

JING-ZHANG COOLING COMMONS

An AI innovation belt for heat resilience and
public care

ONE SPINE / THREE HUBS / SIX GATES / TWELVE
REFUGES / TWO WINGS

CONCEPT PROPOSAL - PROVISIONAL GEOMETRY IS NOT AN OFFICIAL REDLINE

01 COOLING COMMONS: ONE SPINE LINKS THREE HUBS

A verifiable infrastructure network of shaded movement, east-west gates and public-care nodes

1 / 3 / 6 / 12
SPINE / HUBS / GATES / REFUGES

- 01 CIVIC CLIMATE SPINE**
Continuous shade, blue-green sponge and transit access organize daily walking
- 02 HUMAN FALLBACK**
Water, seating, first aid and help remain available without scanning or facial recognition
- 03 THREE CIVIC LANDMARKS**
Heritage pavilion, validation wall and adoption accountability hall

PROVISIONAL CONSTRAINT
The quiet dashed outline supports generation and review only; it is not an official redline.

Derived from submitted GeoJSON, metrics.json and self_check.json; provisional geometry is not an official redline.

02

SPACE IS NOT A COLOR BLOCK: FOUR FAMILIES SUPPORT ONE CIVIC SPINE

A recomputable relationship between the complete land-use partition, blue-green space, public space and building footprints

COMPLETE PARTITION

AI R&D + VALIDATION

2.67 km2 / 23.4%

PARK + OPEN SPACE

2.59 km2 / 22.7%

INDUSTRY + COMMERCE

3.37 km2 / 29.5%

COMMUNITY SUPPORT

2.78 km2 / 24.4%

DESIGN JUDGEMENT

Complete coverage is only the base. The design story is how the cooling spine turns R&D, green space, services and community support into a walkable civic system with human fallback.

已知 / KNOWN GREEN 12.3% PUBLIC 7.3%

待补 / PENDING FAR / HEIGHT / STATUTORY CONTROLS

Derived from submitted GeoJSON, metrics.json and self_check.json; provisional geometry is not an official redline.

03 THREE HUBS, ONE CHAIN: VALIDATE, TRANSLATE, ADOPT

Three provisional key areas connect through distinct tasks, scenario nodes and visible public accountability

- 01

ZHONGZHIYUAN
Climate algorithms, material comparisons, standards workshops
- 02

AI ORIGIN COMMUNITY
Open tools, talent community, campus-to-city translation
- 03

DAZHONGSI
Public adoption, plain-language explanation, opt-out and appeal

- 5 PRIORITY PERSONAS

Outdoor workers

Older people + carers

Children + families

Developers + startups

Commuters + visitors
- 3 CIVIC LANDMARKS

01 Qinghuayuan heritage pavilion

02 Validation contribution wall

03 Adoption accountability hall

COMMON BOUNDARY

All three areas are provisional constraints. Spatial moves are concepts for professional development, not approvals, investment commitments or parcel-level decisions.

04

COOL MOBILITY: SHADE + BLUE-GREEN SPONGE + HUMAN SERVICE

Six shaded gates bridge breaks; twelve refuges keep basic care available when digital services are off

HEAT-DAY SERVICE STACK

- 01

SHADE + WATER

Civic basics
- 02

REST + FIRST AID

No sign-in
- 03

HUMAN HELP

Available when digital services are off
- 04

OPTIONAL AI ADVICE

Public rules, expiry and appeal

NETWORK READINGS

- 12

COOLING REFUGES
- 06

SHADED GATES
- 01

CONTINUOUS SPINE

NO TRACKING BY DEFAULT

No persistent facial or child tracking. Route advice can be disabled; basic wayfinding remains offline.

Derived from submitted GeoJSON, metrics.json and self_check.json; provisional geometry is not an official redline.

05

EVIDENCE CHAIN: GEOMETRY, METRICS, SCENARIOS, REVIEW

Known values come from submitted geometry; statutory intensity and thermal performance remain pending official data and field baselines

KNOWN VALUES

11.41 km2

SITE

12.3 %

GREEN

7.3 %

PUBLIC SPACE

31.08 ha

FOOTPRINT

COVERAGE GATES

23/23

Brief + Agent tasks

15/15

Design depth

6/6

Professional standards

4/4

Self-check gates

PENDING OFFICIAL DATA

FAR, building height, statutory intensity, road redlines, ownership, utilities and field thermal-comfort baselines

Recompute the whole package when official polygons arrive; do not replace the boundary alone.

Derived from submitted GeoJSON, metrics.json and self_check.json; provisional geometry is not an official redline.

01 HERITAGE + INNOVATION

- STATION F: former freight hall becomes an accessible mixed startup campus
- Barcelona 22@: industrial renewal keeps living, learning and public space together

02 OPEN PILOTING

- Punggol: open data and stop conditions precede reuse
- Kalasatama: reversible short pilots before transfer

03 PUBLIC GOVERNANCE

- Superilles: return intersections and interior streets to staying, greenery and slow movement
- Quayside: digital governance and accountability precede sensors

1

KEEP THE MEMORY

Retain legible railway structures and place memory; insert new uses into a publicly accessible spatial frame.

2

PILOT IN PUBLIC

Publish assumptions, error and stop conditions; keep pilots reversible, comparable and transferable.

3

GOVERN BEFORE SENSING

Set data minimization, ownership, opt-out and appeal before sensors or automation.

TRANSFER TEST

Transfer mechanisms, not appearances: every precedent must be revalidated against Jing-Zhang place, climate and governance conditions.

01 LOW-RISK FIRST

- Validate water, shade, seating, first aid and human help first
- Phase one uses reversible refuge and material pilots only

02 RECOMPUTE AS ONE

- Recompute all layers, metrics and figures when official boundaries arrive
- FAR, height, road redlines and ownership remain pending

03 HUMAN REVIEW

- Every AI suggestion states data, responsibility, expiry, opt-out and appeal
- The concept supports professional development; it is not a government commitment

1

BASICS FIRST

Water, shade, rest, first aid and human help never depend on accounts, scanning or facial recognition.

2

REBUILD ON OFFICIAL DATA

A boundary change triggers every layer, metric, scenario card and figure, preventing version drift.

3

HUMANS OWN THE OUTCOME

Each AI suggestion needs an owner, expiry, explanation, opt-out and appeal; high-impact decisions never execute automatically.

TRANSFER TEST

Start with reversible public care, then add explainable intelligence; where official data is absent, state pending status instead of disguising concept precision as statutory precision.
