

● ● ● NEXT STOP: JINGZHANG

Jingzhang Civic Proof Line

One old railway, three new lives.

Turn community problems into a public urban answer: test safety at Zhongzhiyuan, create together at AI Origin, and test everyday convenience at Dazhongsi.

Design impression / not a site photograph, approved building or implementation promise

No one should need to learn AI before using this place

Start with a route, a seat, someone to ask and an answer to feedback. Technology helps quietly.

Signature: the Jingzhang Civic Proof Line — community question, team prototype, independent review, bounded trial, then publish continue, change or stop.

A century scale: resolve, journey, solving together

Red memory stays with verified history; today’ s three nodes do not pretend to be a 1949 route.

One civic-life spine connects three different questions

The map is primary evidence. Real rail, roads, water, parks and stations provide context; design moves remain visibly bounded.

01 / OVERALL SPACE

Next Stop: Jingzhang

One civic-life spine connects three different questions in the real city.

Base map: OpenStreetMap contributors / ODbL, queried 2026-08-11. Design routes are conceptual and pending official data.

ONE OLD RAILWAY THREE NEW LIVES

- **Easier to walk**
Independent ten-minute loops, shade and seats.
- **Easier to learn**
Open classes and places to make things together.
- **Easier to ask**
Large-print wayfinding and a staffed desk.
- **Able to participate**
Speak, write, check progress and ask for

1909 — 1949 — TODAY

Built with resolve / Journey to the capital /
Solve together
All study boundaries are provisional and not official
planning lines.

OpenStreetMap used under ODbL with contributor attribution. Routes and study ranges are conceptual.

Three places, not three identical tech parks

One review frame: resident problem → spatial move → bounded trial → accountable person → stop rule.

03 / THREE FOCUS AREAS

Three places, not three identical tech parks

Resident problem → spatial move → bounded test → accountable person → stop rule.

ZHONGZHIYUAN

Is it safe?

Safety Test Garden

Everyday garden first; a small fenced bay, steward and bypass route.

Stop after collision, alarm, boundary breach or loss of manual control.

Study focus / official boundary pending

AI ORIGIN

Can I take part?

Co-creation Problem Station

Problem wall, shared table, making bench and a staffed window.

Stop if residents did not confirm the problem or risks remain unresolved.

Study focus / official boundary pending

DAZHONGSI

Is life easier?

City Service Living Room

Large-print map, rest seats, tactile route and staffed wayfinding.

Stop after repeated misinformation or false accessibility claims.

Study focus / official boundary pending

The dots show recognisable study locations, not official focus-area boundaries.

Zhongzhiyuan

Test safety first. Collision, alarm, boundary breach or loss of manual control stops the trial.

AI Origin

Create together. No resident confirmation, site consent or resolved risk means no trial.

Dazhongsi

Test convenience. Repeated misinformation or false accessibility claims pause the service.

Plans first show how to move, pause and take responsibility

The three places are not one pavilion with different names. Public-space relationships come before architectural form.

Three places need three different spatial characters

Plans and sections first show movement, pause and responsibility; architecture follows official site conditions.

ZHONGZHIYUAN / Safety Test Garden

The garden stays primary. A small test bay, public bypass and stop control coexist.

Concept spatial prototype / not a construction drawing

AI ORIGIN / Co-creation Station

Residents confirm the problem first. A shared table links discussion and making beside an open street edge.

Concept spatial prototype / not a construction drawing

DAZHONGSI / City Service Living Room

A continuous accessible route links arrival to a staffed desk, with large print, touch and audio.

Concept spatial prototype / not a construction drawing

Refine only after official boundary, ownership, existing-building, fire, utility and accessibility data are available.

Concept prototypes, not construction drawings. Refine after official site, ownership, fire, utility, building and accessibility data.

Test inside a garden

Everyday garden, bypass and bounded trial coexist.

One table by the street

Problem wall, discussion, making and open edge connect.

One continuous service route

Arrival, tactile guidance, rest and staffed help are linked.

Remember three daily experiences before the system behind them

The scenes express experience, not existing conditions, approved buildings or construction results.

Test safety first

The everyday garden stays larger than the test bay.

Create together

Residents, students and community workers share one table.

Test convenience

Sit, ask and move accessibly.

Common baseline: complete use without a phone; no face recognition as a condition of entry or participation; human review and an opt-out route remain available.

Each section must be clear, restful and staffed

Ring-road crossings, bridges, tunnels and station works remain questions, not completed facts.

04 / WALKING + BLUE-GREEN

Walkable in sections, not only end to end

Each section must offer a clear route, a seat and a person to ask before major construction is discussed.

A TEN-MINUTE LOOP

- 1 Enter**
A clear sign from the community or station.
- 2 Pause**
Shade, a seat and barrier-free information.
- 3 Remember**
One verified piece of railway history.
- 4 Ask**
A staffed service point, not only a QR code.
- 5 Return**
Back to the starting point without a forced long walk.

