

Five layers folded into one imaginable Openline

Left: exploded 5-layer stack (S→N = L→R) • right: corridor axon on real fabric (OSM 2026-08) | provisional

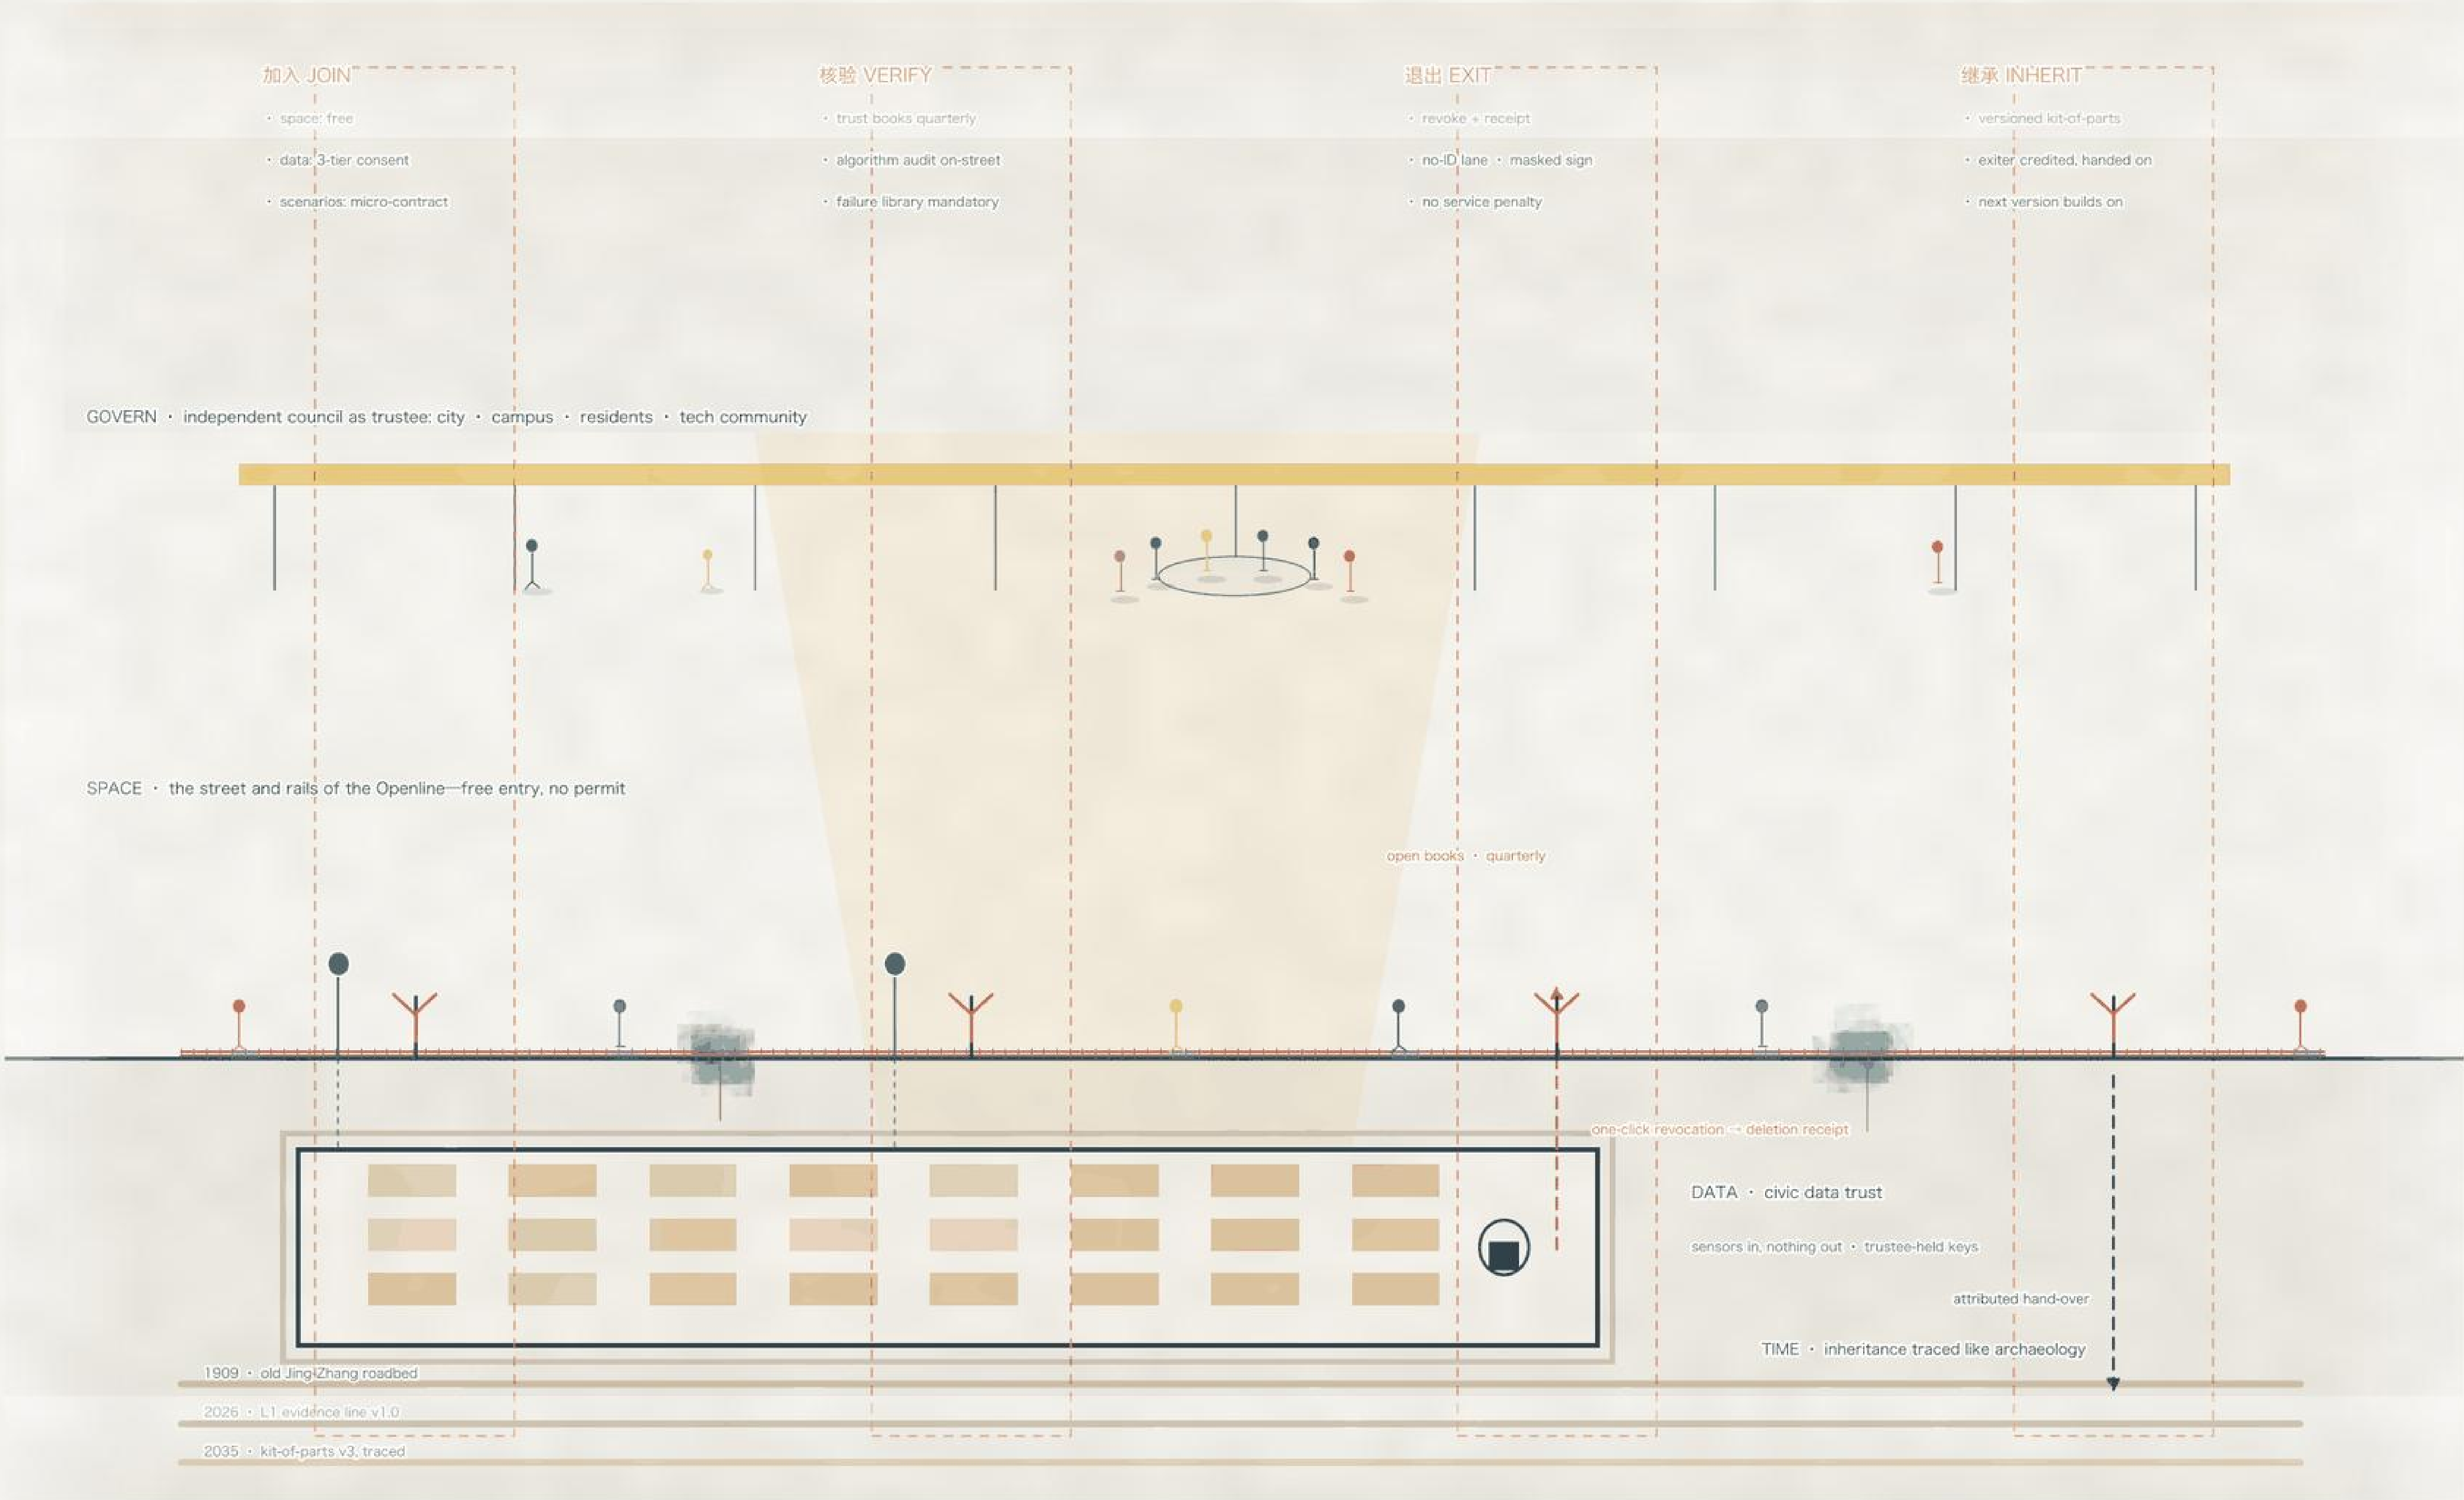

OPENLINE-100 • site-overview • exploded stack + corridor axon • fabric: OSM real basemap • BOARD v1.2

PROVISIONAL boundary • discussion-grade concept • not approval geometry • full recalc on official data

Plate 01 • Site overview: five-layer structure and corridor axonometric
OPENLINE 100 • BOARD SET

Open Ticket institutional section: the fare system of the Openline

The right-of-way rewritten for the digital century | Join • Verify • Exit • Inherit × govern / space / data / time | governance concept

The Openline is the road;
the Ticket is its rule of use.

- 1909: the fight for a Chinese right-of-way
- 2026: the citizen right-of-way, rewritten
- A line without a fare system is engineering;
with one, it becomes a public service

