset-by-Default Rule

Easy to pause, hard to continue: pilots scale by evidence, never by inertia.

Evidence-Gated Delivery

No calendar back-planning; five stages remain useful, pausable and reversible

Evidence Opens the Gate; the Calendar Does Not

Five stages are independently useful, pausable and reversible; the Commons High Line remains conditional.

MINIMUM EVIDENCE AT EVERY GATE

- Accountable legal owner
- AI-free service equivalence
- Affected-user co-sign
- Executable removal plan
- Independent re-test
- Bilingual public Reply

Commons High Line: do not start unless structural safety, fire egress, accessibility, ownership and lifecycle operation are all evidenced.

DEFAULT: build the continuous ground-level commons first.

Metrics, Commitments and Evidence

Finite values are reproducible; low confidence remains visible

Metrics, Commitments & Evidence

Finite values are reproducible; low confidence remains visible

Sources, Risk and Rights

Concept proposal, not statutory planning or professional engineering documentation

Data boundary: the overall boundary and three key areas use repository provisional geometry. Regulatory controls, ownership, surveyed buildings, road redlines, utilities, fire, heritage and engineering conditions await formal data.

Image rights: three spatial renderings were generated originally for this proposal with the OpenAI image-generation tool on 2026-08-16, with no reference-image input; see [visual/assets/image-generation-record.json](#). All other figures, prose, GeoJSON, web pages and PDFs were produced by OpenAI Codex for this package. The frozen logo was provided and approved by the user for this submission.

External material: only traceable textual facts and mechanisms are cited; no photographs, map tiles, artifact patterns, logos or webpage layouts are copied.

Statement: all implementation content is a concept proposal, reference scheme and subject for further professional study.
