

Jing-Zhang Open Ledger: A Traceable AI Public-Return Belt

From centennial track trace to a traceable AI public-return belt

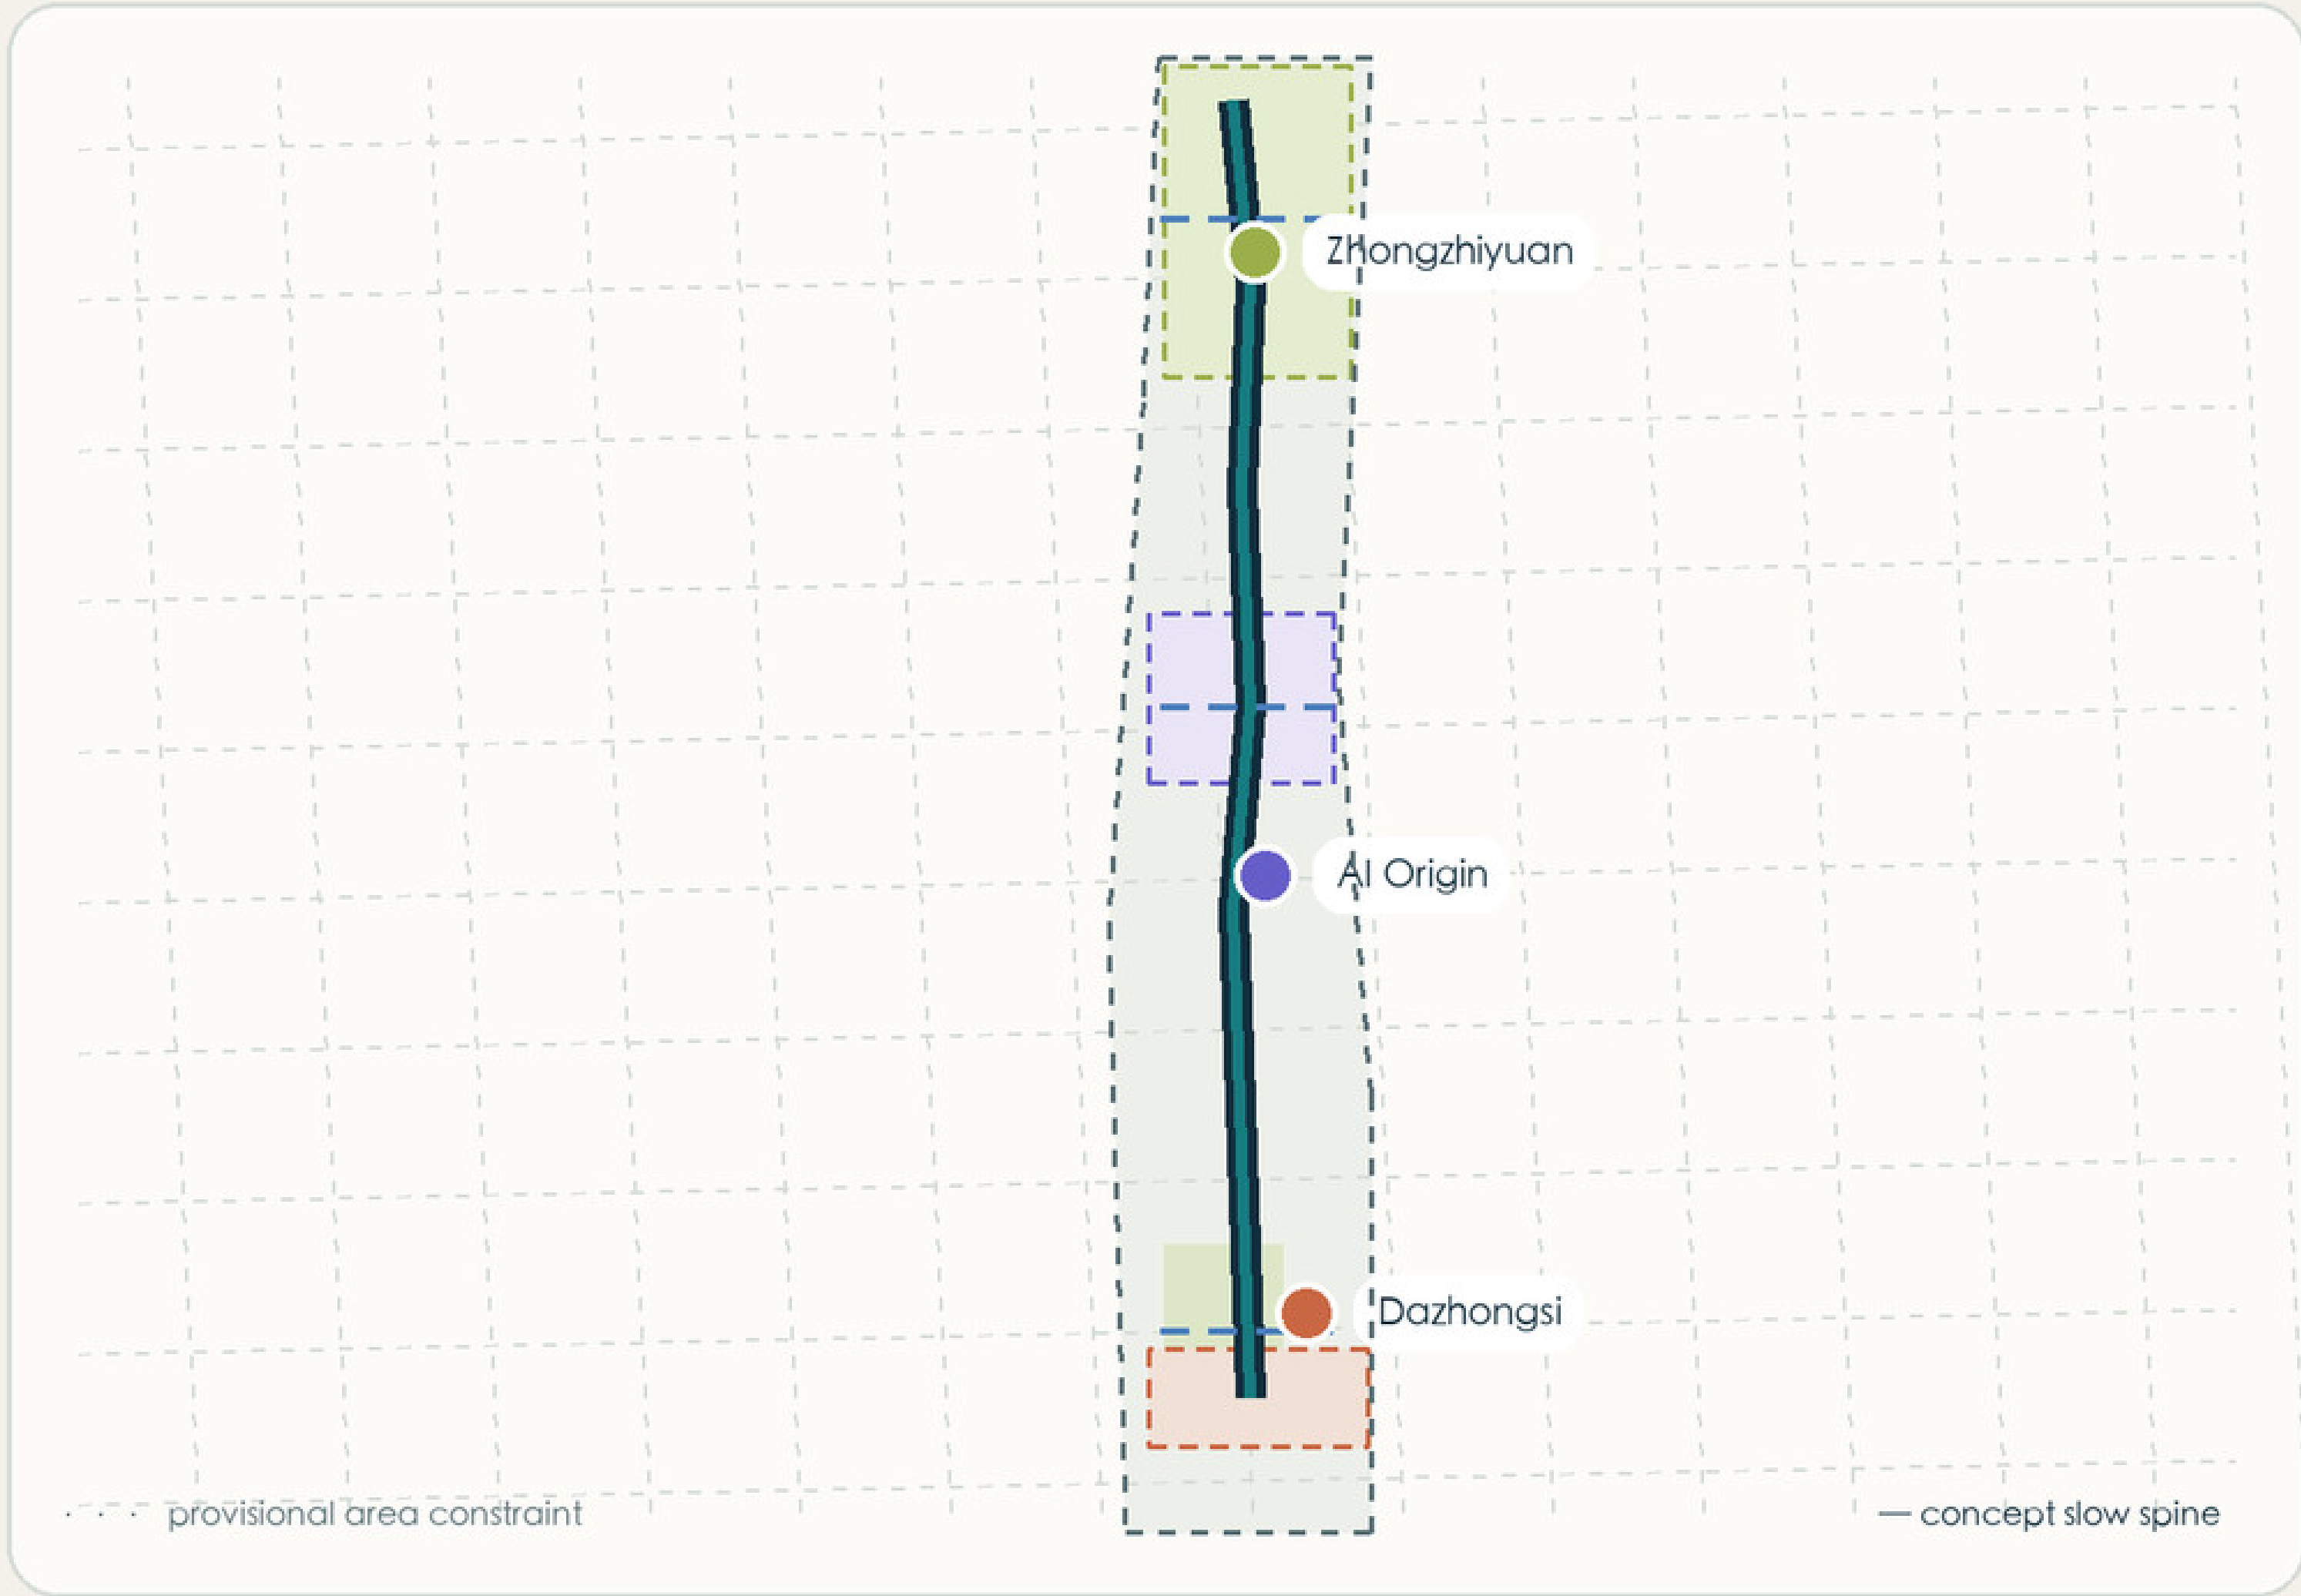

CONCEPT / PROVISIONAL GEOMETRY: not a redline, engineering drawing, or approval basis.

J· Z COMMONS / 京张公地

One heritage line, three civic commons

Track trace, commons, and public receipts organize the three areas and two wings; the provisional boundary stays secondary.