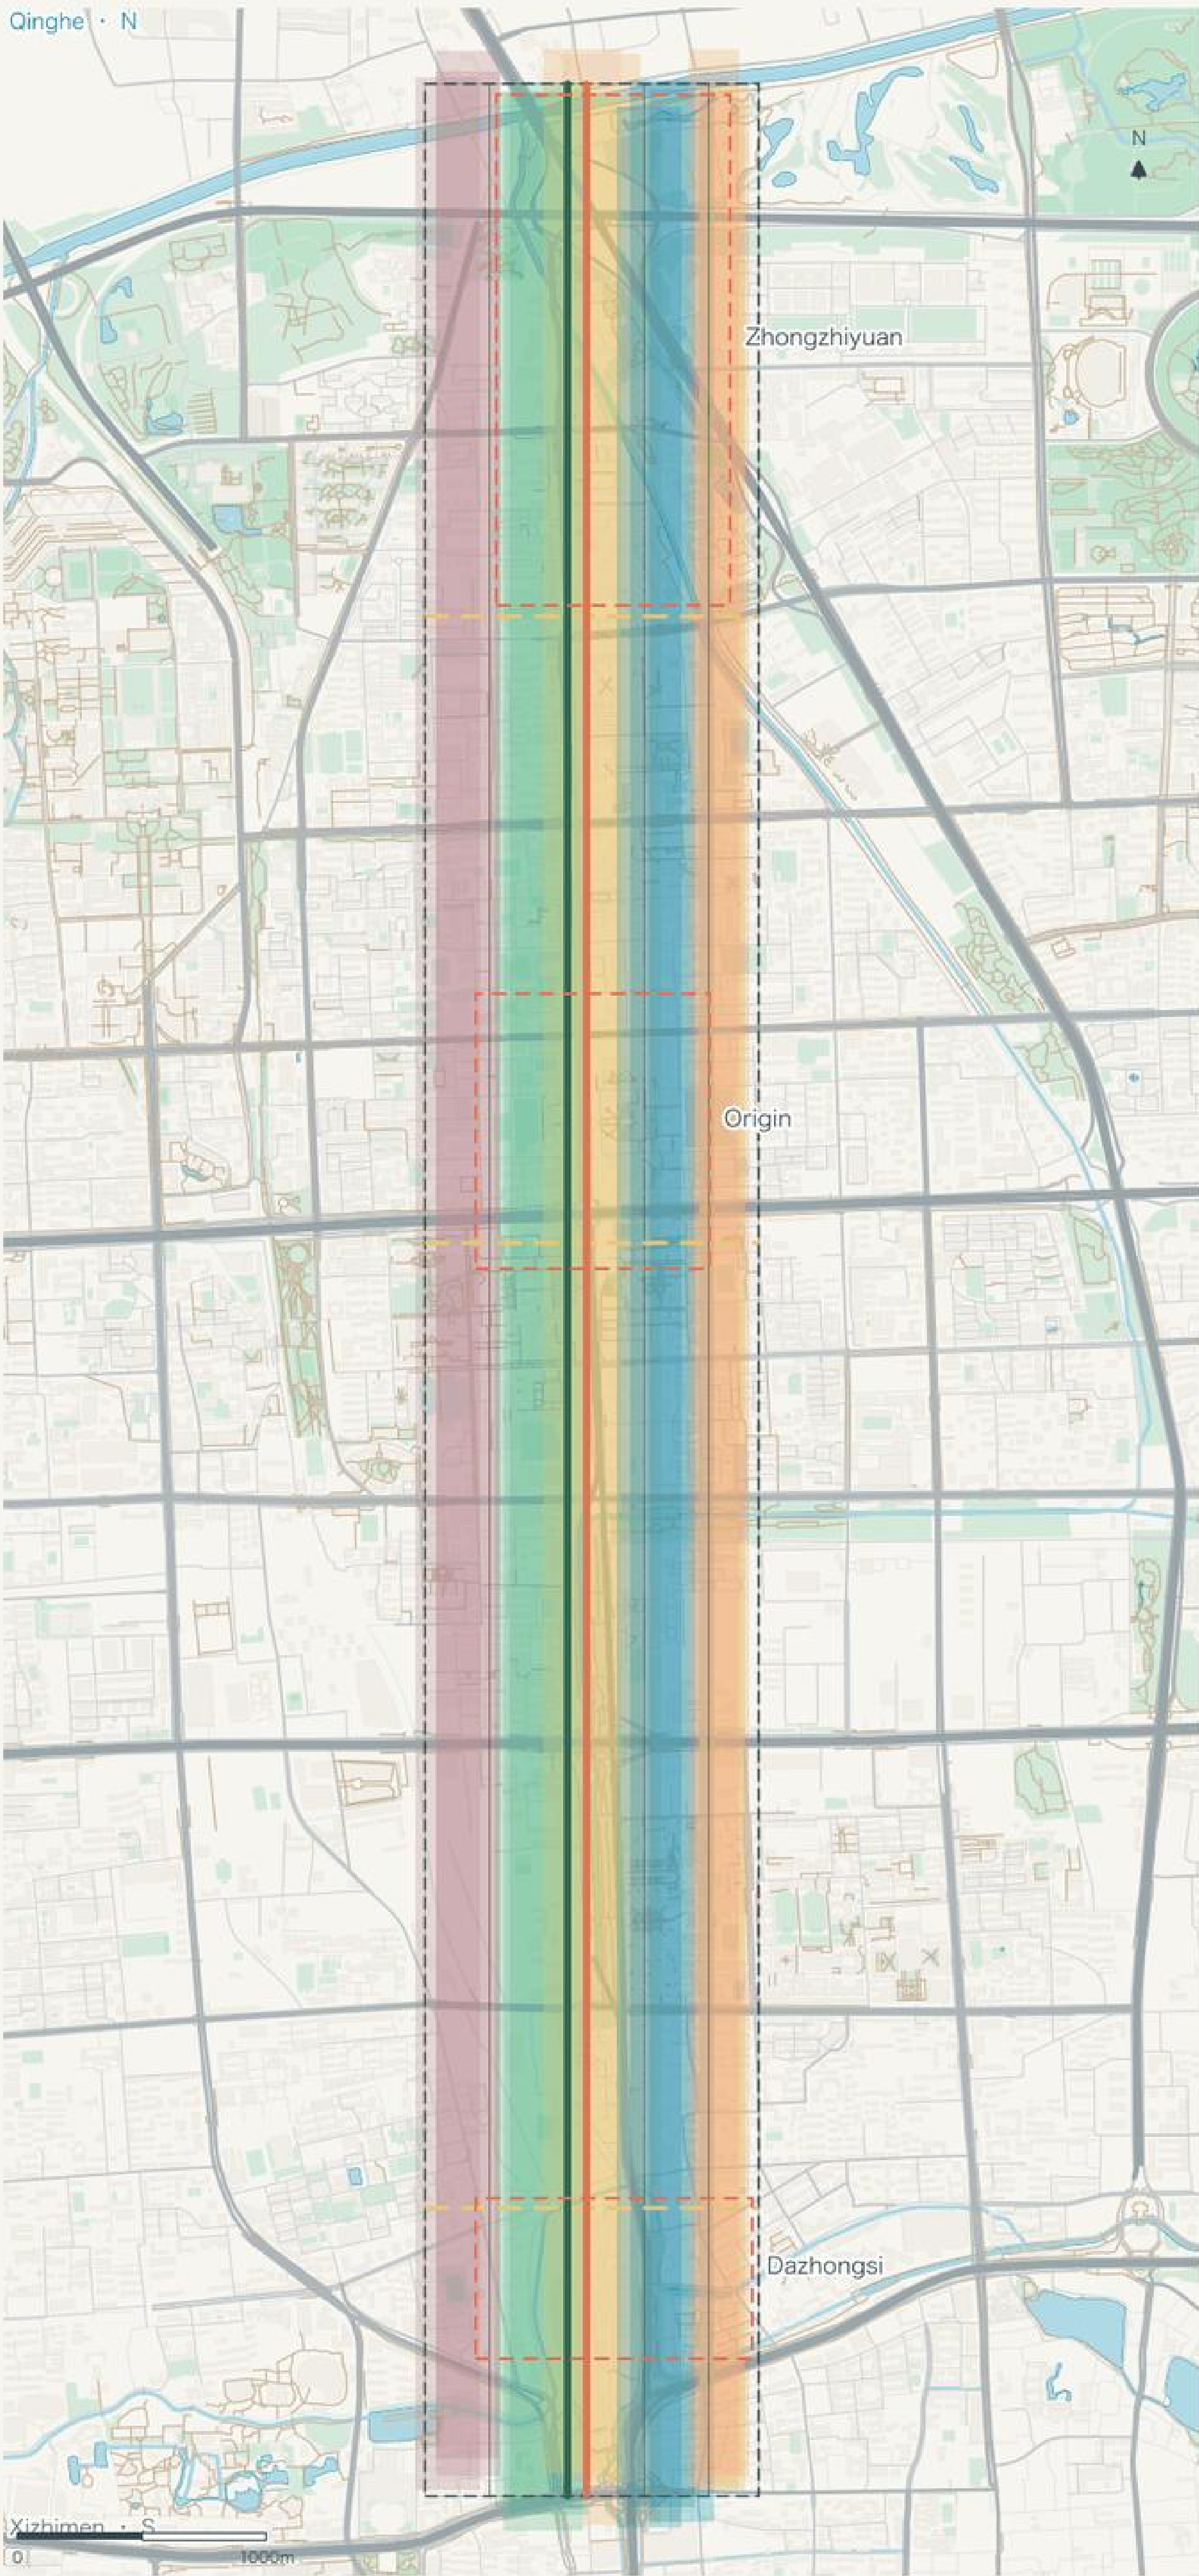

4 strata × 4 gates

govern: trusteeship • space: free
data: locked trust • time: traced

governance concept • not adopted policy
to be co-built with district & data authorities

Land use hung on the Openline: corridor before parcels

Concept catalyst zoning (not statutory) • base = real OSM fabric | areas recalculated in EPSG:4548

Zone	Code	Area ha	Share	Openline role
LU-001 West R&D & collaboration	0802	≈138.3	12.1%	Full-stack R&D • open question
LU-002 Blue-green public spine	1401	≈258.6	22.7%	Heritage park spine • L1/L2
LU-003 Heritage & culture interface	0803	≈220.1	19.3%	Heritage narrative along L1
LU-004 Native street (south)	05	≈297.8	26.1%	Agents / terminals / content
LU-005 East community & living	0702	≈226.5	19.8%	Talent living • transfer

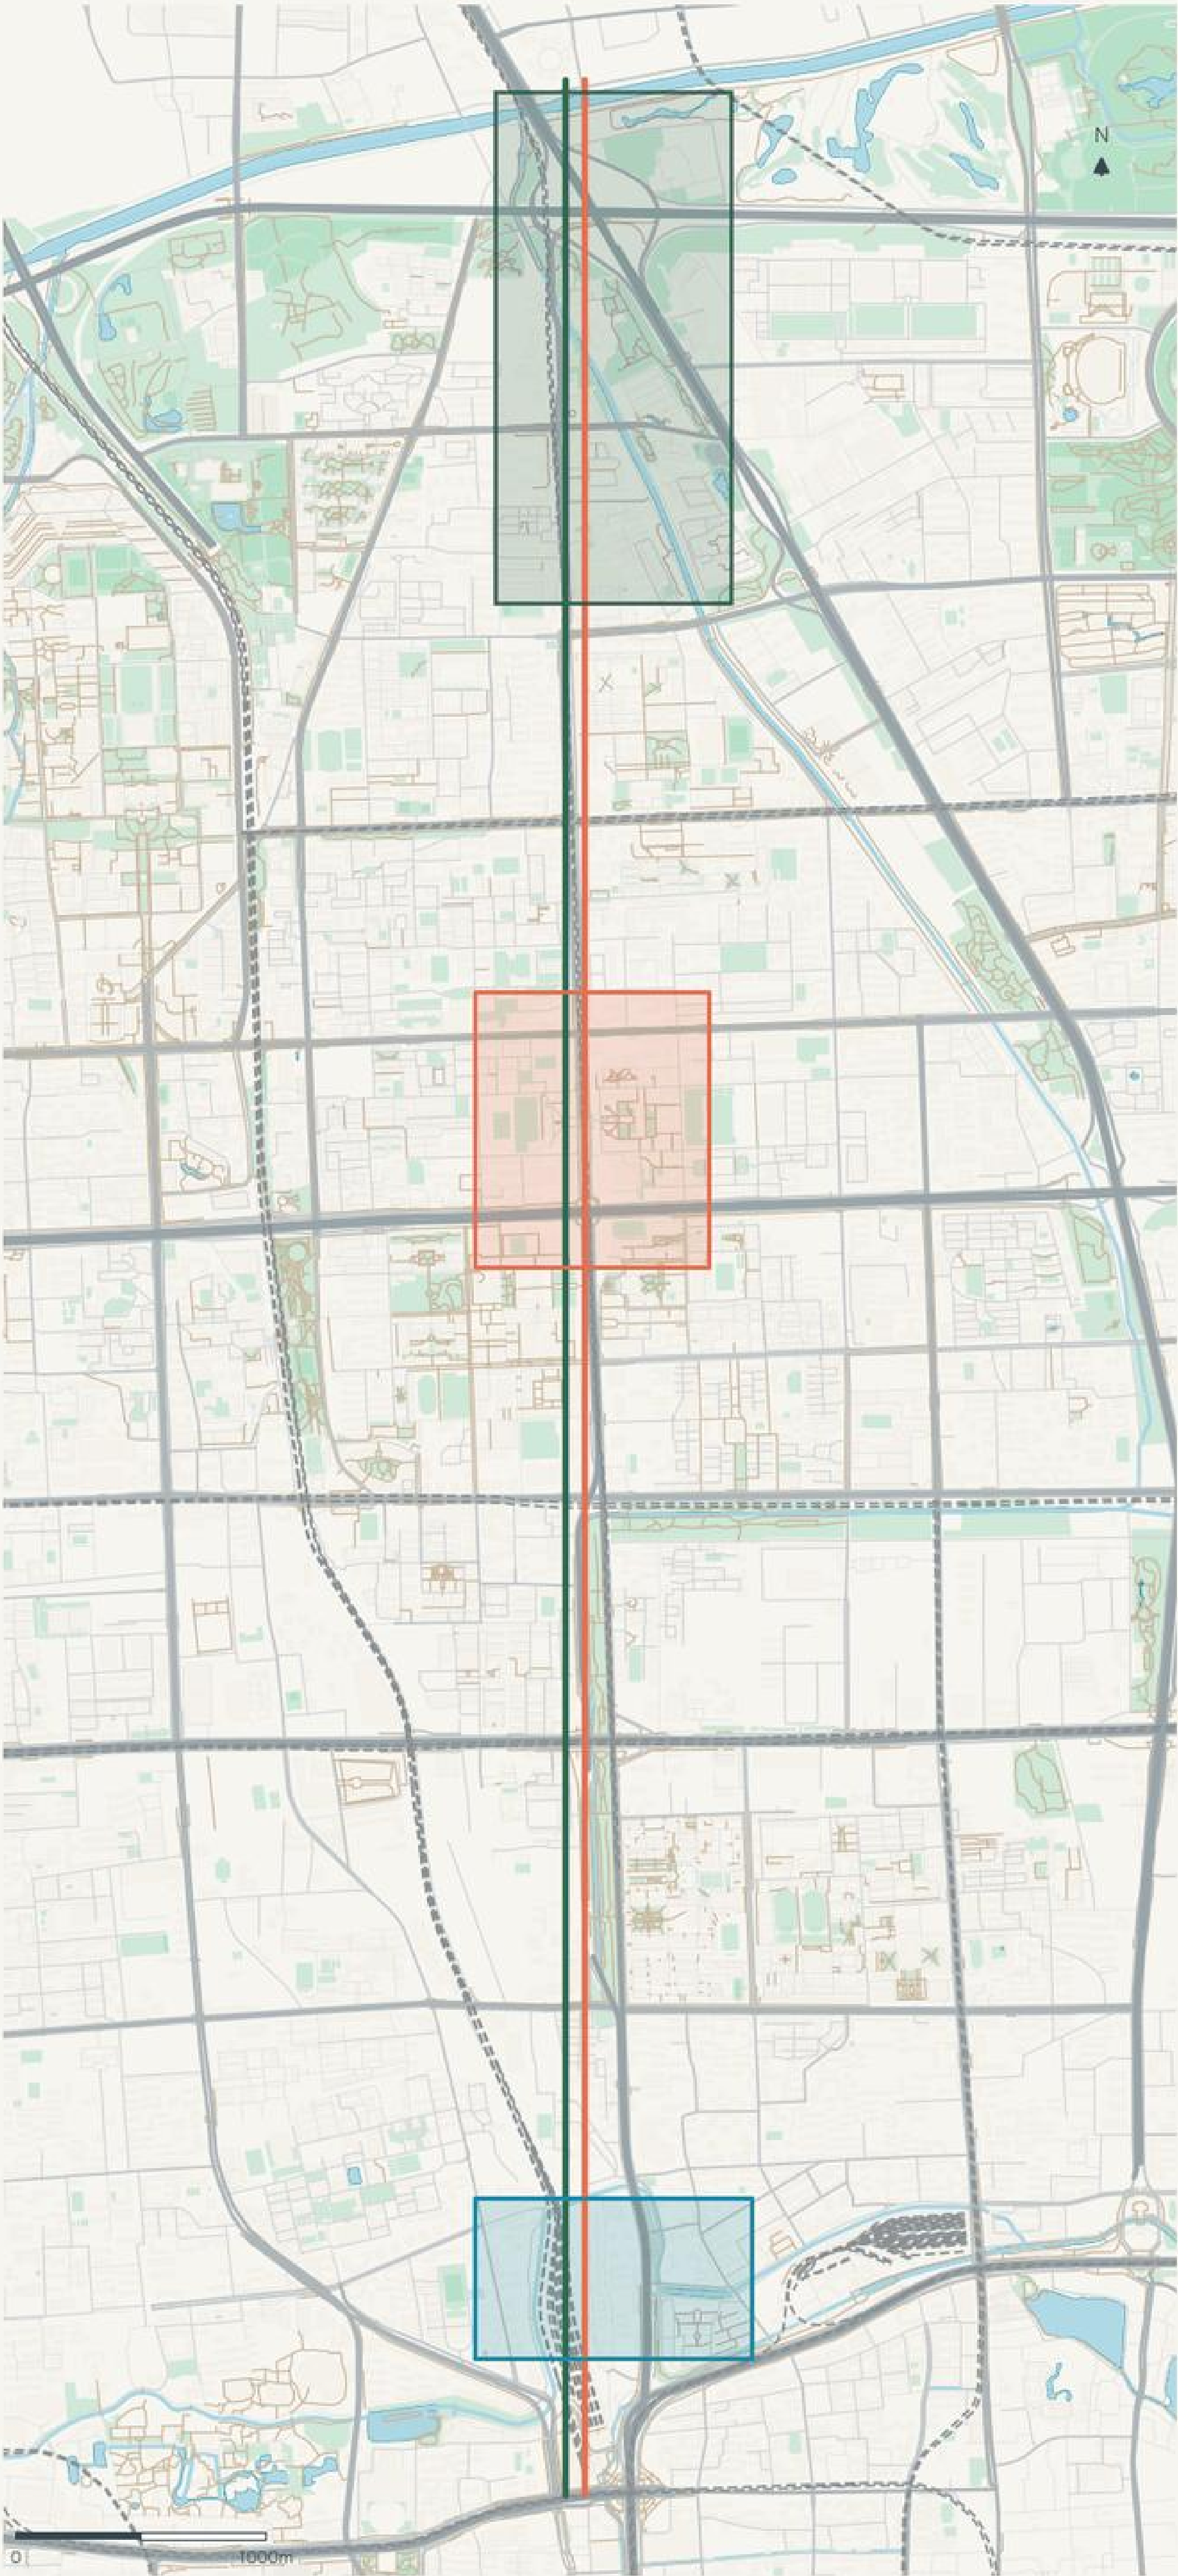

Total ≈1141.3 ha • 100% (closed with submitted boundary, err <0.1%)

Checks

- Concept green ≈227.8 ha (20.0%) • public space ≈90.1 ha (7.9%)
- Concept footprint 482k m² (≈4.2%) = node envelopes, not statutory
- Never mix 1668.2 ha control-plan area with 1141 ha submission
- Full recalculation once official parcels arrive; caps yield to them

Why the three areas are not one park template

One Openline grammar, three institutions / sections / components / scenarios | real OSM fabric

OPENLINE-100 • key-areas • three district products on real fabric • BOARD v1.2

Zhongzhiyuan • Garden Innovation St. ≈192 ha

Upgradeable mainboard: shared base + 5 units + collab street + governance

Status: mandatory key area, outside published block-plan extent

Falsifiable: unstable base = rebuild every generation

Origin • Innovation Source ≈104 ha

Over-the-wall: license window + 8-match + open launch + failure library

Status: one of two centers (Wudaokou)

Falsifiable: no license window = source stays walled

Dazhongsi • The Native Street ≈72 ha

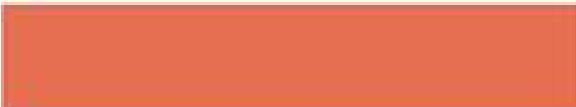

Native Street: ground-floor protocol + 4-quadrant arrival + data salon

Status: one of two centers (Dazhongsi)

