

Jingzhang AI Corridor Rail City — Concept Overview

One spine, three yards, two loops: heritage green spine x three innovation yards x stitch corridors & cycle loop

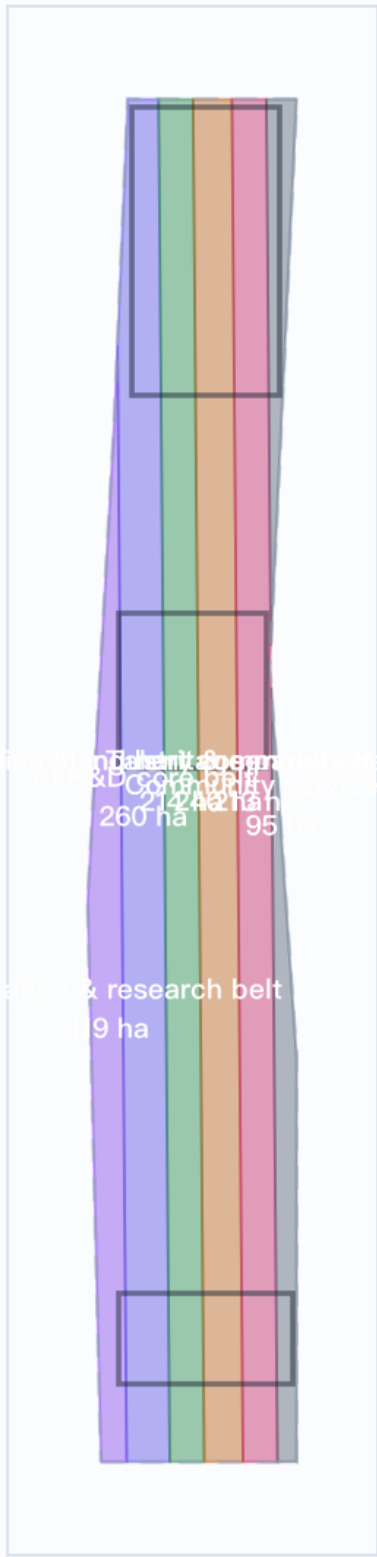

Derived from package geometry/*.geojson; provisional repository boundary shown dashed, not an official redline.

Provisional boundary · 概念建议 · not statutory

Land-Use Structure — Six Functional Belts

Education to industry west–east with the park spine centered; full coverage, no overlap (EPSG:4548)

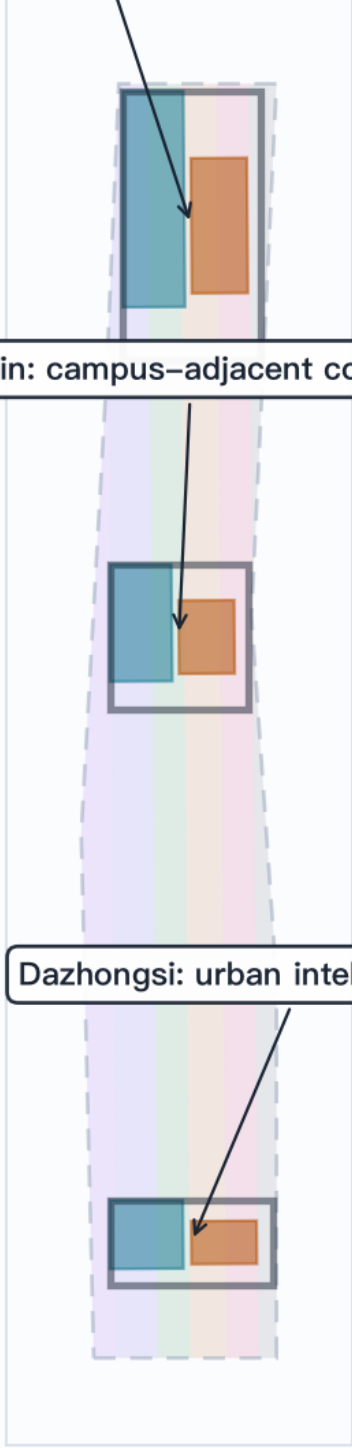

- Education & research 119 ha
- AI R&D core 260 ha
- Heritage park belt 214 ha
- AI industry & service 240 ha
- Talent community 213 ha
- Community service 95 ha
- Key areas

Areas recomputed from land_use.geojson in EPSG:4548; codes follow the project land-use classification subset.