CONCEPT / PROVISIONAL GEOMETRY

资料：公开征集与资料包 | 空间图层：概念建议 + 暂定几何，非红线、非工程图、非审批依据

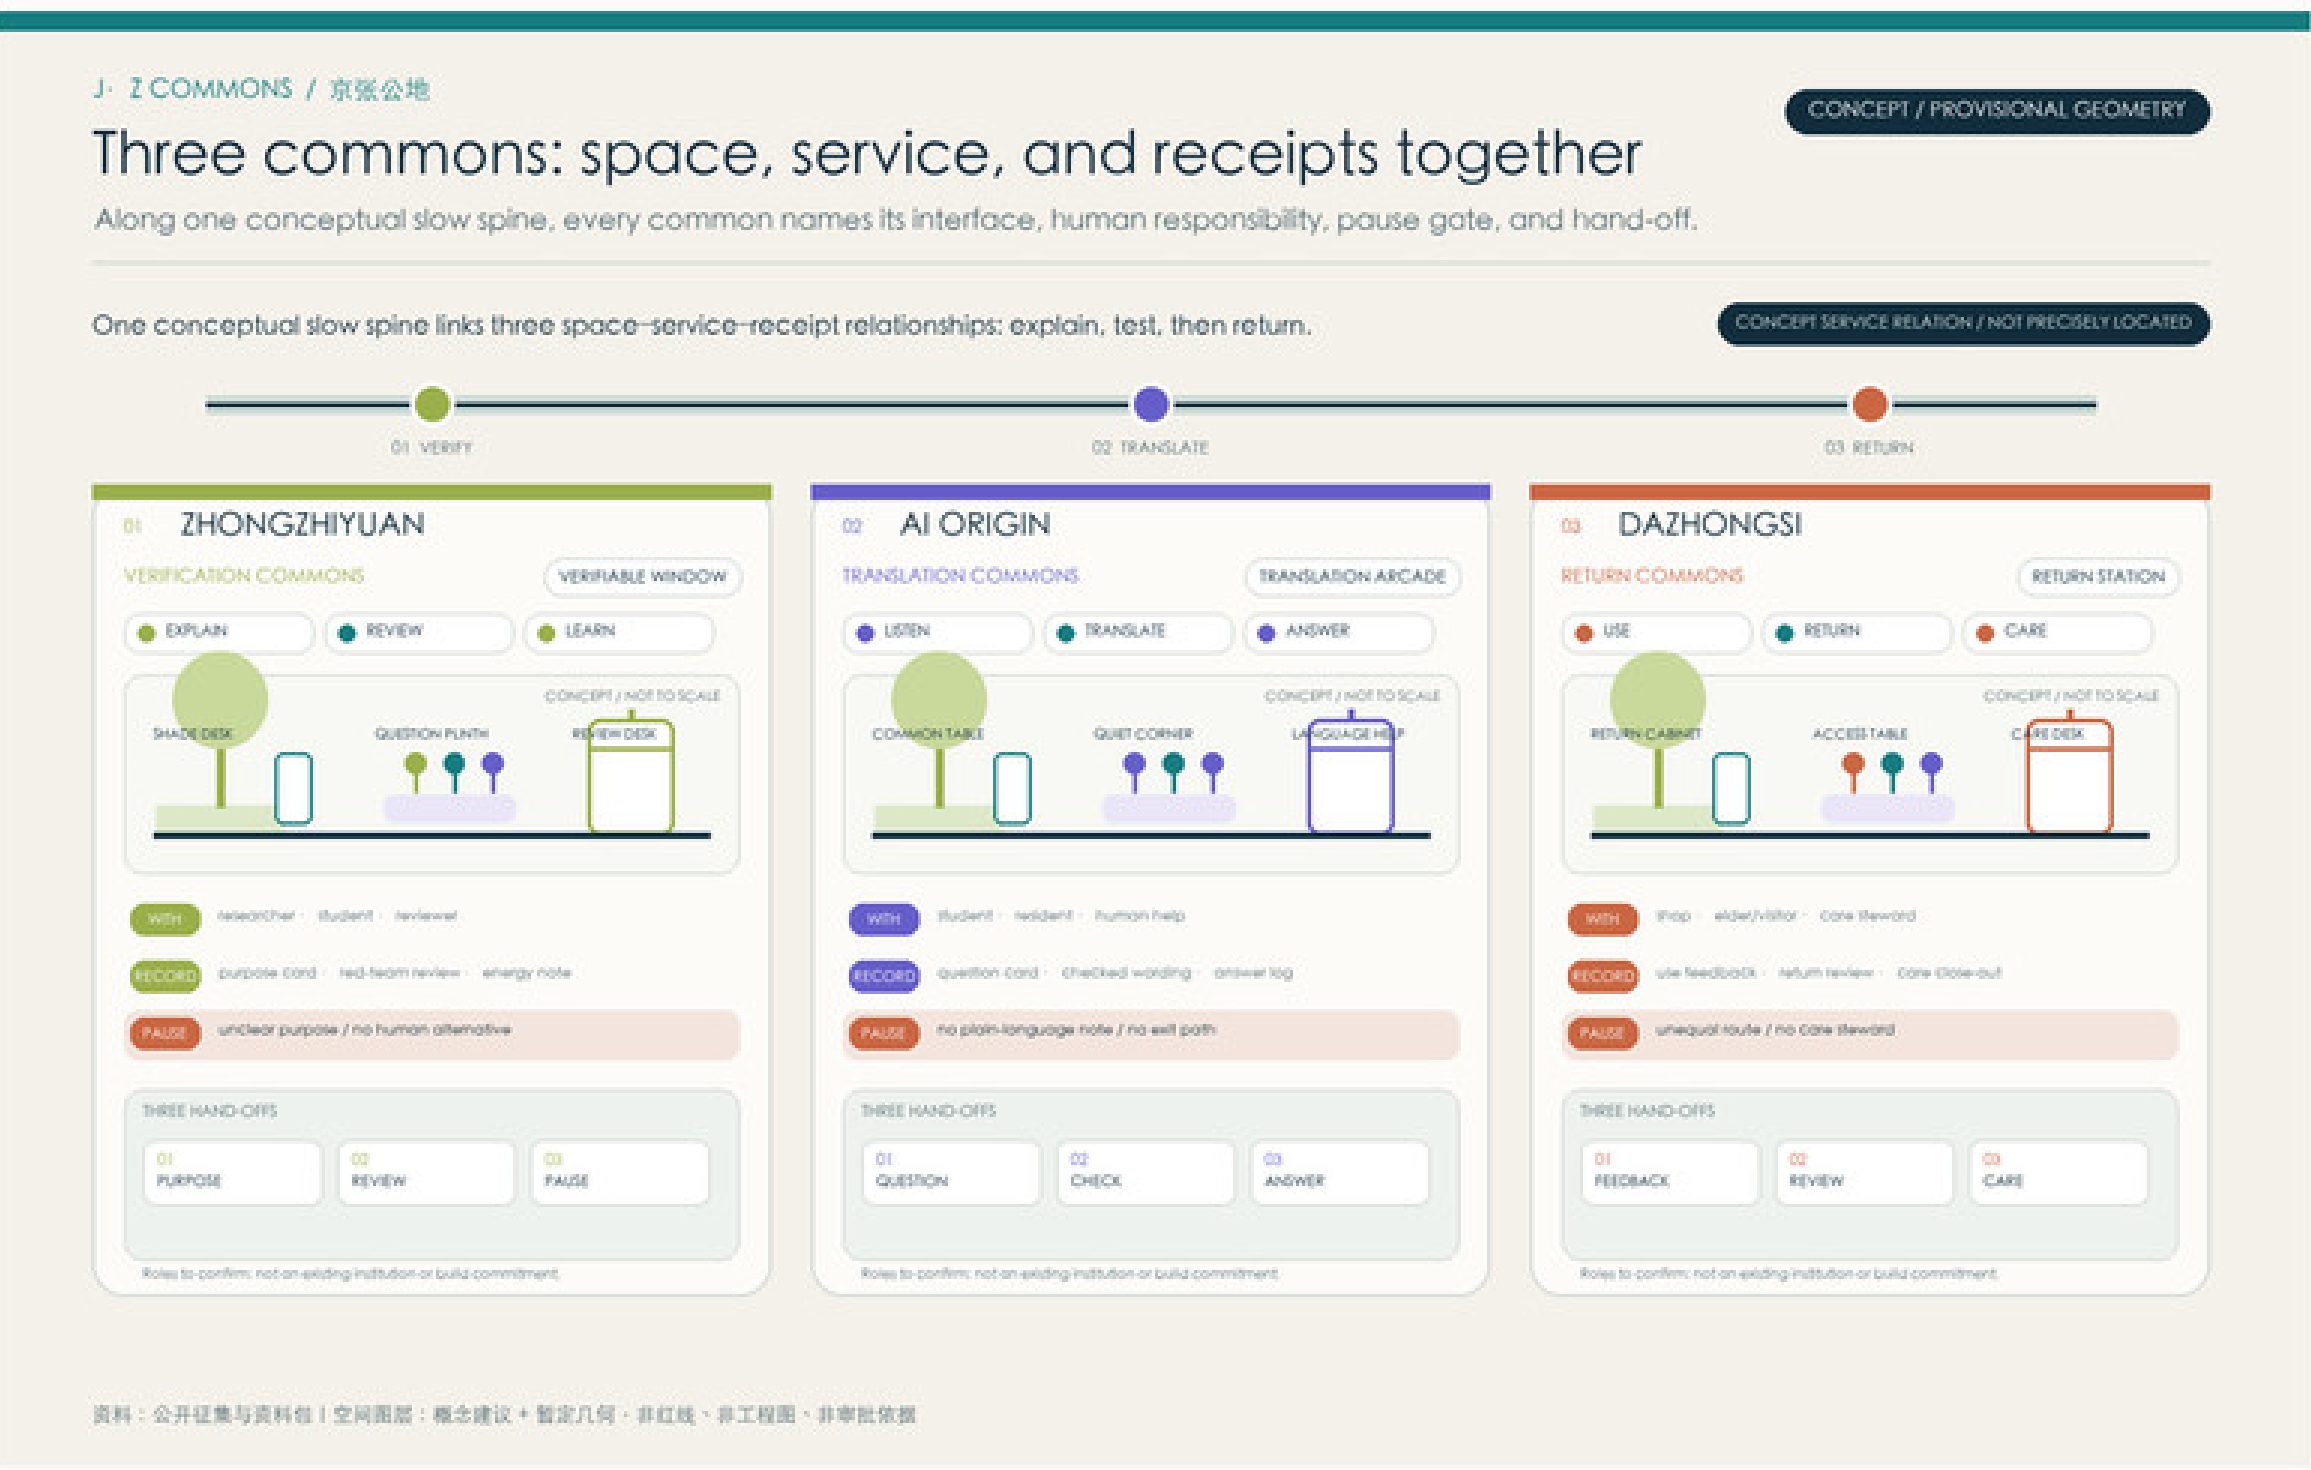

Spatial grammar

- 01 轨痕 / Track trace**
A continuous walkable public frame carries the railway's temporal memory.
- 02 三处公地 / Three commons**
Verification, translation, and return are spatially distinct—not one generic AI campus.
- 03 五张凭据 / Five receipts**
Source, test, release, review, return: each names a steward, review date, and stop condition.

两翼 / Two wings
Zhongguancun service wing: make IP, capital, compute, and conversion approachable. Xiaoyuehe scenario wing: test ecology and everyday service with low data and a clear exit path.

02 三处公地 / THREE COMMONS

Zhongzhiyuan: Verifiable Window | AI Origin: Translation Arcade | Dazhongsi: Return Station. Landmarks are service interfaces, not isolated sculpture.

资料：公开征集与资料包 | 空间图层：概念建议 + 暂定几何，非红线、非工程图、非审批依据

01 总体关系 / OVERALL RELATION

One heritage slow-mobility, climate, and service spine joins verification, translation, and return into a readable, questionable, pausable daily civic interface.

03 公共界面 / PUBLIC INTERFACE

RELATIONS, NOT RENDERS
The verification edge helps people understand; the translation arcade lets them co-edit; the return front room brings care and objection into the next question.

Original concept visualization: relationships to be reviewed, not existing conditions, scale, engineering, heritage, operation, or approval.

04 场景—证据—回报 / SCENARIO—EVIDENCE—RETURN

Synthetic replay: 1 accepted / 6 rejected; the 90-day zero phase and cost method are not started. Provisional area 11,412,825 m²; rerun all spatial values when official geometry arrives.