Falsifiable: no label = ad corridor

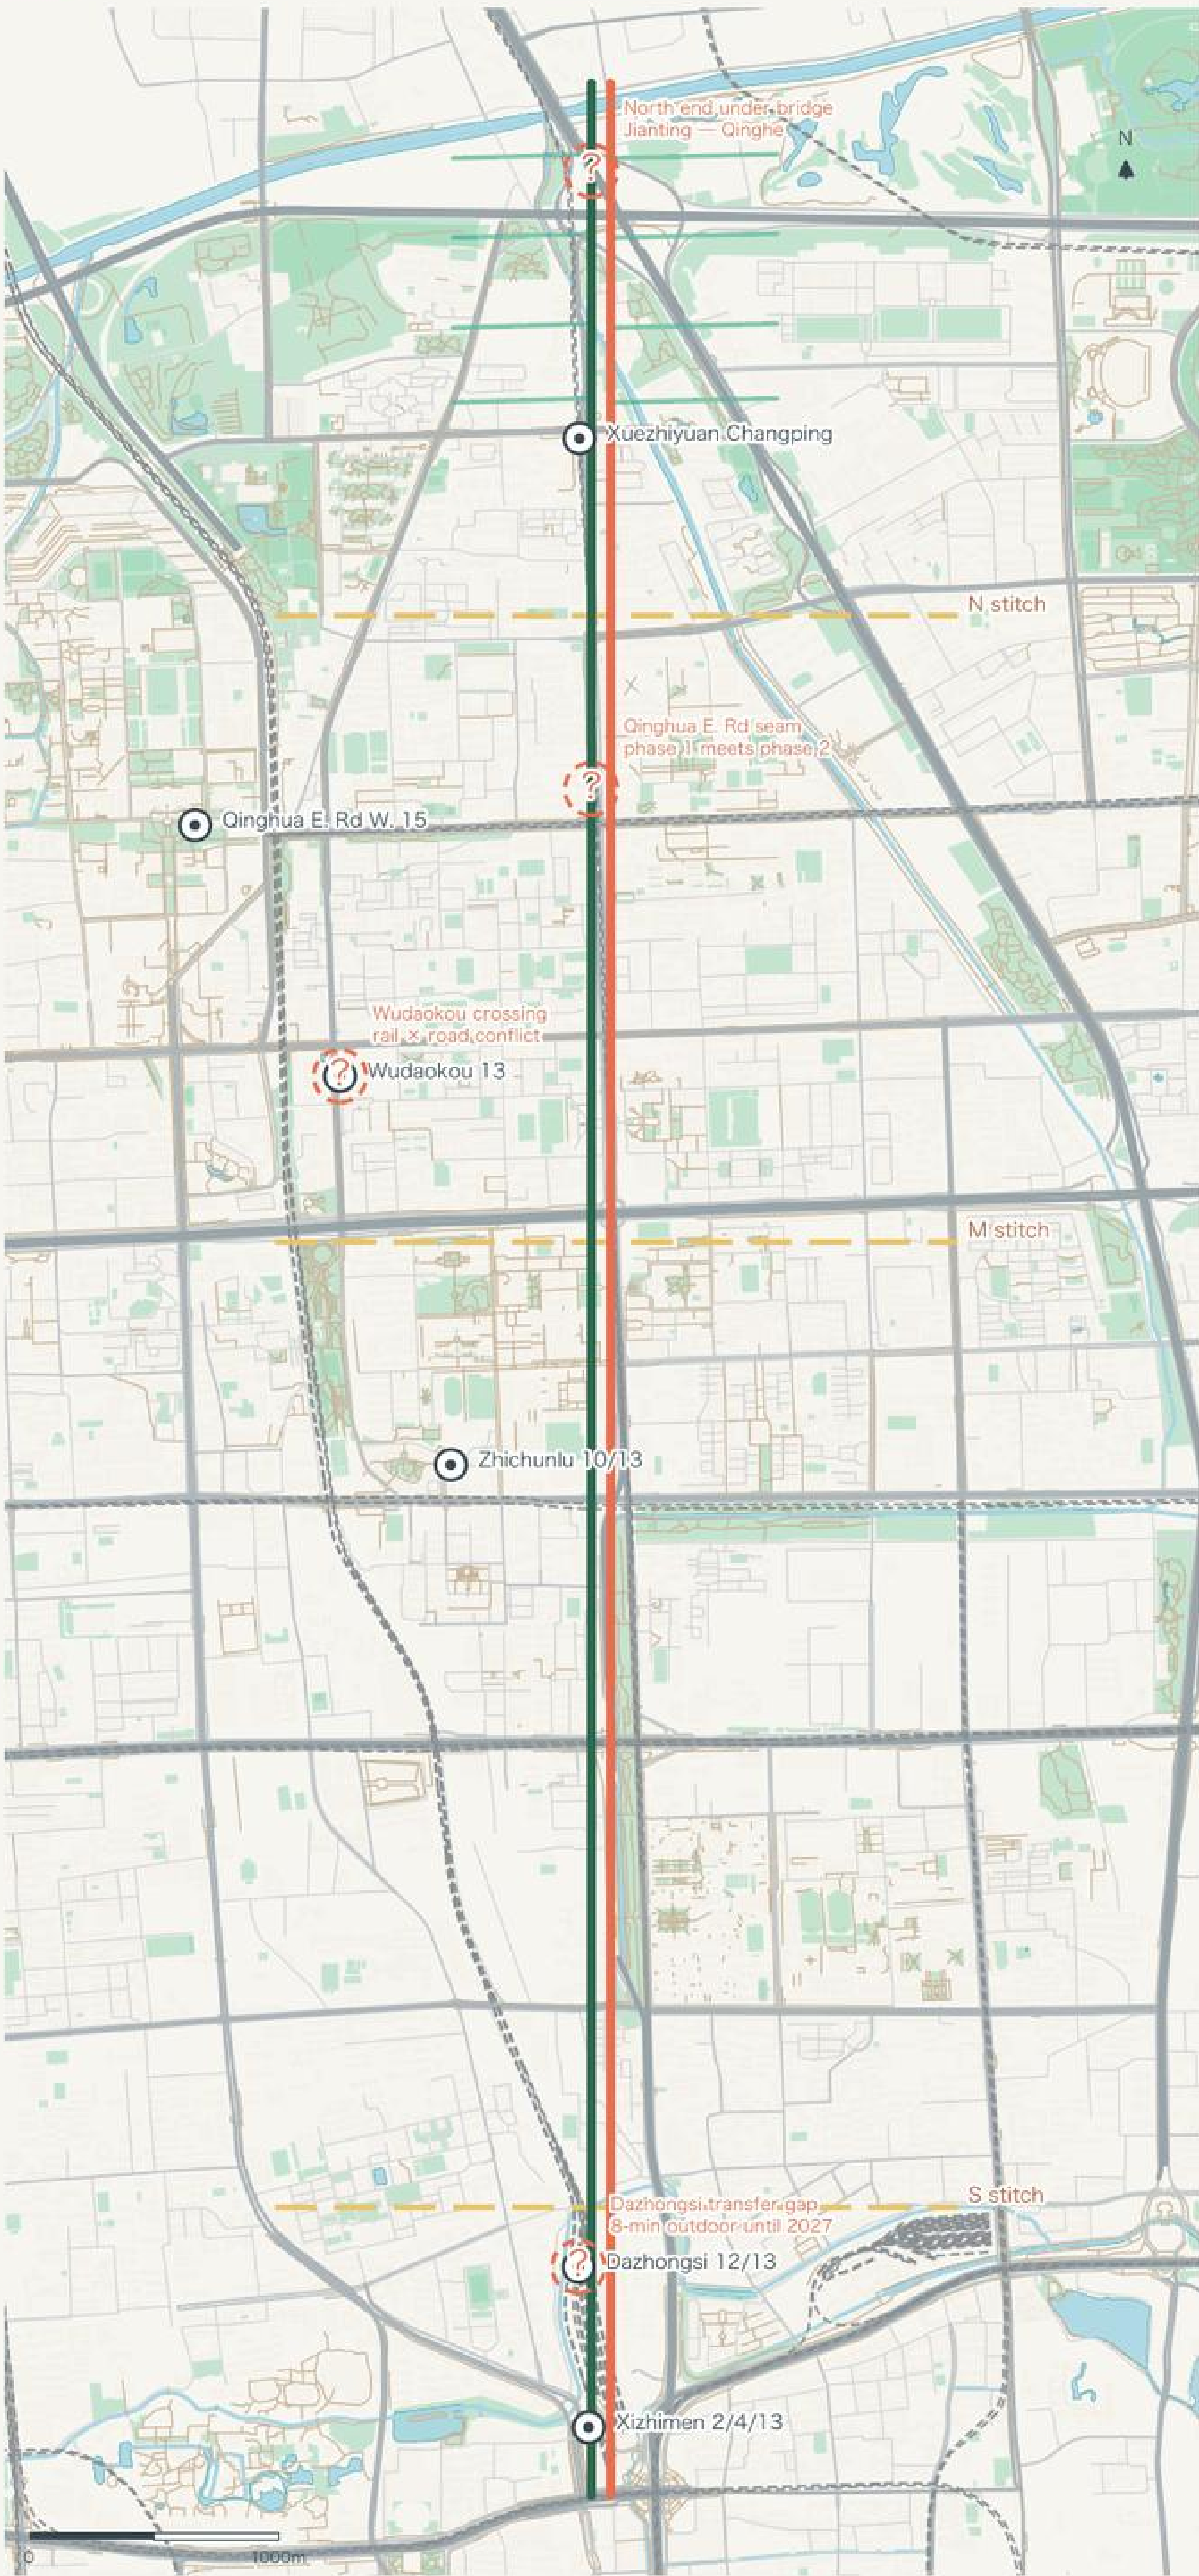

Shared grammar; different institutions, sections, components, scenarios.

Rectangles are not parcel lines — provisional until official polygons.

How people move: N - S through, E - W stitched

Twin-line Openline • 3 stitches • real rail & stations • breakpoints as questions, not fake bridges | OSM

- L1 Fact Line: slow-first, canopy
- L2 Service Line: stations & scenes
- 3 E - W stitches: campus/community
- Built fishbone links (joined, not redrawn)
- Real rail: Lines 13/12/15/Changping
- Blue-green: spine + Qinghe/Xiaoyue
- Breakpoint = research question → OL-01

Section logic (not engineering):

- L1 walk-first, cycling, canopy
- L2 service/emergency OK, slow-first
- Walking ≥50% of section, always
- Stitch junctions: crossing & sightlines first

Concept engineering for the worst gap:

Wudaokou 3-level deck OL-07 (pending)

Ecological commitments in numbers: verifiable targets each phase

Carbon budget • runoff capture • heat island • biodiversity net gain • canopy | sensors to trust, Verify gate publishes | targets per A-ECO-001

