

Ordinary City First; AI enters by spatial depth

01 Site Overview | Evidence First

Ordinary-city reference first; published magnitudes are separated from geometry authority

OSM roads / blue-green / leisure context

provisional site (dashed)

candidate anchor (circle)

Authority split

Official published fact
Overall-design scope ≈11.4 km²;
three named key areas ≈192.1 / 104.3 / 72.0 ha.

Provisional geometry
Site/key polygons support study clipping and relation review only; they are not redlines.

OSM context
2026-08-11 snapshot; incomplete and not proof of official roads, access, or planning class.

Still unknown
Official polygons, controls, buildings; complete official/existing-condition green/public-space inventory; statutory metrics.

study only / not official planning geometry · research reference

Map data © OpenStreetMap contributors · ODbL 1.0 · snapshot 2026-08-11

CORE 01 / AI SPATIAL DEPTH AI SPATIAL DEPTH

The ordinary city works first; AI enters only the depth supported by public exposure, risk, evidence, responsibility, and recovery.

STUDY ONLY / RELATIONAL MODEL / NOT OFFICIAL PLANNING GEOMETRY

D0-D4 + SUPPORT

- The ordinary city works independently; AI is optional, bypassable, stoppable, repairable, replaceable, and removable.
- Research-grade design candidate; not statutory planning, engineering, partnership, approval, or an implementation commitment.

One logic, four invariants, one reversible method

CORE 01 / AI SPATIAL DEPTH

AI SPATIAL DEPTH

The ordinary city works first; AI enters only the depth supported by public exposure, risk, evidence, responsibility, and recovery.

STUDY ONLY / RELATIONAL MODEL / NOT OFFICIAL PLANNING GEOMETRY

D0–D4 + SUPPORT

DESIGN CANDIDATE

- L1: Ordinary City First. L2: ordinary continuity, human takeover, recovery and removal, evidence status.
- L3: Pilot → Measure → Review → Keep / Adjust / Remove → Scale.
- Service / Recovery Support is a transversal back-of-house layer, not D5 and not the endpoint of every path.

Published approximation, research computation, and unknown

01 Site Overview | Evidence First

Ordinary-city reference first; published magnitudes are separated from geometry authority

Metrics, Evidence & Recalculation Status

Three required metrics are known at low confidence; statutory controls and the official boundary remain unknown.

- SITE-001 = 11,412,825.385553982 m² from provisional participant geometry only.
- Green ratio = 0.01835696752571386; Public ratio = 0.016847029839193884. Both are known, low-confidence design-model outputs, not official planning controls.

Six primary + two extended cases; mechanisms only

CORE 05 / CASE TRANSFER

6 PRIMARY + 2 EXTENDED CASES

Transfer mechanisms and cautions—not forms, and not proof of direct implementation in Beijing.

STANDING PUBLIC-PRIVATE-ACADEMIC INTERFACE

ASPERN SEESTADT

DOMAIN LABS COEXIST WITH EVERYDAY DISTRICT LIFE

No case proves site, actor, funding, consent, or transferability.

STUDY ONLY / RELATIONAL MODEL / NOT OFFICIAL PLANNING GEOMETRY

SOURCE-BOUNDED TRANSFER

DESIGN CANDIDATE

- Cases test public edges, controlled validation, human fallback, maintenance, recovery, and accountable exit.
- They do not prove local conditions, partnerships, or implementation commitments.

D0–D4 AI Spatial Depth

CORE 01 / AI SPATIAL DEPTH

AI SPATIAL DEPTH

The ordinary city works first; AI enters only the depth supported by public exposure, risk, evidence, responsibility, and recovery.

STUDY ONLY / RELATIONAL MODEL / NOT OFFICIAL PLANNING GEOMETRY

D0–D4 + SUPPORT

DESIGN CANDIDATE

- D0 Ordinary City; D1 Public Interface; D2 Optional AI; D3 Controlled Work; D4 Professional Validation.
- Software/model, fixed device, and embodied system carry different spatial obligations, not legal risk classes.
- Service / Recovery Support is a transversal back-of-house layer, not D5 and not the endpoint of every path.

Permeability, controlled gradient, ordinary network + branch

CORE 02 / THREE AREA GRAMMARS

THREE AREAS / THREE SPATIAL GRAMMARS

One depth principle produces permeability, controlled gradient, and an ordinary network with an optional branch—not one repeated pipeline.