Road, rail, river and park conditions are public background. Crossings, bridges and station works remain pending professional study.

Repair direction, rest, accessibility and east-west links first.

02 / THREE SCALES

From regional collaboration to daily life

Real problems move from the community to testing, review and a public answer.

HOW THE SCALES CONNECT

- 43.6 km² coordinated study**
Universities, firms and public-interest reviewers help solve real civic problems.
- about 11.4 km² overall design**
Heritage, shade, walking and staffed service become one readable spine.
- three focus areas**
Each place tests one clear resident question first.

HONEST BLANK SPACE

Without official zoning, no research, commercial or housing parcels are invented. Uses remain pending official data; public-space intent is shown through the spine and three nodes.

Dashed: provisional study boundary. Gold: conceptual walking links and public nodes. Green: conceptual green spine.

Do not invent research, commercial or housing zoning without official data.

Enter

See direction from a community or station.

Pause

Find shade, a seat and accessibility information.

Remember

Learn one verified railway story.

Return

Go back without a forced long walk.

AI stays backstage while five everyday things improve

Fixed maps, paper, staffed explanation and volunteer support remain complete alternatives.

01

An easier route today

Verified accessibility, seats and transport become large print, audio and paper routes.

Alternative: fixed map, staffed help

02

Machines learn courtesy

A bounded Zhongzhiyuan trial tests slowing, stopping and yielding with immediate stop control.

Alternative: ordinary rest garden

03

Speak or write a park problem

Speech, paper and online routes are checked by staff against the resident’ s words.

Alternative: staffed register

04

Neighbourhood fraud learning

Public materials become questions older adults, children and residents can understand.

Alternative: teacher and booklet

05

Inclusive neighbourhood meeting

Captions, translation and paper support different languages and disabilities.

Alternative: interpreter and writing board

Bring residents’ words into design and keep history accurate

Three industry trials are not approvals. Boundary breach, failed manual control or concentrated opposition stops them.

06

Prototype a daily problem

Resident confirms, team makes cheaply, professional reviewer checks.

Alternative: workshop and cardboard

07

Help for public-interest ideas

Open conditions support initial matching; sites, mentors and institutions decide.

Alternative: directory, phone, open day

08

Less wandering after arrival

Verified routes become large-print, audio and multilingual wayfinding.

Alternative: fixed signs, paper, staff

09

Help at an event

Captions and audio assist; organisers remain responsible for order and access.

Alternative: host and volunteer

10

Accurate railway history

Only registered and human-reviewed sources; no entertainment or route mixing.

Alternative: panel, guide and educator

Make community problems Jingzhang’s distinctive innovation resource

Do not recruit technology first and search for a scenario later. Start with a real problem and publish success, failure and stopping.

07 / CIVIC PROOF LINE

Make community problems Jingzhang's most distinctive innco

Start with a real problem, not a technology showcase; then return a public answer to the city.

CORRIDOR

Along Jingzhang: three public, reviewable urban test places.

BEIJING

Across Beijing: universities, science districts, firms and reviewers collaborate on problems.

REGIONAL + GLOBAL

Regional and global: publish success, failure and exit lessons bilingually for peer exchange.

All partners are proposed roles; no institution is claimed to have committed funding, sites or programmes.

Corridor

Three publicly reviewable urban test places.

Beijing

Proposed problem collaboration with universities, science districts, firms and independent reviewers.

Regional + global

Publish lessons bilingually for Beijing-Tianjin-Hebei and international exchange.

Every question should receive an answer after the event ends

Residents do not carry technical or safety responsibility. Public promises require a confirmed owner, channel and timescale.

1 Community asks
Speech, paper or online.

2 Team prototypes
Low cost and reversible.

3 Review
Safety, access, privacy.

4 Bounded trial
Place, time and owner clear.

5 Publish outcome
Continue, change or stop.

MONTHLY
Resident open day
Publish problems, status and items still lacking an owner.

QUARTERLY
Continue or stop
Check safety, complaints, privacy, accessibility, use and maintenance.

ANNUALLY
Bilingual urban report
State who benefited, where it failed and what changes next.

Investment	First actions	Gate to the next step
Low usable now	Signs, seats, staffed service, paper, minimum trials	Owner, notice, manual takeover and stop rule
Medium repair gaps	Shade, accessibility, pavilions, local walking	Real use, maintenance and lawful site
High later detail	Bridges, station integration, permanent buildings	Official site, zoning, ownership, heritage, transport and funding approval

Exit: stop after danger or severe leakage; pause after repeated misinformation or ownerless complaints; expire without real use, maintenance or affordable cost.

Make facts, proposals and unknowns visible on the page

Automated checks establish consistency, not design merit or selection.

Source → spatial record → recalculate → human review → public answer.