A promise with a meter, not a slogan

How measured

L1 sensor poles + surveys

runoff meters • surface temp

material ledger • energy

plots + canopy remote sensing

Who verifies

civic trust: in, not out

licensed trustees open it

Verify gate publishes quarterly

If a target is missed

component library fix release

targets never quietly edited

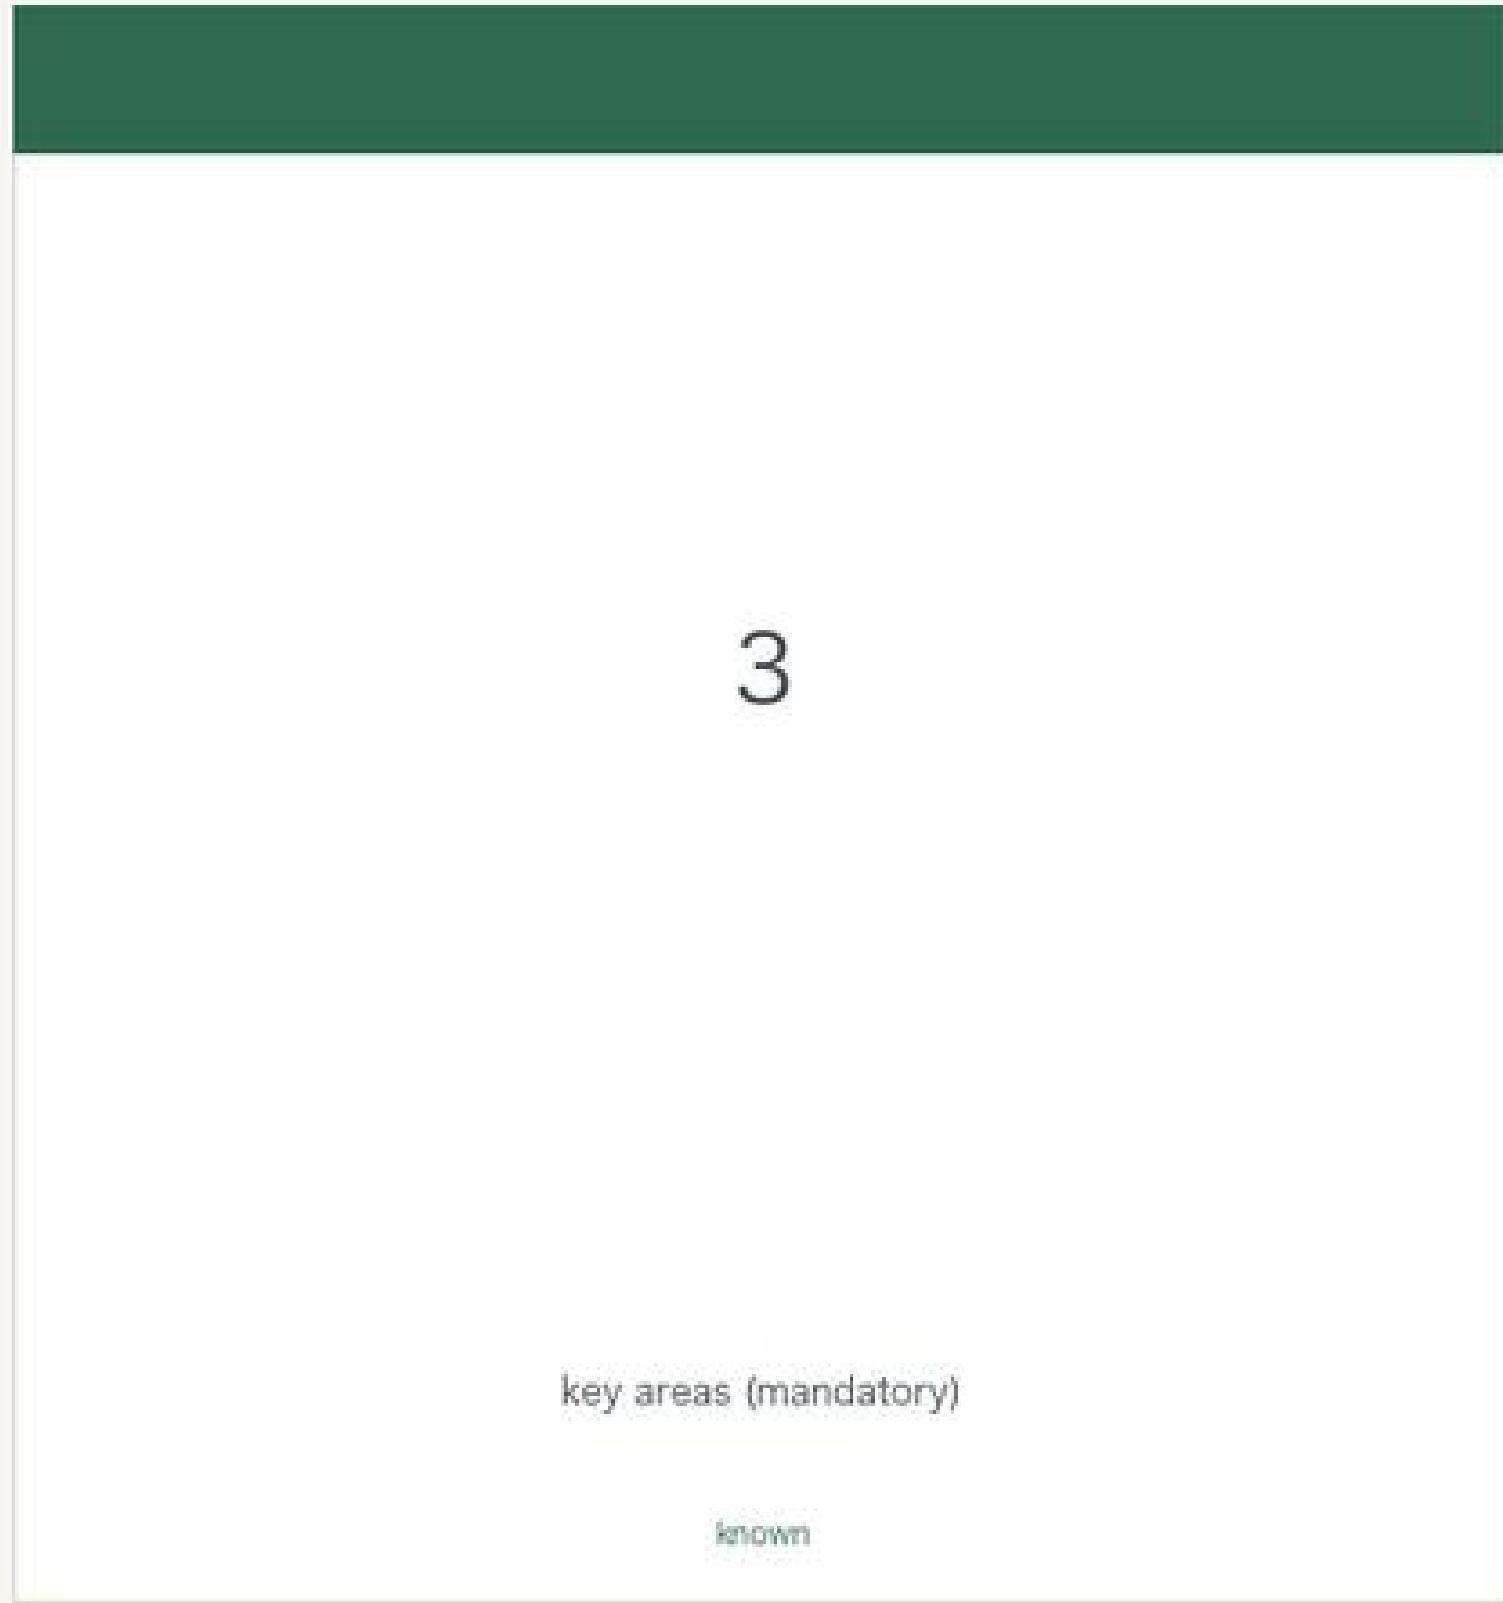

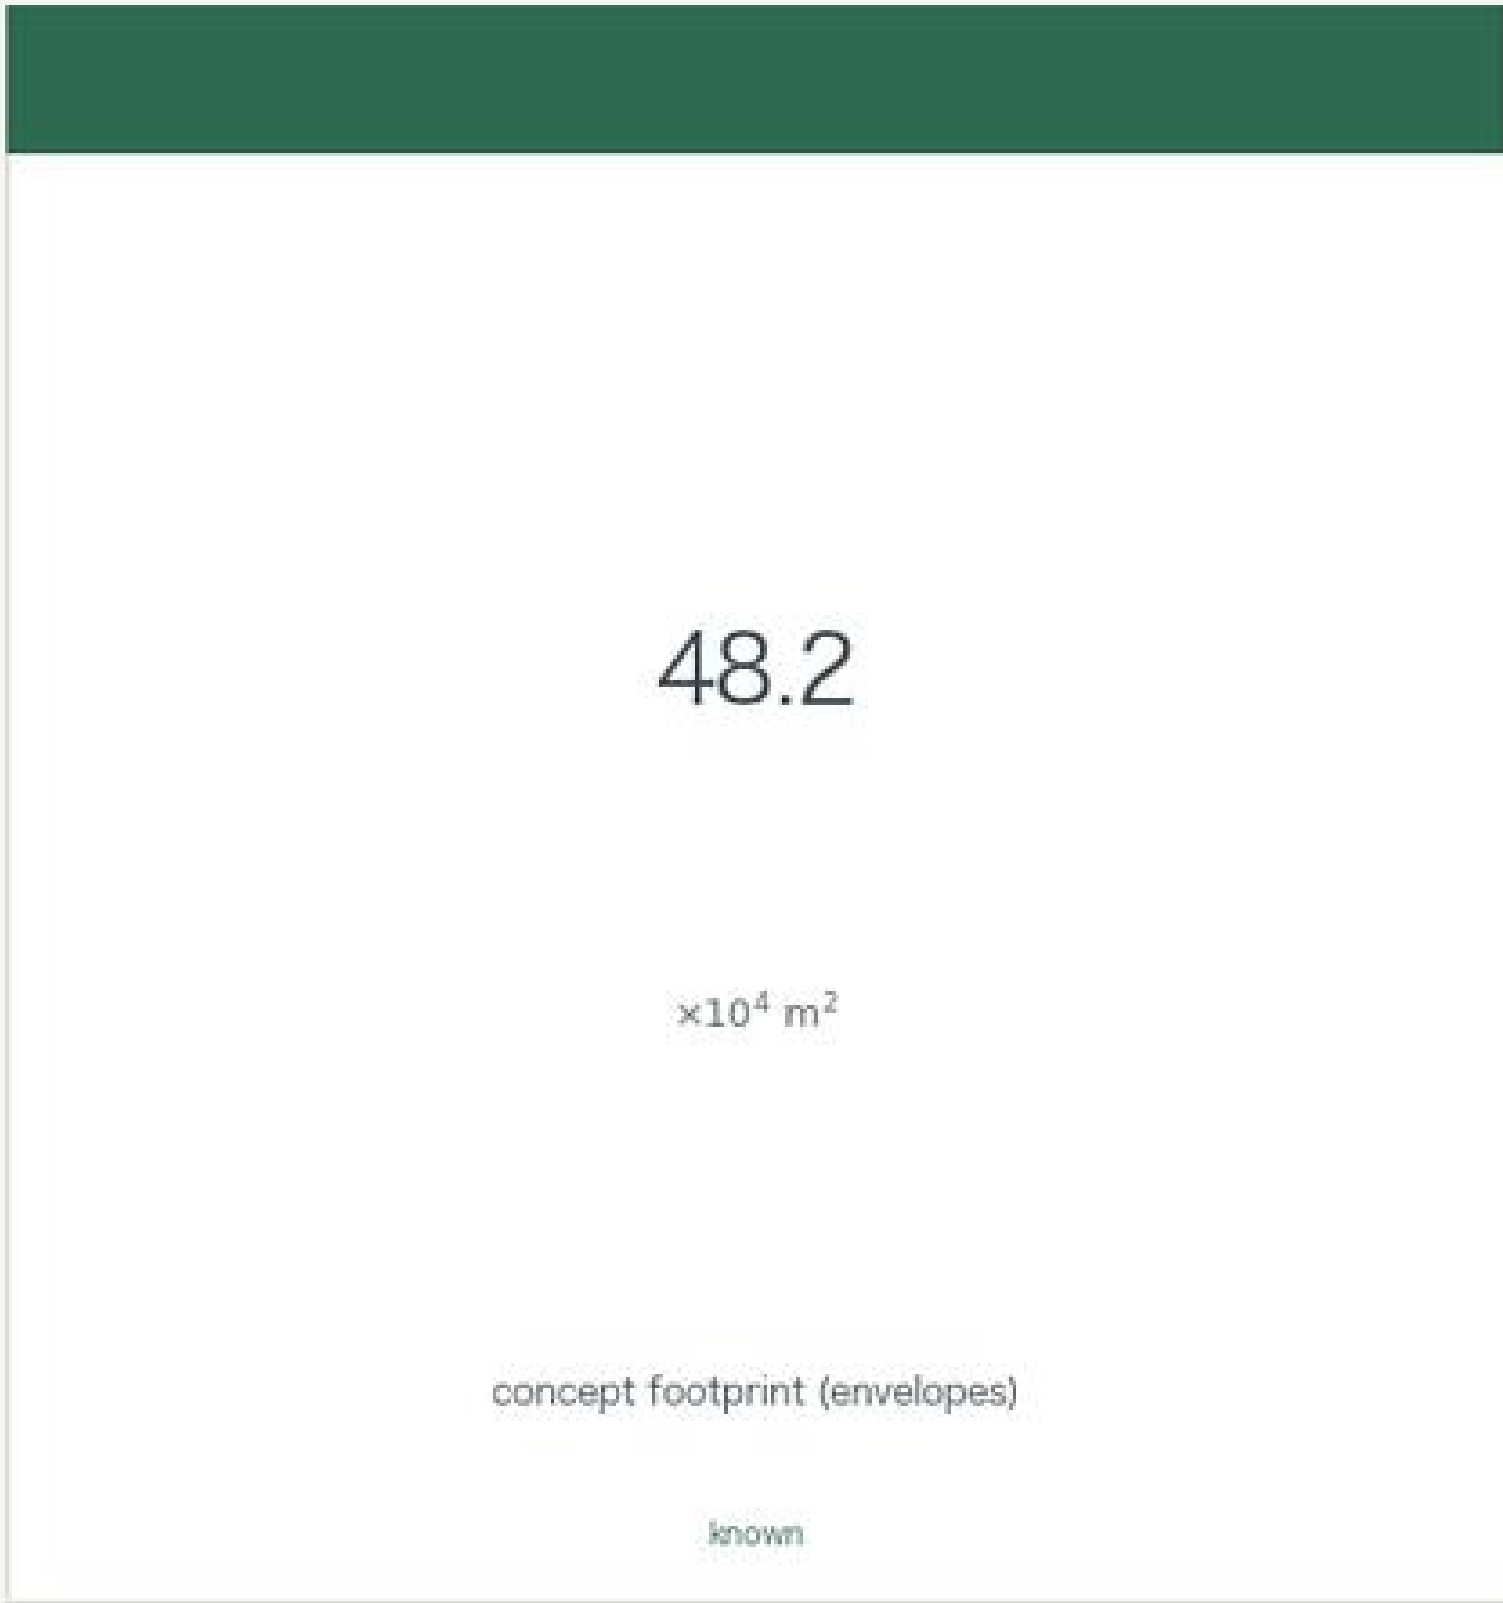

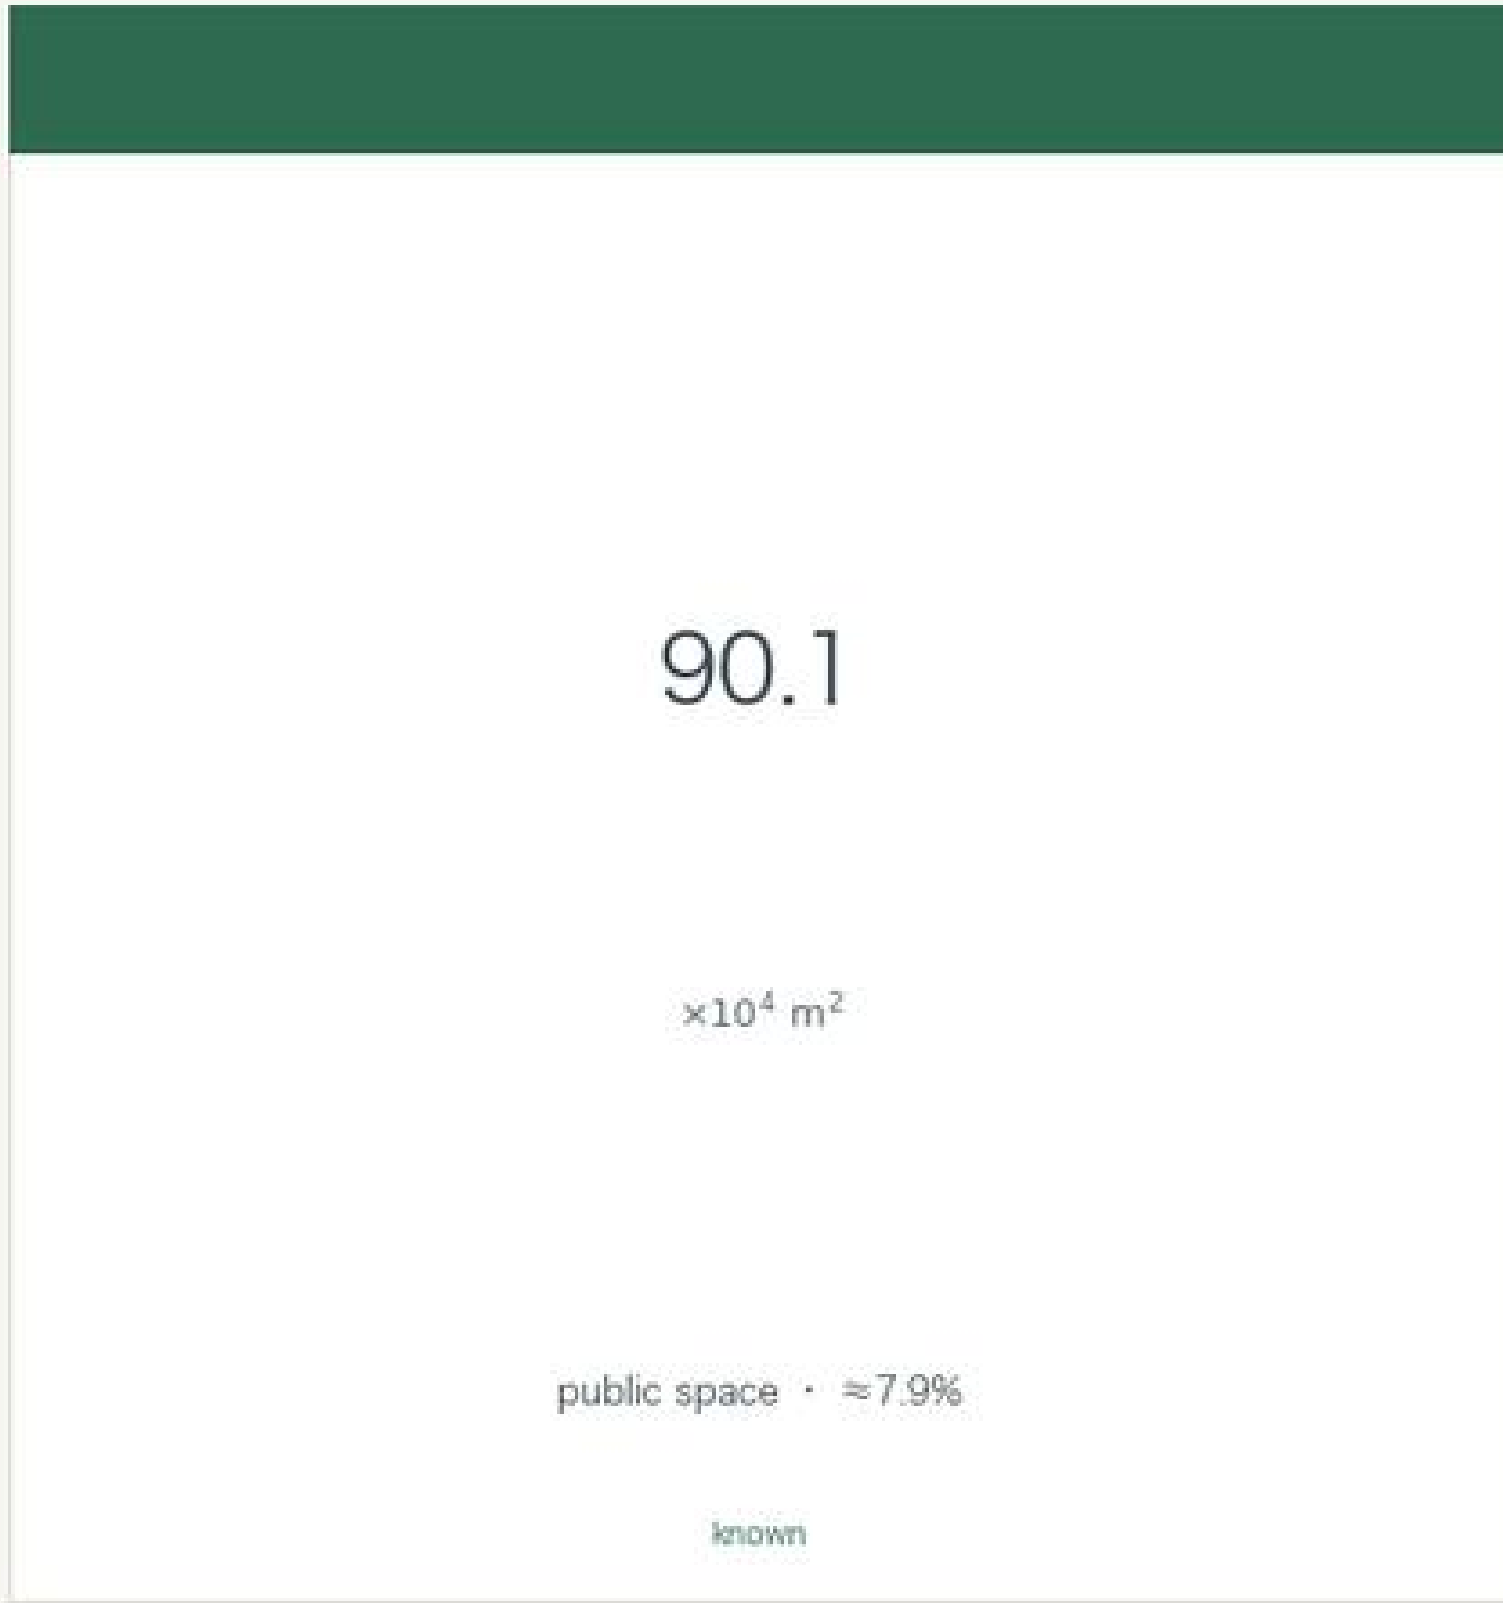

the gap goes on public record

Why we dare commit

- reversible first = cheap trials
- targets from public practice bands
- recalc on official data

What is recalculated, what still awaits official data

Type 1 recalculated (provisional) • Type 2 structure known / intensity unknown • Type 3 performance in assumptions