STUDY ONLY / RELATIONAL MODEL / NOT OFFICIAL PLANNING GEOMETRY

EDGE / THRESHOLD / BRANCH

03 Key Areas | Anchor Conflicts Visible

Provisional rectangles remain; real public-map anchors do not redraw boundaries

AI Origin | Permeability

The Dongsheng OSM anchor falls outside the provisional site/key polygons; retain the conflict pending official polygons and field check.

Zhongzhiyuan | Controlled gradient

No reliable same-name OSM point was found. Xiaoyue River is a neighborhood reference only; it does not locate or bound Zhongzhiyuan.

Dazhongsi | Ordinary network + optional AI

The Dazhongsi station OSM anchor falls outside the provisional Dazhongsi rectangle; the rectangle is not shifted to hide the mismatch.

Mismatch is evidence—not a geometry-edit instruction.

study only / not official planning geometry · research reference

Map data © OpenStreetMap contributors · ODbL 1.0 · snapshot 2026-08-11

- AI Origin is permeable; Zhongzhiyuan opens at the edge and controls the interior; Dazhongsi keeps ordinary commerce, culture, and transit primary.
- AI-free ordinary access is retained within areas and along drawn segments; three cross-component links are CONNECTIVITY_EVIDENCE_BLOCKED, so belt-wide continuity is not proven.

Seven user/worker groups + one city steward

CORE 04 / PEOPLE + STEWARDSHIP

7 USER / WORKER ROLES + 1 STEWARD

Roles stress-test space, takeover, and exit; they are not surveyed people or demographic forecasts.

STUDY ONLY / RELATIONAL MODEL / NOT OFFICIAL PLANNING GEOMETRY

AFFECTED ROLES ≠ ACCOUNTABLE ROLE

DESIGN CANDIDATE

- Residents, older/disabled people, commuters, students/researchers, visitors, merchants/service workers, and project teams.
- The steward coordinates takeover, incident recording, recovery, and exit without replacing statutory responsibility.

Eight spatial scenarios from ordinary entry to validation

CORE 03 / SCENARIO SYSTEM

12 SCENARIOS: 8 SPATIAL + 4 SYSTEM

Industrial validation is a layered tag; System scenarios support space rather than masquerading as buildings.

3 INDUSTRIAL VALIDATION TAGS

CORE 07 / OPERATIONS + PORTFOLIO

CITY ENTRY IS NOT AN AUTOMATIC UPGRADE PIPELINE

Every candidate may be kept, adjusted, or removed; Scale requires new evidence and authority.

STUDY ONLY / RELATIONAL MODEL / NOT OFFICIAL PLANNING GEOMETRY

EMPTY TRUTHFUL > POPULATED FALSE

- Software/model: explain and correct. Fixed device: own, service, replace. Embodied system: isolate, stop, take over, recover.
- Testing starts only after responsibility, boundaries, and exit conditions are explicit.

Three primary landmarks + two public components

CORE 06 / LANDMARKS + COMPONENTS

THREE SPATIAL MEMORIES, NOT THREE TECH SPECTACLES

Edge, Threshold, and Branch Court retain ordinary urban value after AI closes.

STUDY ONLY / RELATIONAL MODEL / NOT OFFICIAL PLANNING GEOMETRY

AI-OFF VALUE FIRST

DESIGN CANDIDATE

- Visible Work Edge, Validation Threshold, and Dazhongsi Branch Court express three spatial grammars.
- Human Service Anchor and Heritage Public Interface remain public components, not extra primary landmarks.

Eleven candidates filtered by spatial eligibility

CORE 07 / OPERATIONS + PORTFOLIO

CITY ENTRY IS NOT AN AUTOMATIC UPGRADE PIPELINE

Every candidate may be kept, adjusted, or removed; Scale requires new evidence and authority.

STUDY ONLY / RELATIONAL MODEL / NOT OFFICIAL PLANNING GEOMETRY

SOURCE-BOUNDED TRANSFER

- Primary risk: treating relational diagrams, published approximations, or OSM context as official geometry, engineering, or permission.
- The non-empty phasing contract and helper-layer semantic limit remain disclosed; formal readiness is controlled by the machine-readable manifest and self_check.json, and this figure does not assert approval, selection, or implementation status.
- Human review decides future site precision, candidate selection, landmark expression, and final visual competition.