Provisional boundary · 概念建议 · not statutory

Three Key Areas — Detailed Design Index

Zhongzhiyuan: full-stack autonomy; middle yard: campus-adjacent conversion; south yard: urban intelligent economy

- Public commons
- Concept massing
- Three key areas

Key-area polygons are repository provisional placeholders; building groups are concept massing only.

Provisional boundary · 概念建议 · not statutory

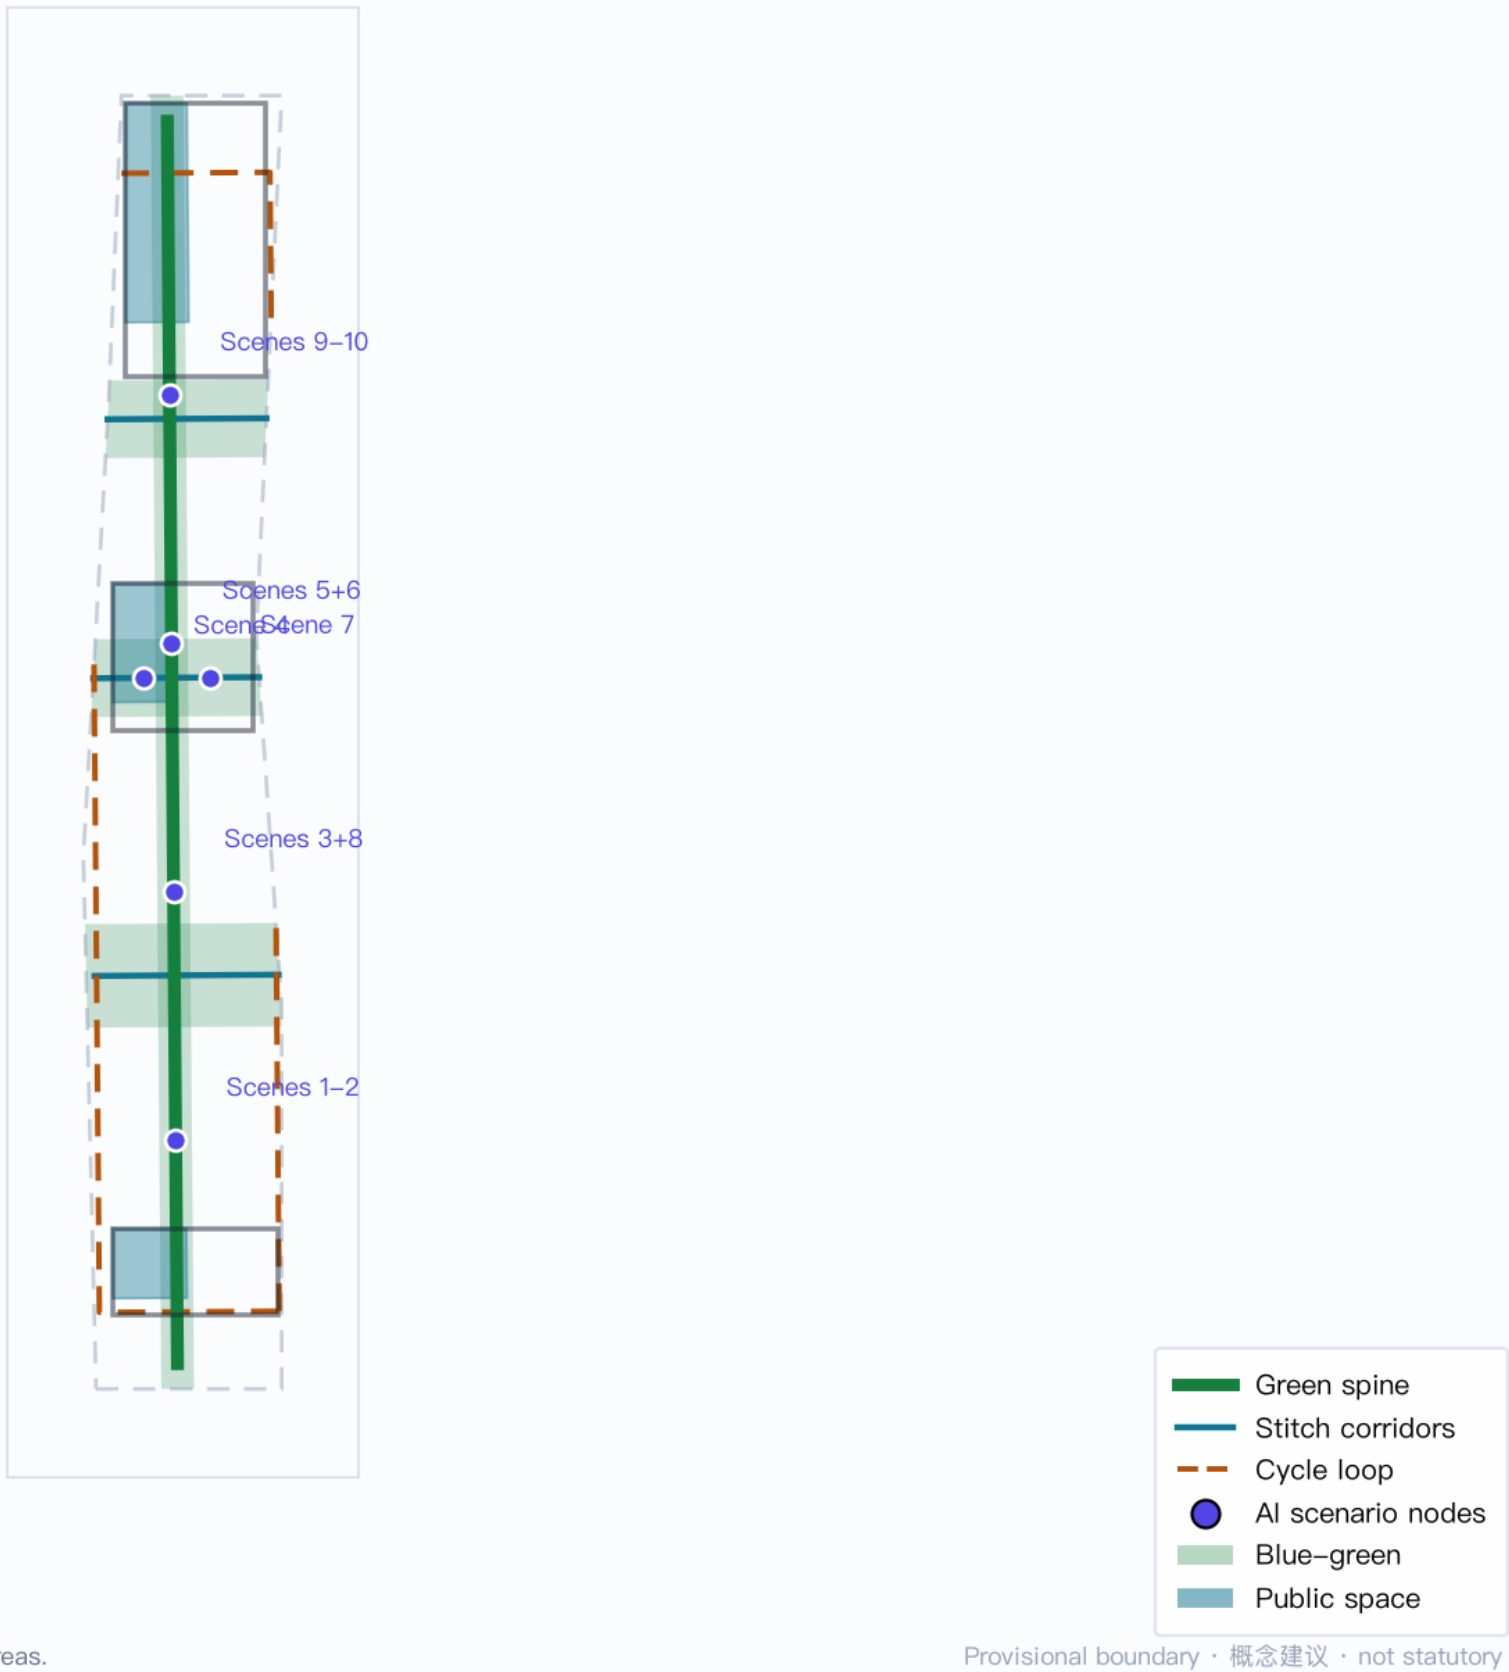

Six full-coverage belts (EPSG:4548): education 1.19 / R&D 2.60 / park 2.14 / industry 2.40 / housing 2.13 / service 0.95 km².