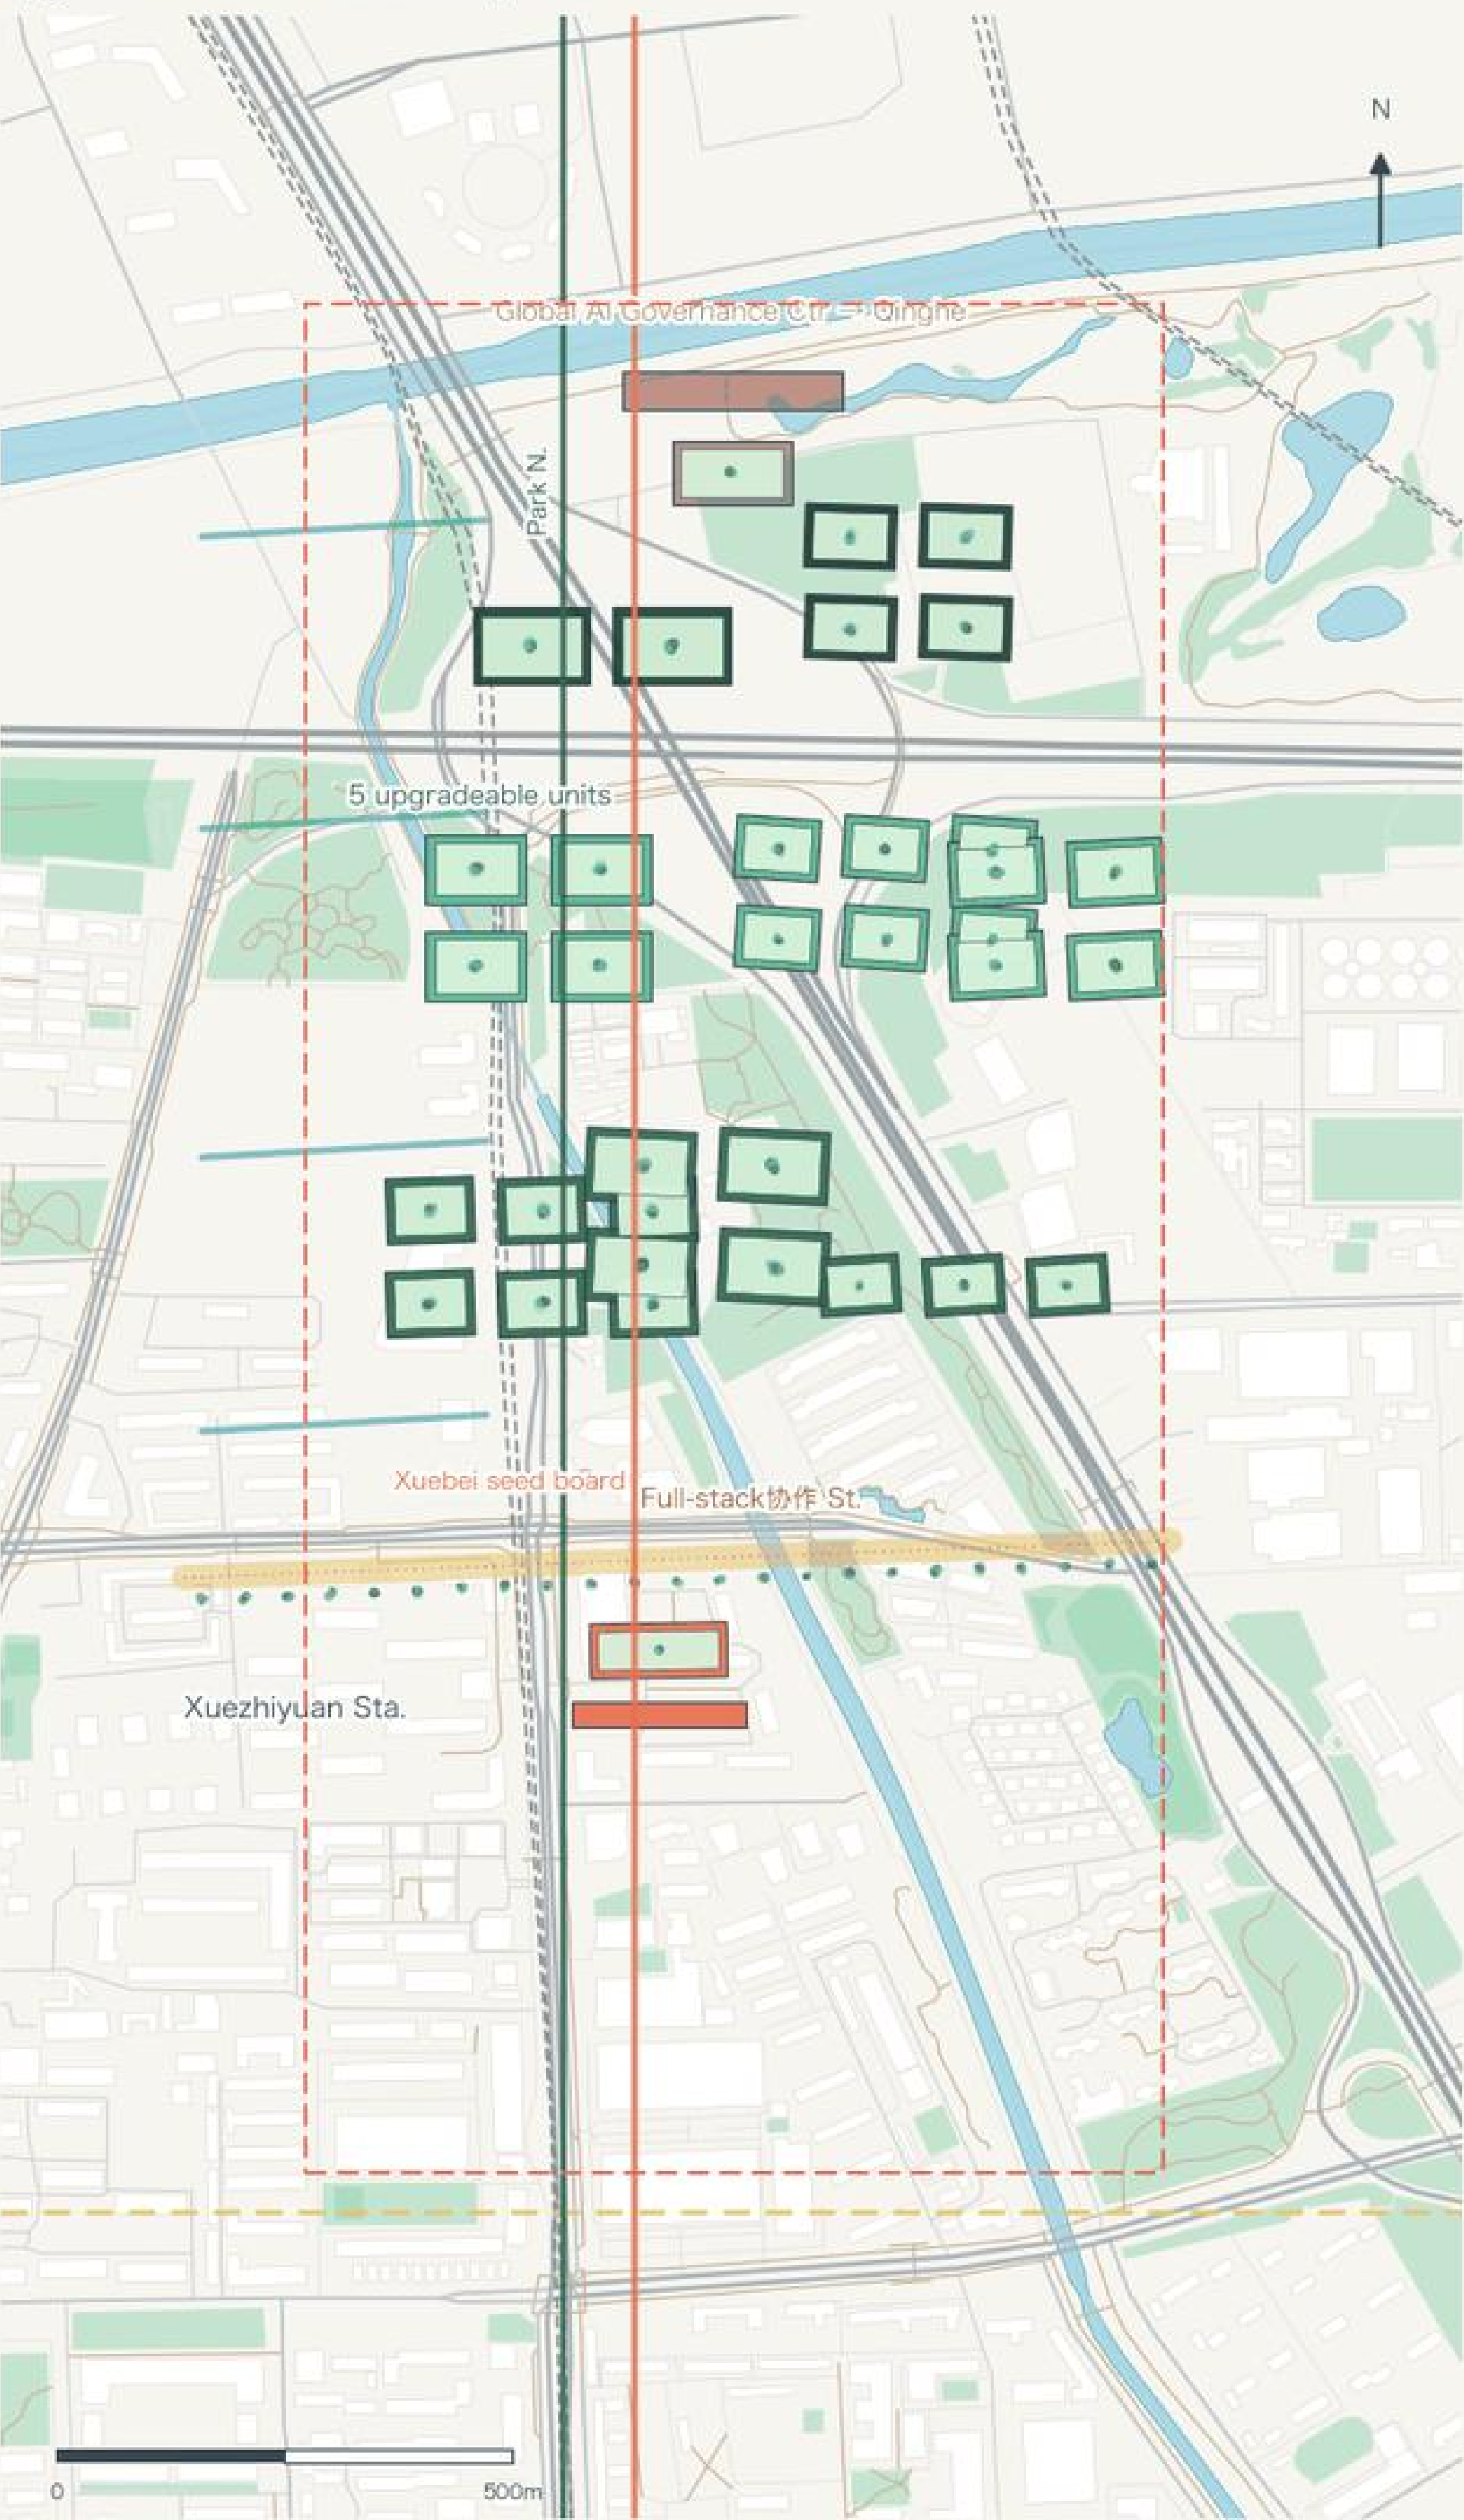

Honesty

- Never mix 1668.2 ha control area with 1141 ha submission
- 2026-08-11 approval triggers text alignment, not re-geometry
- Official parcels → full package recalculation

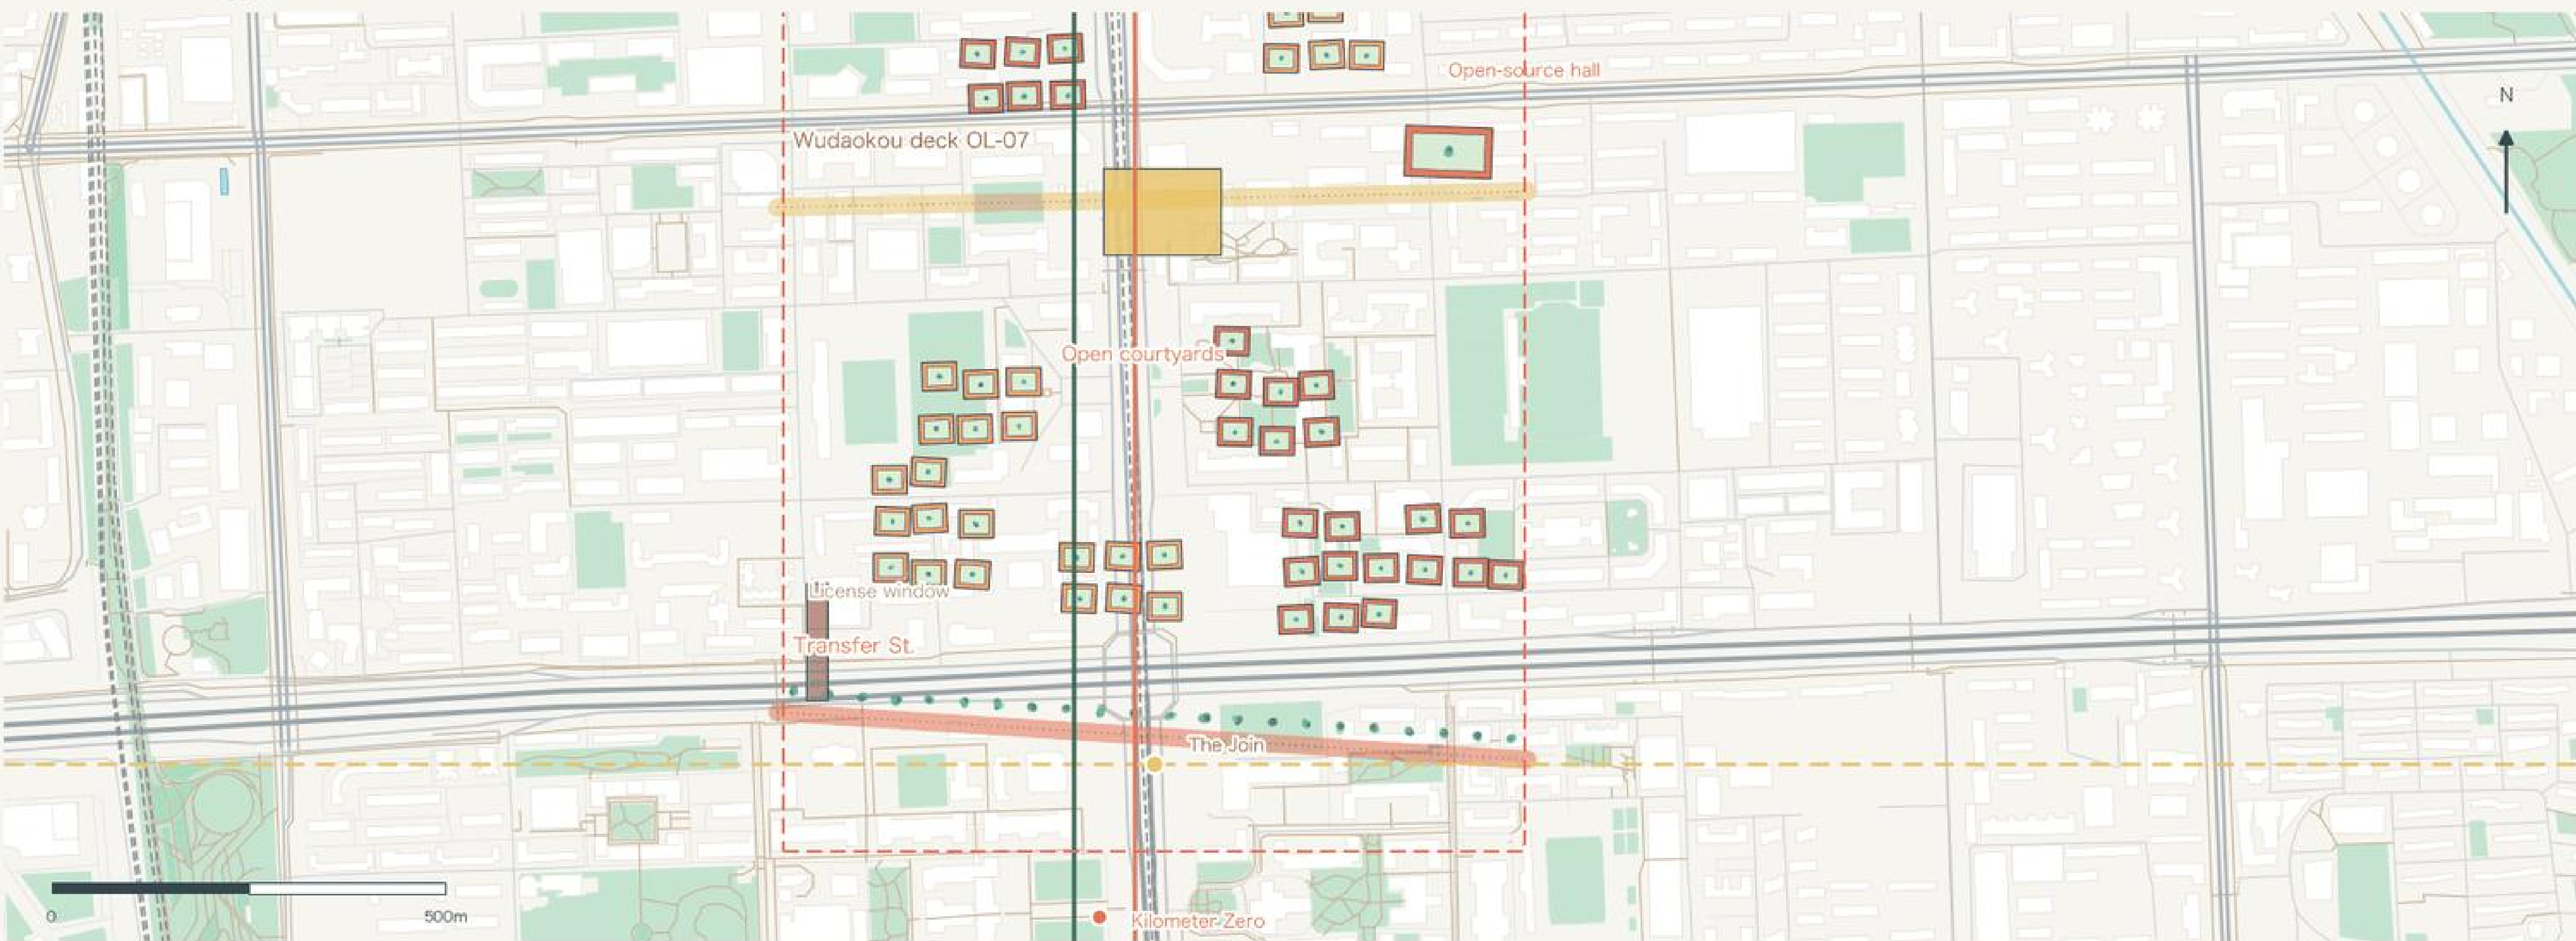

Three key-area plans: real fabric, three grammars

1:2000-level study • existing fabric = real OSM basemap (white), design inserts in color | provisional boundaries

