

The Dao Belt • Twin-Track Quest | Overview

Heritage rail × data light-track | one rail • three halls • two wings • one question

Data: geometry/*.geojson | Metrics: metrics.json | Conceptual; provisional boundary, recompute when official polygons arrive

Land-Use Structure | The quest translated into land

Six land-use zones + twin-track green axis + three hall slots (concept)

蓝 AI

绿 ()

黄 •

红 •

粉

紫 •

Land codes per MNR classification (conceptual); retention/renovation conclusions pending official regulatory planning

Three Halls | Detailed design brief

Origin (autonomy & provability) | Convergence (open-source & talent) | Frontier (economy & global)

North • Origin Hall: autonomy & the provability of the Dao Belt
Concept • pending official polygon

Middle • Convergence Yard: open-source & talent
Concept • pending official polygon

South • Frontier Gate: economy & global
Concept • pending official polygon

Mobility • Slow-traffic • Blue-Green | Twin-track network

Heritage + data tracks • three plazas • slow ring • one AI-dark contrast segment

- ▣▣/▣▣▣▣
- ▣▣•▣▣▣▣▣▣▣▣
- ▣▣/▣▣
- ▣▣▣▣

Road redlines, rail alignments and engineering conclusions are conceptual; pending official road & municipal data

Core Metrics Recalculation | Evidence chain (+ compute-bill transparency)

Area/ratio/layer metrics recomputable; regulatory metrics unknown; compute bills shown per block

Differentiation: compute bills shown per block/period like utilities | one AI-dark segment as baseline

Origin Hall @ Zhongzhiyuan: full-stack autonomy & provability governance. The Provability Table (PSR) registers each AI scenario with model card + reproduction fingerprint + cleared-data list; neighbors check it like price tags.

Convergence Yard @ AI Origin Community + Wudaokou: open-source & talent. The Oral-History Pickup Stand (CVM) archives engineers' and residents' oral histories as vector index, three-chamber reviewed.

Frontier Gate @ Dazhongsi: intelligent economy & global comms. Dazhongsi 4-quadrant walkability + Quest Gate: a wall that holds one open question a year instead of a monument; the public asks, developers prototype.

Each hall splits into 3 conceptual parcels (YD-A01..03 / JC-A01..03 / DC-A01..03) with actions, gaps, measurement metrics, and forbidden claims.

JZ-01 Heritage-park walking-gap stitching & twin-track nodes (public space/transport)
JZ-02 Origin Hall Qinghe innovation interface & provability table (blue-green/governance)
JZ-03 Convergence Yard campus-facing transformation street & oral-history stand (renewal/open-source)
JZ-04 Frontier Gate Dazhongsi 4-quadrant walkability & Quest Gate (transit integration/reverse landmark)
JZ-05 Light-track demo installation & Track-Light public-compute point (new infrastructure)
JZ-06 Dao Week annual route & AI-dark segment (operations/brand/contrast)
10-column governance matrix: responsible role / permits & clearing / resource level / cost range (pre-FS) /
Go-NoGo pilot / 12-month KPI / exit condition / annual review / metric / forbidden claim. Three phases.