Renewal framework: re-sort (Origin) · insert (Dazhongsi) · new clusters (Zhongzhiyuan); parcel conclusions pending survey.

9 concept projects: JZ-01 spine · JZ-02 corridors · JZ-03 loop · JZ-04/05/06 clusters & stitching · JZ-07 commons · JZ-08 waystations · JZ-09 protocol.

Mobility x Blue-Green Public Space System

One spine, three stitch corridors, one loop, AI nodes along: slow-mobility first, stitched, continuous, accessible

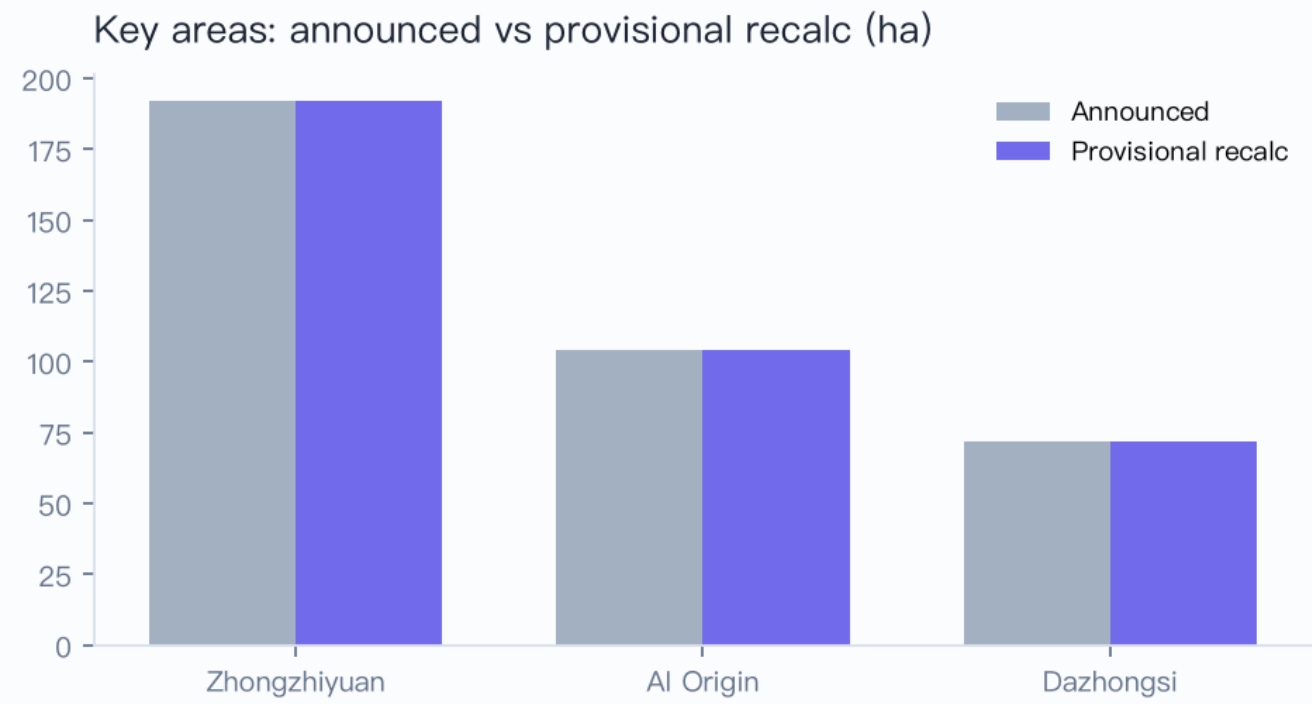

Mobility: spine 9.3 km + three stitch corridors (ring/road severance) + cycle loop threading six belts; rail anchors at three stations.
Blue-green: park belt + three wedges, 35.0% green (provisional); conservative blue-line distances.
Compliance: all 17 announcement items + agent.1-6 across 23 matrix entries; four gates PASS (intake).
Evidence chain: GeoJSON → metrics (formula+source) → HTML (matching data-metric) → self_check; wholesale recalc upon official data.