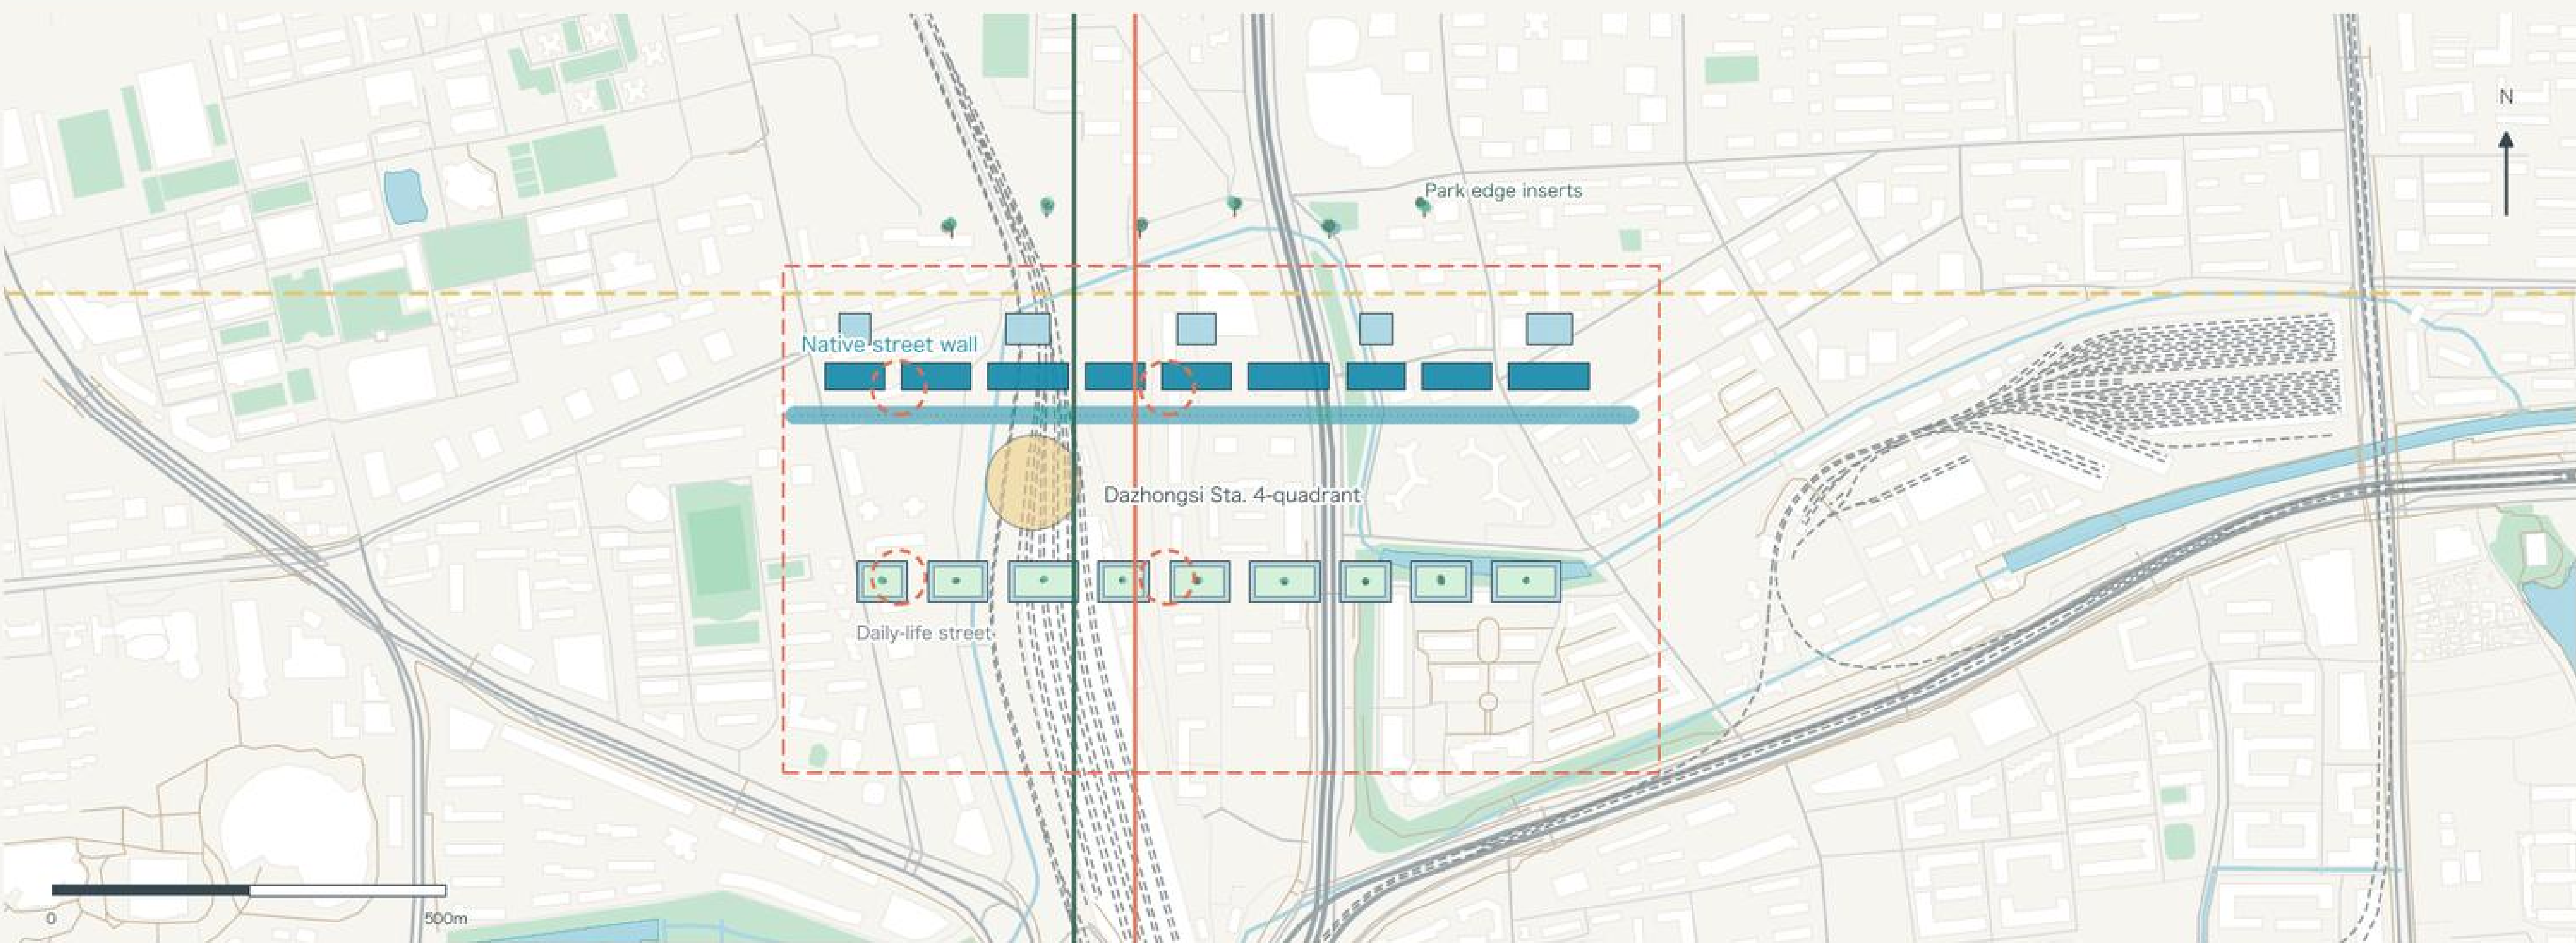

Zhongzhiyuan • Garden Innovation St.
Upgradeable urban mainboard | ~192 ha

Origin • Innovation Source
Over-the-wall ecology | ~104 ha

Dazhongsi • The Native Street
Verified adoption on street | ~72 ha

Upgradeable R&D units

District product / transfer

Native street wall

Design street / deck

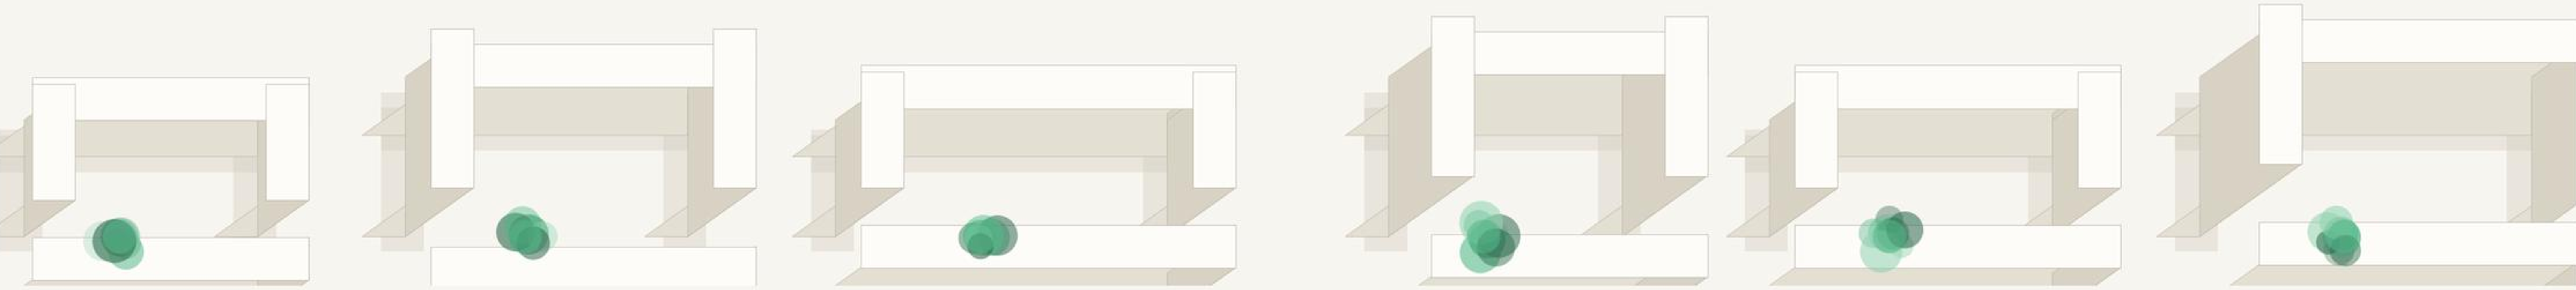

White = existing buildings (OSM 2026-08) • dashed = provisional boundary • color = design inserts (concept, not cadastral)

OPENLINE-100 • key-plans-2000 • fabric: OSM real basemap + designed inserts • BOARD v1.2

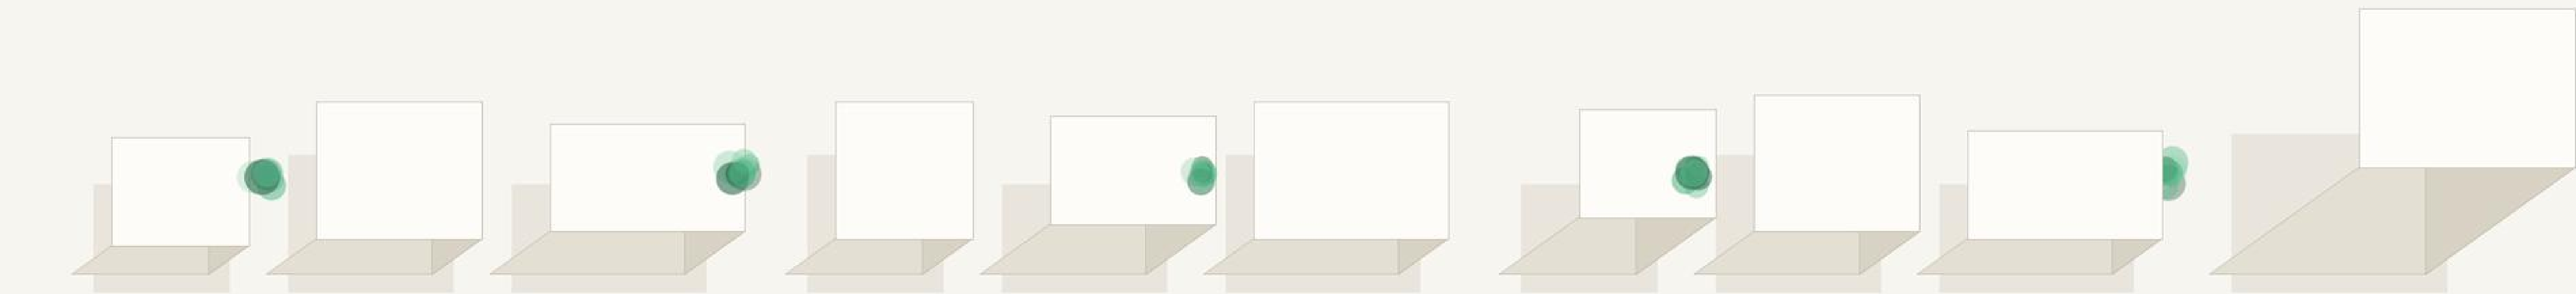

Massing follows the block; the skyline grows no towers

Top: white-model axons per area (concept heights) • bottom: S→N skyline along the park

Zhongzhiyuan • 18 - 36 m garden courtyards

Origin • low near campus ≤45 m (fine grain)

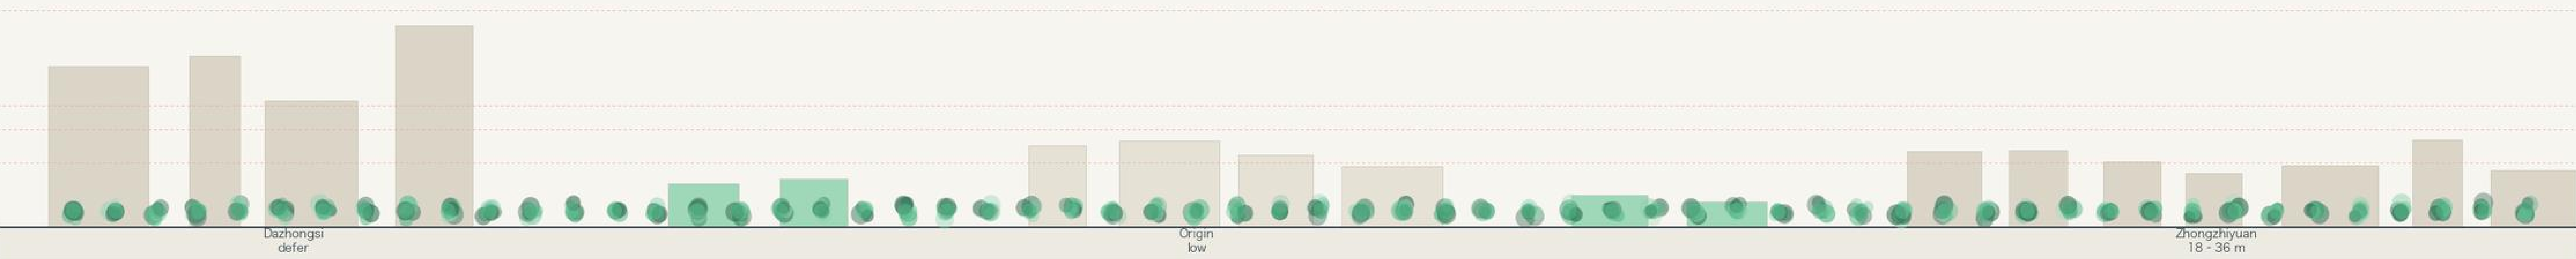

Dazhongsi • continuous 24 - 36 m wall, defers to existing HQ

Existing HQ 80 m
no new tower

Along park S → N: no new towers; canopy leads the skyline

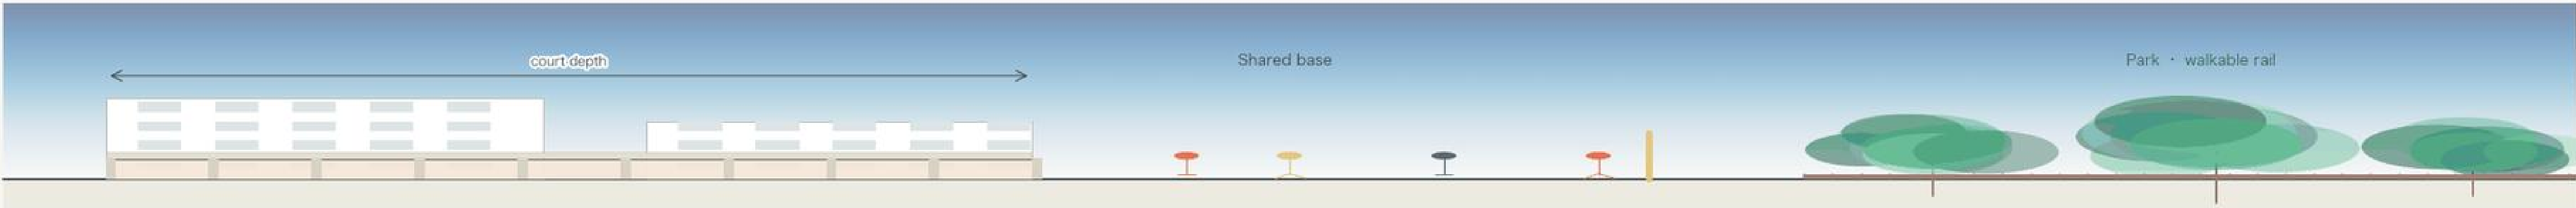

OPENLINE-100 • key-massing-skyline • concept heights, caps yield to official parcels • BOARD v1.2

Five places — cut them open and you know them

Real place sections: courtyard / license window / deck / arrival / Qinghe edge

01 Zhongzhiyuan • courtyard & park

How to read

02 Origin • license window & KM0

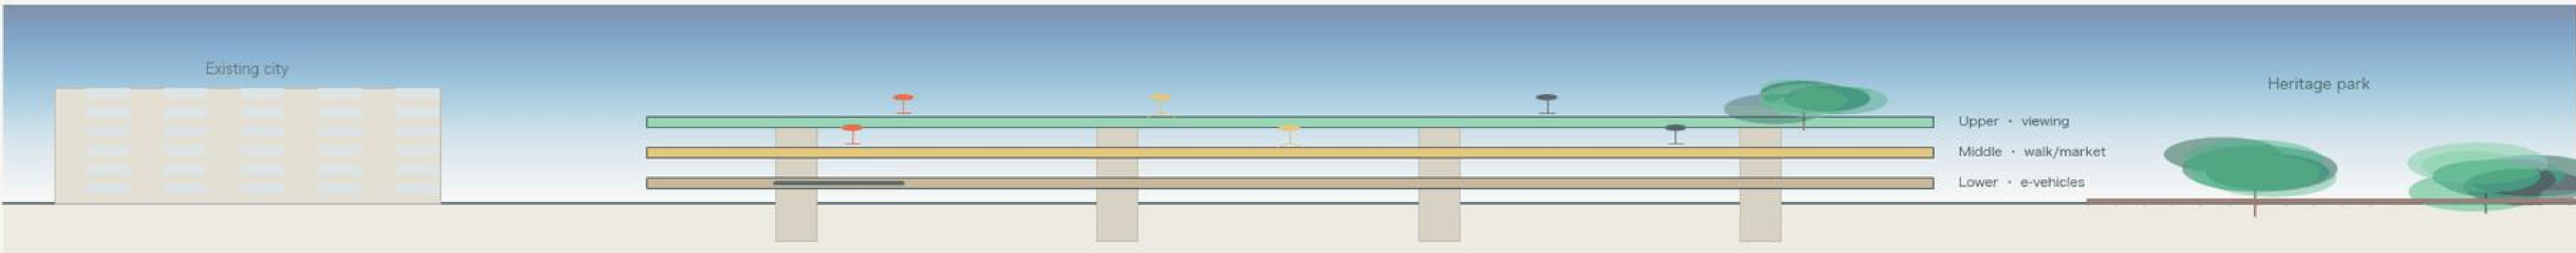

Each is a cut

through ground:

walls, rails,

water, people —

03 Wudaokou • 3-level stitch deck

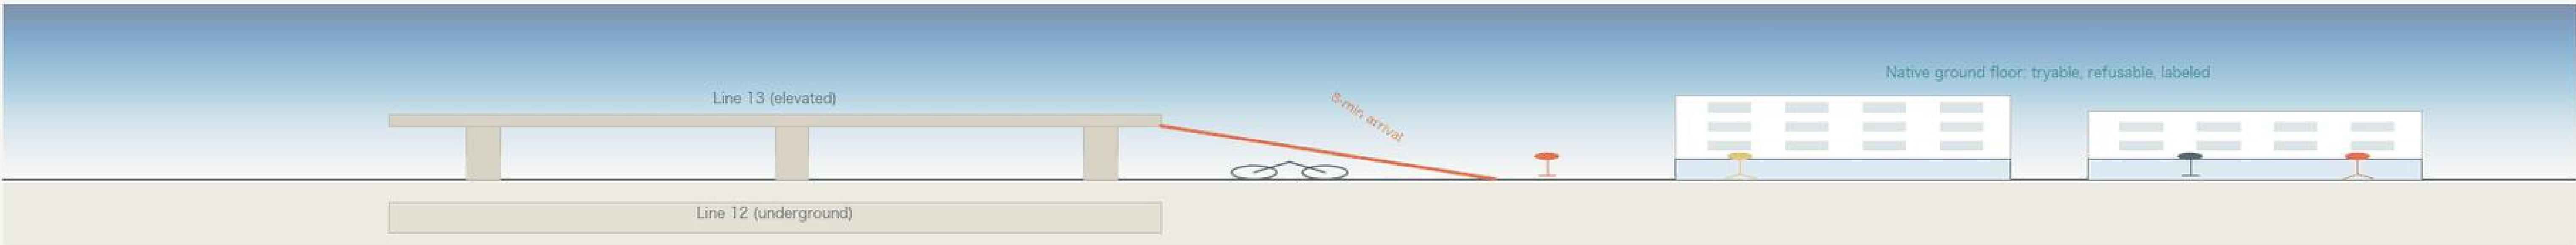

not a one-point

symbol street.

