

CORE IDEA

One old railway, three new lives.

Not another technology corridor, but a civic-life spine people can understand, sit in and choose to revisit.

Design impression / not a site photograph or approval basis

01 / OVERALL SPACE

Next Stop: Jingzhang

One civic-life spine connects three different questions in the real city.

Base map: OpenStreetMap contributors / ODbL, queried 2026-08-11. Design routes are conceptual and pending official data.

The map is primary evidence. Real rail, roads, water, parks and stations provide context; all study boundaries are provisional.

ONE OLD RAILWAY THREE NEW LIVES

- Easier to walk**
Independent ten-minute loops, shade and seats.
- Easier to learn**
Open classes and places to make things together.
- Easier to ask**
Large-print wayfinding and a staffed desk.
- Able to participate**
Speak, write, check progress and ask for

1909 — 1949 — TODAY
Built with resolve / Journey to the capital / Solve together
All study boundaries are provisional and not official planning lines.

Zhongzhiyuan: safe?

The garden stays open; the test takes one small staffed bay and can stop at once.

AI Origin: take part?

Residents confirm the problem before teams make prototypes; resident material is not training data.

Dazhongsi: easier?

Large-print wayfinding, rest and accessibility help work without a smartphone.

1909

Built with resolve

Remember the courage and method of solving real problems.

1949

Journey to the capital

Qinghuayuan Station is an independent verified red-history anchor.

TODAY

Solve together

Residents, teams and reviewers answer safety, participation and convenience.

Boundary note: official boundaries are not yet available. Spatial records, areas, metrics and text must be recalculated together when they arrive.

Three New Lives

Not the same pavilion with three different names

06 / SPATIAL PROTOTYPES

Three places need three different spatial characters

Plans and sections first show movement, pause and responsibility; architecture follows official site conditions.

ZHONGZHIYUAN / Safety Test Garden

The garden stays primary. A small test bay, public bypass and stop control coexist.

Concept spatial prototype / not a construction drawing

AI ORIGIN / Co-creation Station

Residents confirm the problem first. A shared table links discussion and making beside an open street edge.

Concept spatial prototype / not a construction drawing

DAZHONGSI / City Service Living Room

A continuous accessible route links arrival to a staffed desk, with large print, touch and audio.

Concept spatial prototype / not a construction drawing

Refine only after official boundary, ownership, existing-building, fire, utility and accessibility data are available.

A bounded garden test, a street-edge co-creation table and a continuous accessible service route. Concept prototypes, not construction drawings.

Zhongzhiyuan | Garden first

Everyday garden, public bypass, fenced test bay, steward point and stop control coexist.

Test safety first

The everyday garden stays larger than the test bay.

AI Origin | One shared table

Problem wall, shared table, making edge and open street edge allow watching, joining or leaving.

Create together

Residents, students and community workers share one table.

Dazhongsi | One service route

A continuous accessible path links arrival, rest and staffed wayfinding with print, touch and audio.

Test convenience

Sit, ask and move accessibly, with help that does not require a phone.

Common baseline: continuous paths, shade, seats, staffed service and clear test boundaries matter more than looking “smart”. Refine after official site, ownership, fire, utility, building and accessibility data.

07 / CIVIC PROOF LINE

Make community problems Jingzhang's most distinctive innovation

Start with a real problem, not a technology showcase; then return a public answer to the city.

CORRIDOR

Along Jingzhang: three public, reviewable urban test places.

BEIJING

Across Beijing: universities, science districts, firms and reviewers collaborate on problems.

REGIONAL + GLOBAL

Regional and global: publish success, failure and exit lessons bilingually for peer exchange.

All partners are proposed roles; no institution is claimed to have committed funding, sites or programmes.

Community problem → small prototype → professional review → bounded trial → publish continue, change or stop.

01

Easier route

Large print, audio, paper and staffed help.

02

Machine courtesy

Bounded area and immediate stop.

03

Issue record

Speak or write; staff confirm the original words.

04

Fraud learning

Public material becomes plain questions.

05

Inclusive meeting

Captions, translation and paper routes.

06

Problem prototype

Resident confirms, team makes, expert reviews.

07

Find a helper

Open conditions; institutions decide.

08

Arrival help

Verified large-print, audio and multilingual routes.

09

Event support

Technology assists; organiser remains responsible.

10

Accurate history

Only registered and reviewed sources.

1 Community asks

Speech, paper or online.

2 Team prototypes

Low cost and reversible.

3 Review

Safety, accessibility, privacy.

4 Bounded trial

Place, time and owner clear.

5 Publish outcome

Continue, change or stop.

MONTHLY

Resident open day

Publish received problems and status.

QUARTERLY

Continue or stop

Check safety, complaints, privacy, use and maintenance.

ANNUALLY

Bilingual urban report

State who benefitted, where it failed and what changes next.

Exit lines: stop immediately after danger, severe leakage or loss of manual control; pause after repeated misinformation, ownerless complaints or unclear data use; expire without real use, maintenance, a lawful site or affordable cost. Refusing data does not remove basic services.