Core Metrics Recalculation & Evidence Chain

All metrics recomputable from package GeoJSON in EPSG:4548; provisional values keep low confidence and recalc triggers

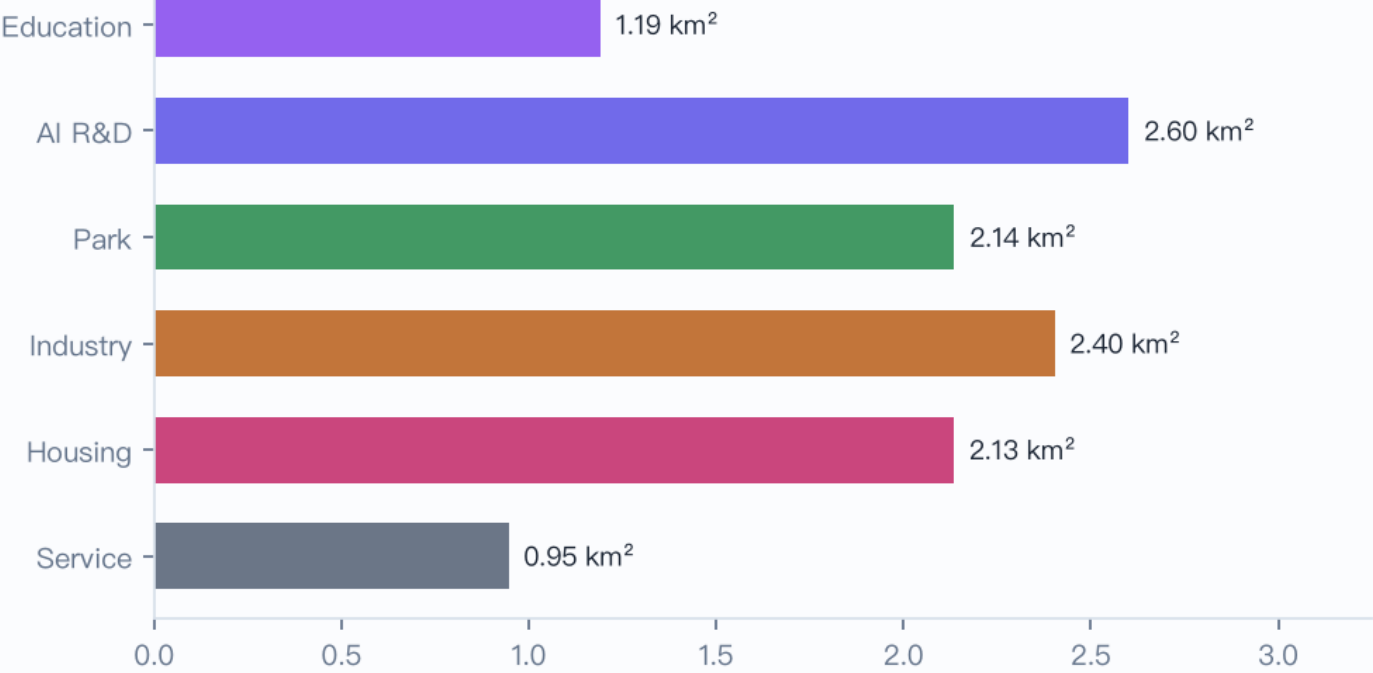

Core visual metrics (known, low-confidence provisional)

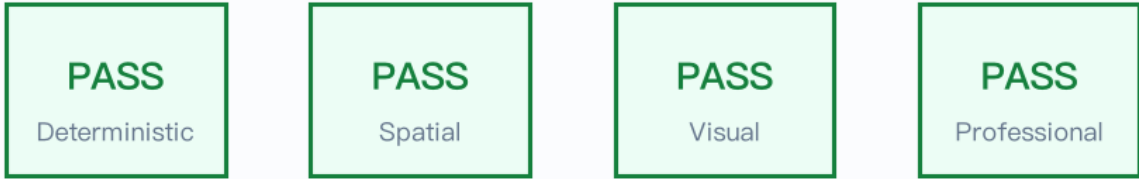

Evidence chain: geometry → metrics.json (formula+source) → visual/index.html (matching data-metric) → self_check.json four gates.

Provisional boundary · 概念建议 · not statutory

Land-use structure (full coverage)

Self-check status & compliance coverage

Coverage: all 17 announcement tasks + agent.1-6 covered in compliance_matrix (23 entries)

Unknown metrics: FAR, height, density (pending official controls) stay unknown