Depth = rules

04 Dazhongsi Sta. • arrival only

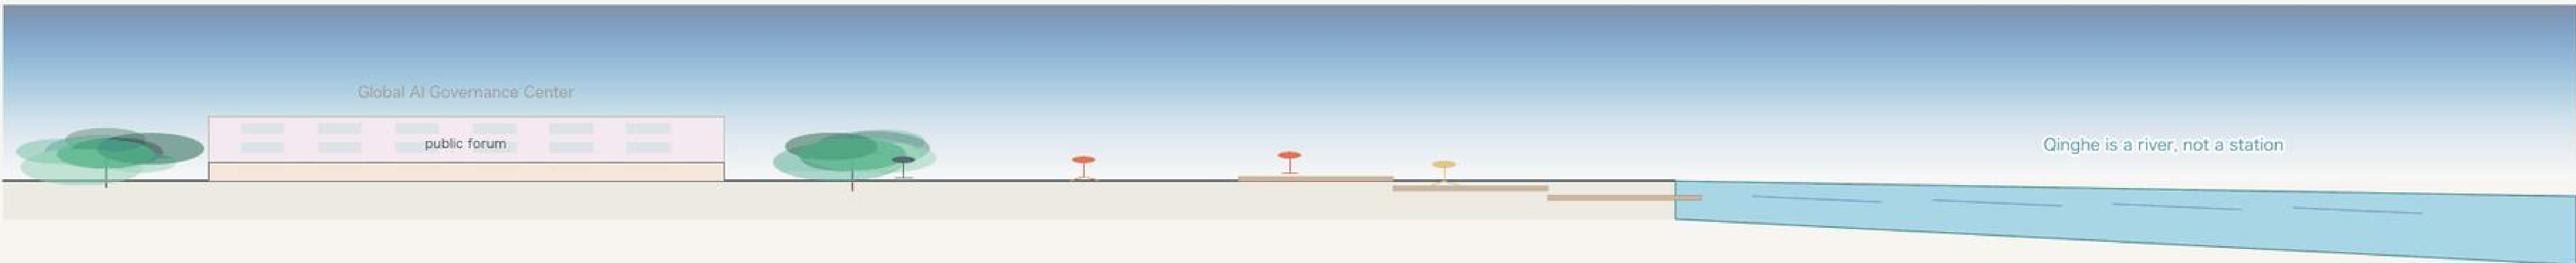

hold in section:

join • verify

exit • inherit

05 Qinghe • governance to river

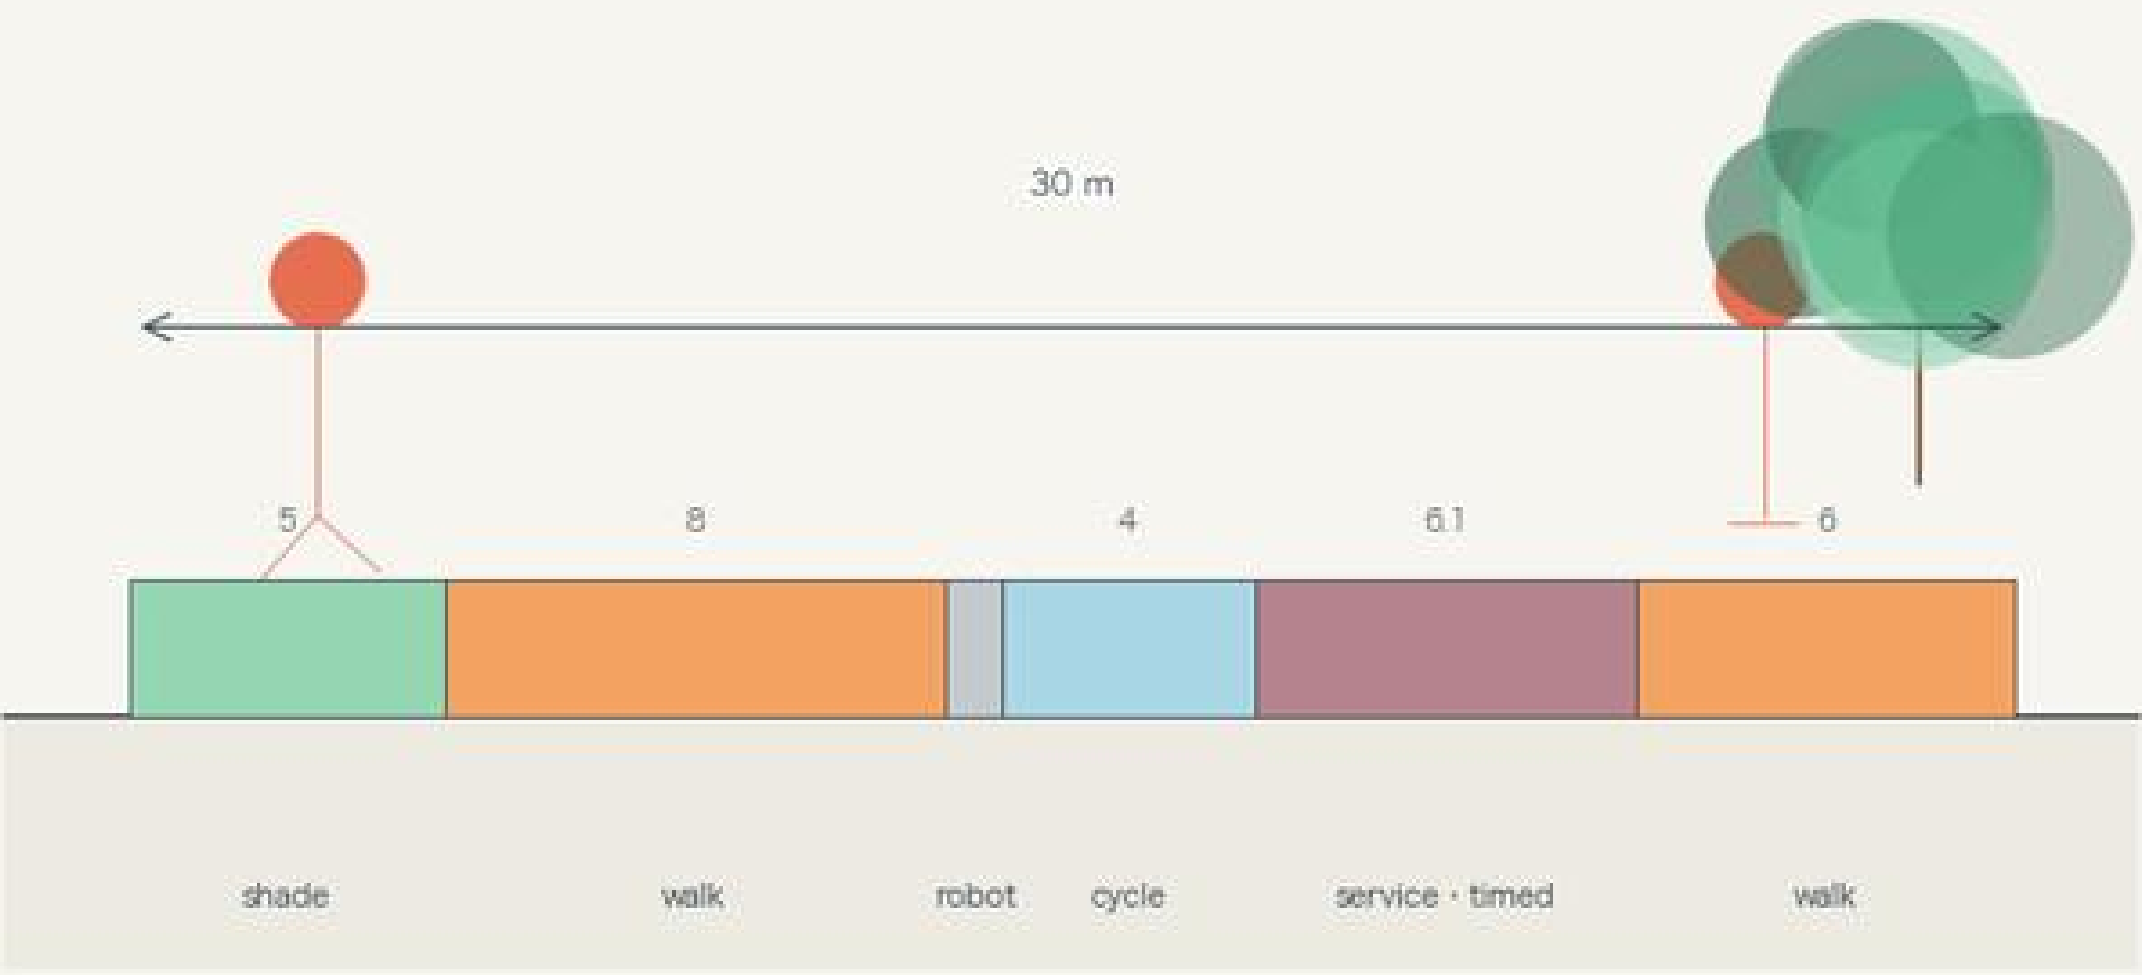

Six typical streets, one Openline grammar

Section series A - F • not engineering • walking ≥50% at all times • robot band never becomes car lane

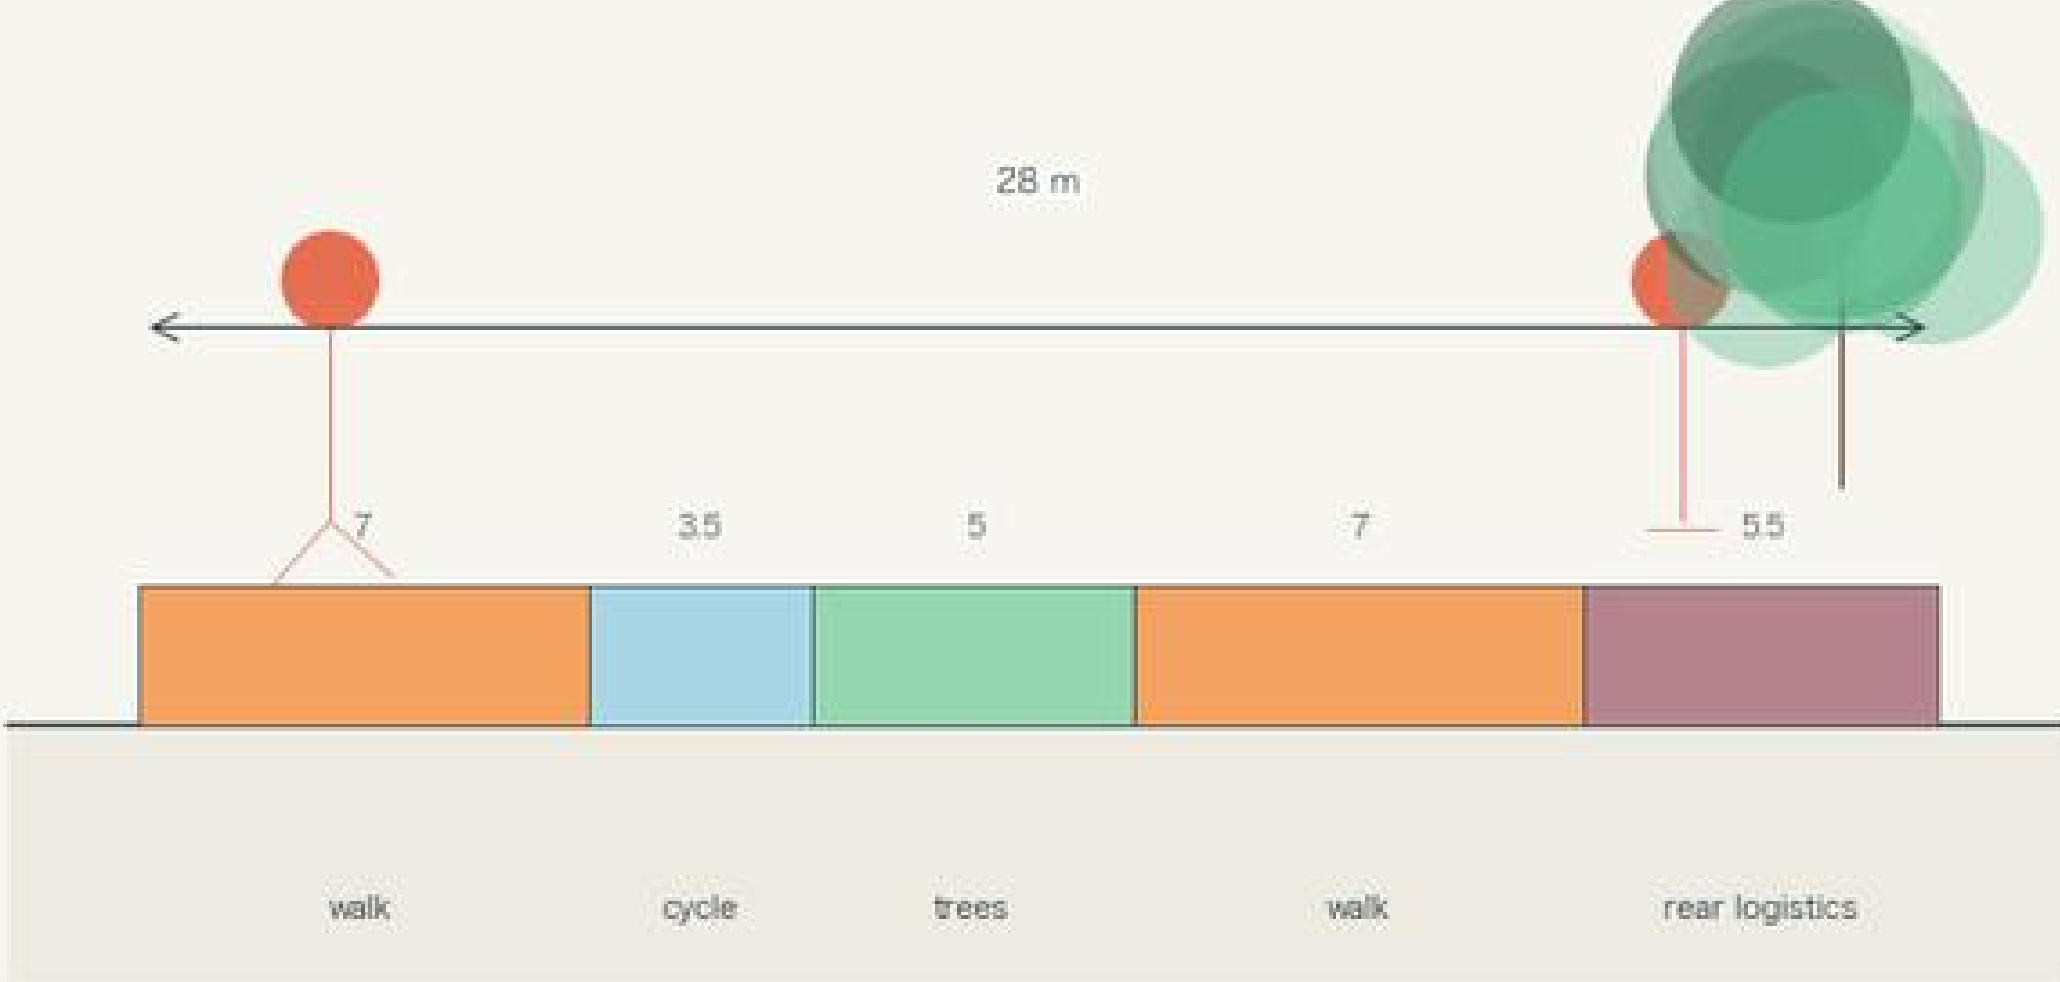

A • L1 Fact Line (walkable rail)

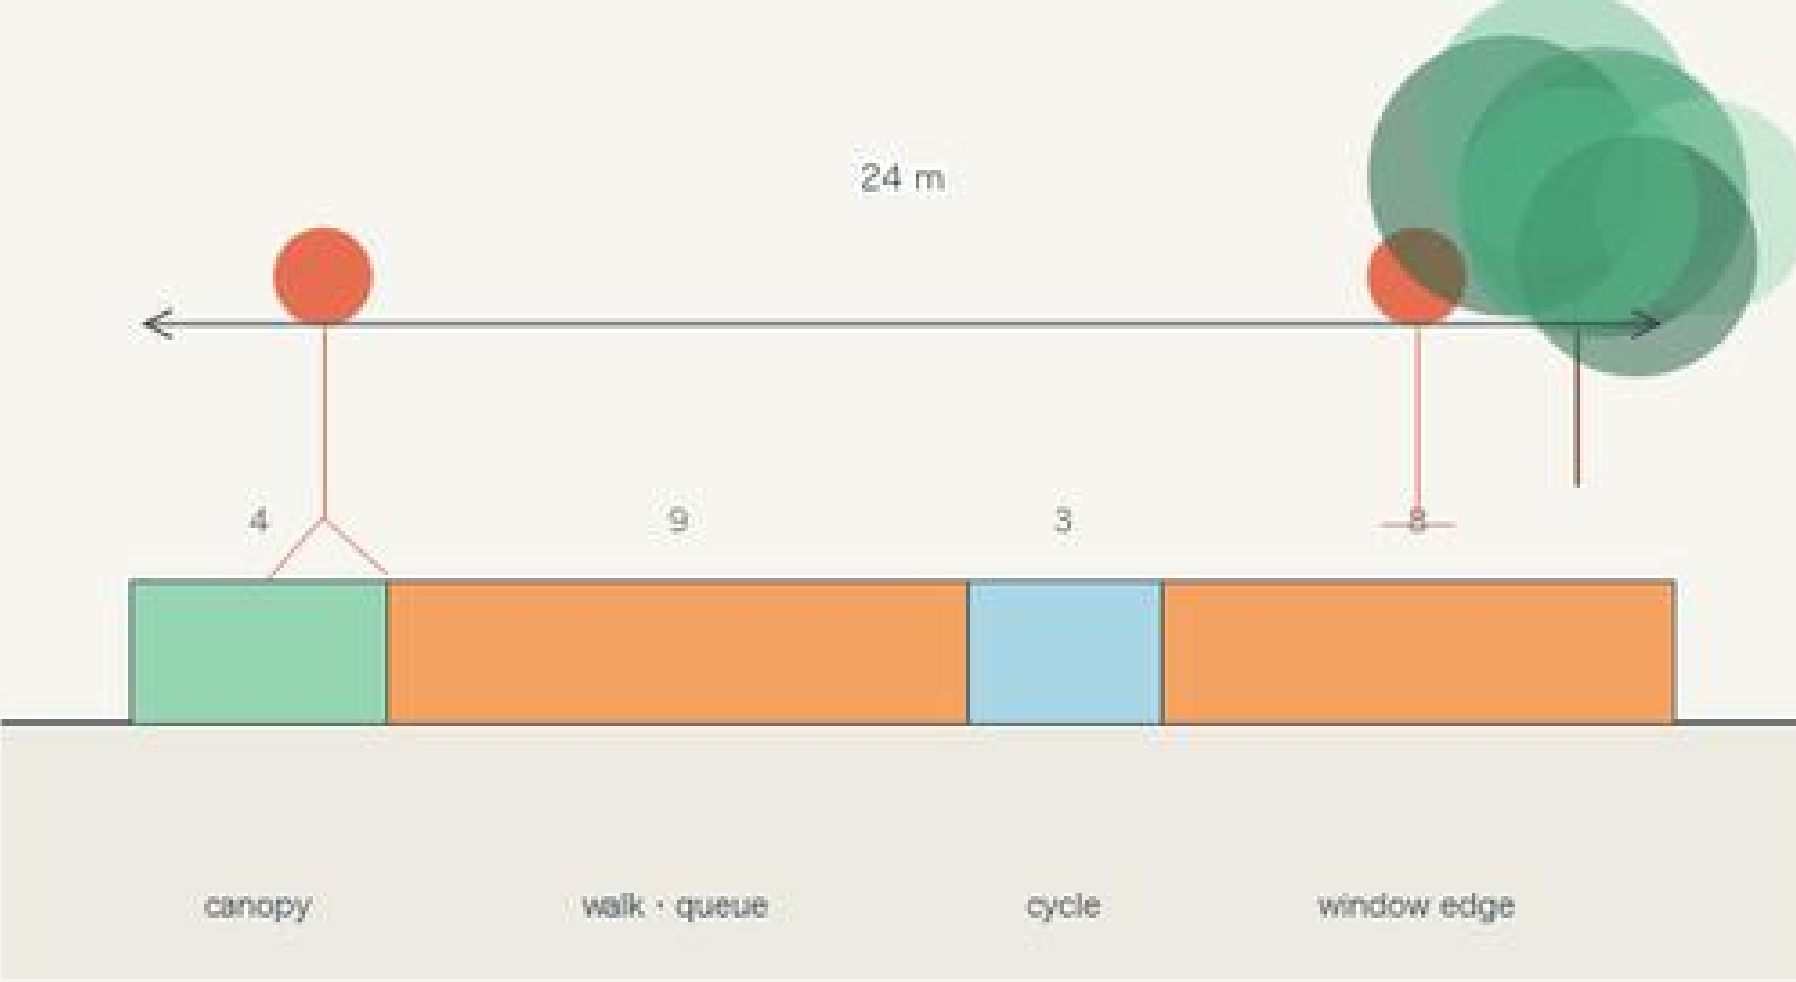

B • L2 Service Line (stations dock)

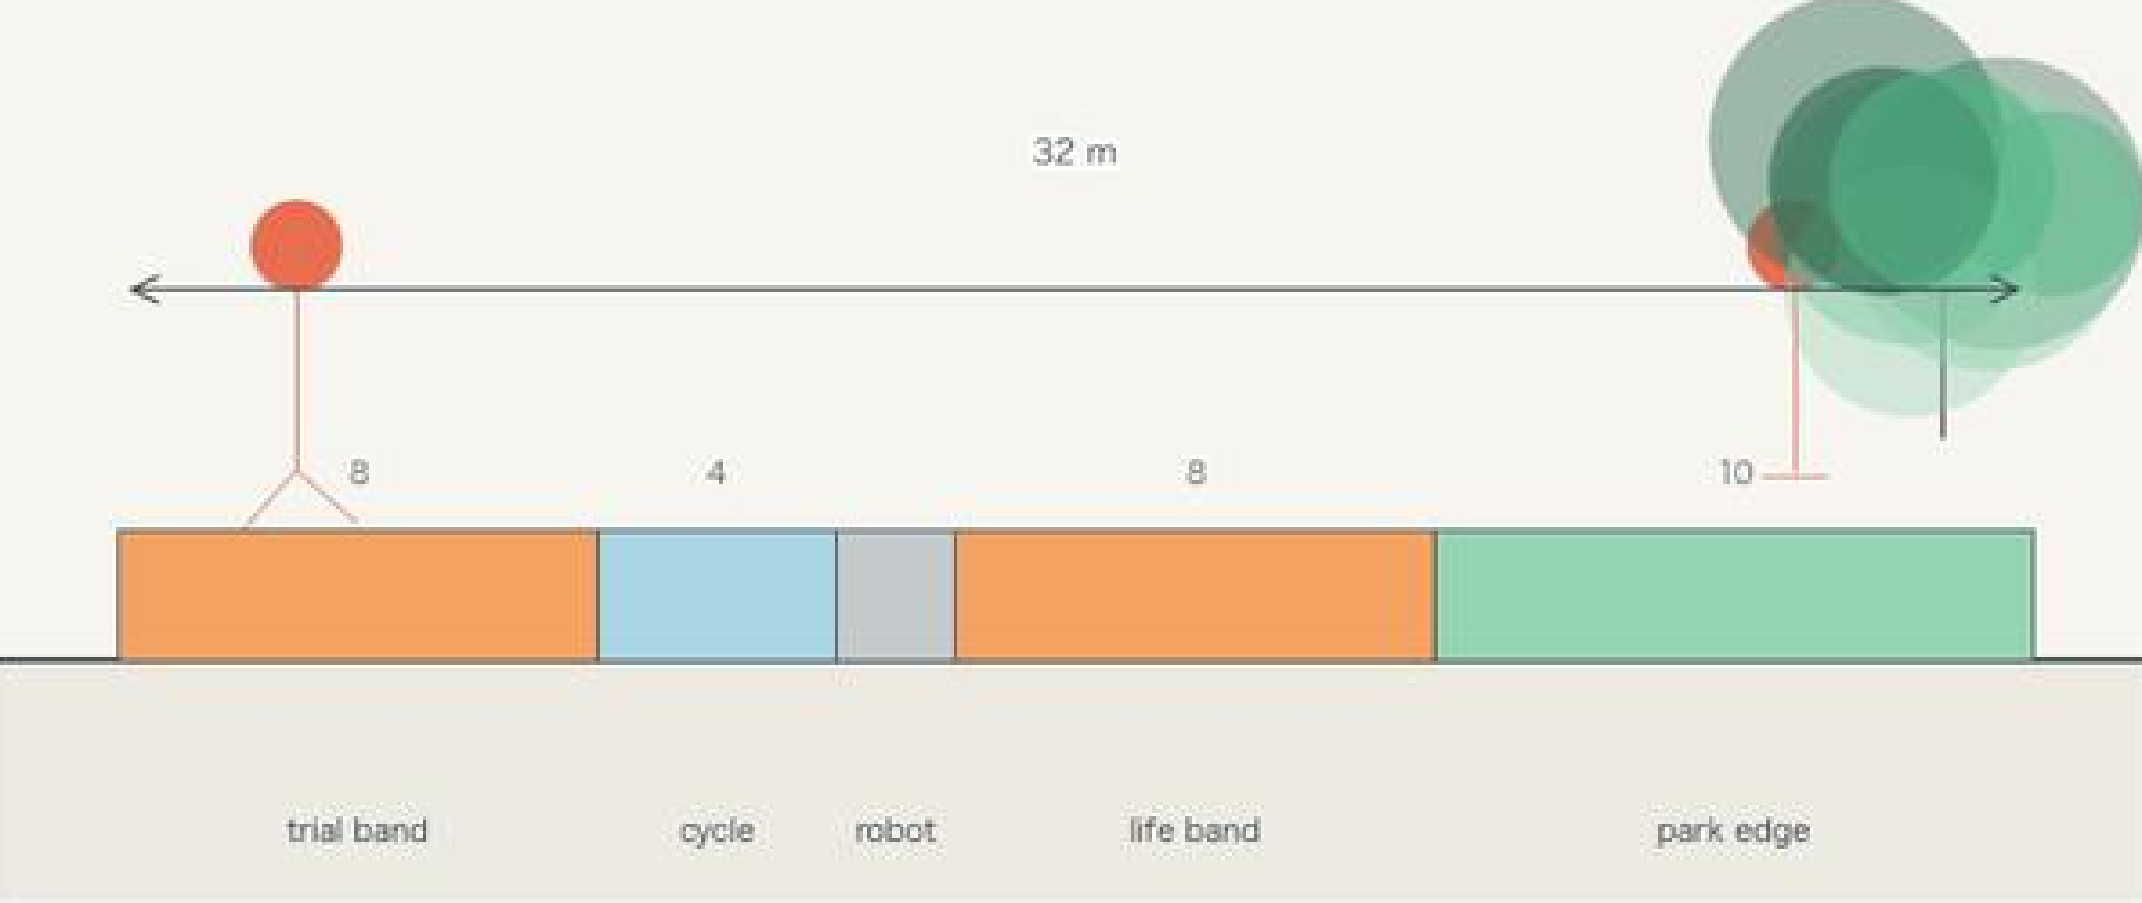

C • Collaboration St. (logistics behind)

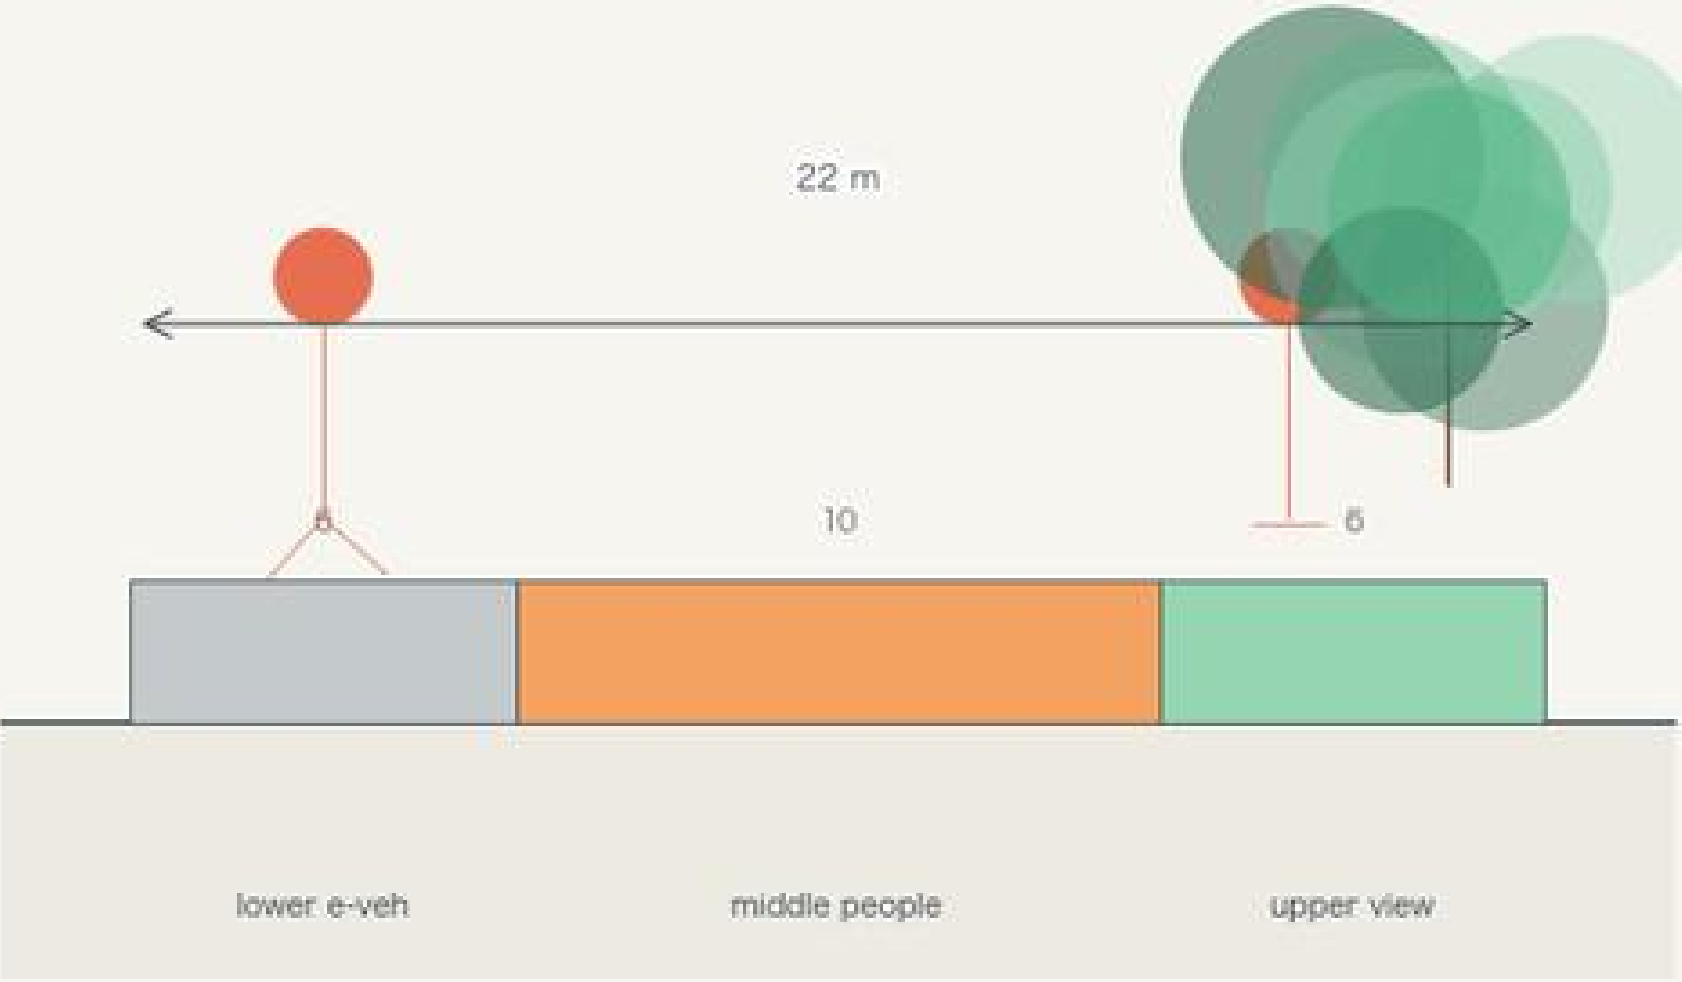

D • Transfer St. (windows on edge)

E • Native St. (trial / life split)

F • Deck (e-vehicle / people / view)

Public space first, intensity follows: 0 - 1 • 1 - 3 • 3 - 10 yrs

Same actions as OL-01 - 10 • phasing is not a funding plan | real OSM fabric | dashed = not yet built

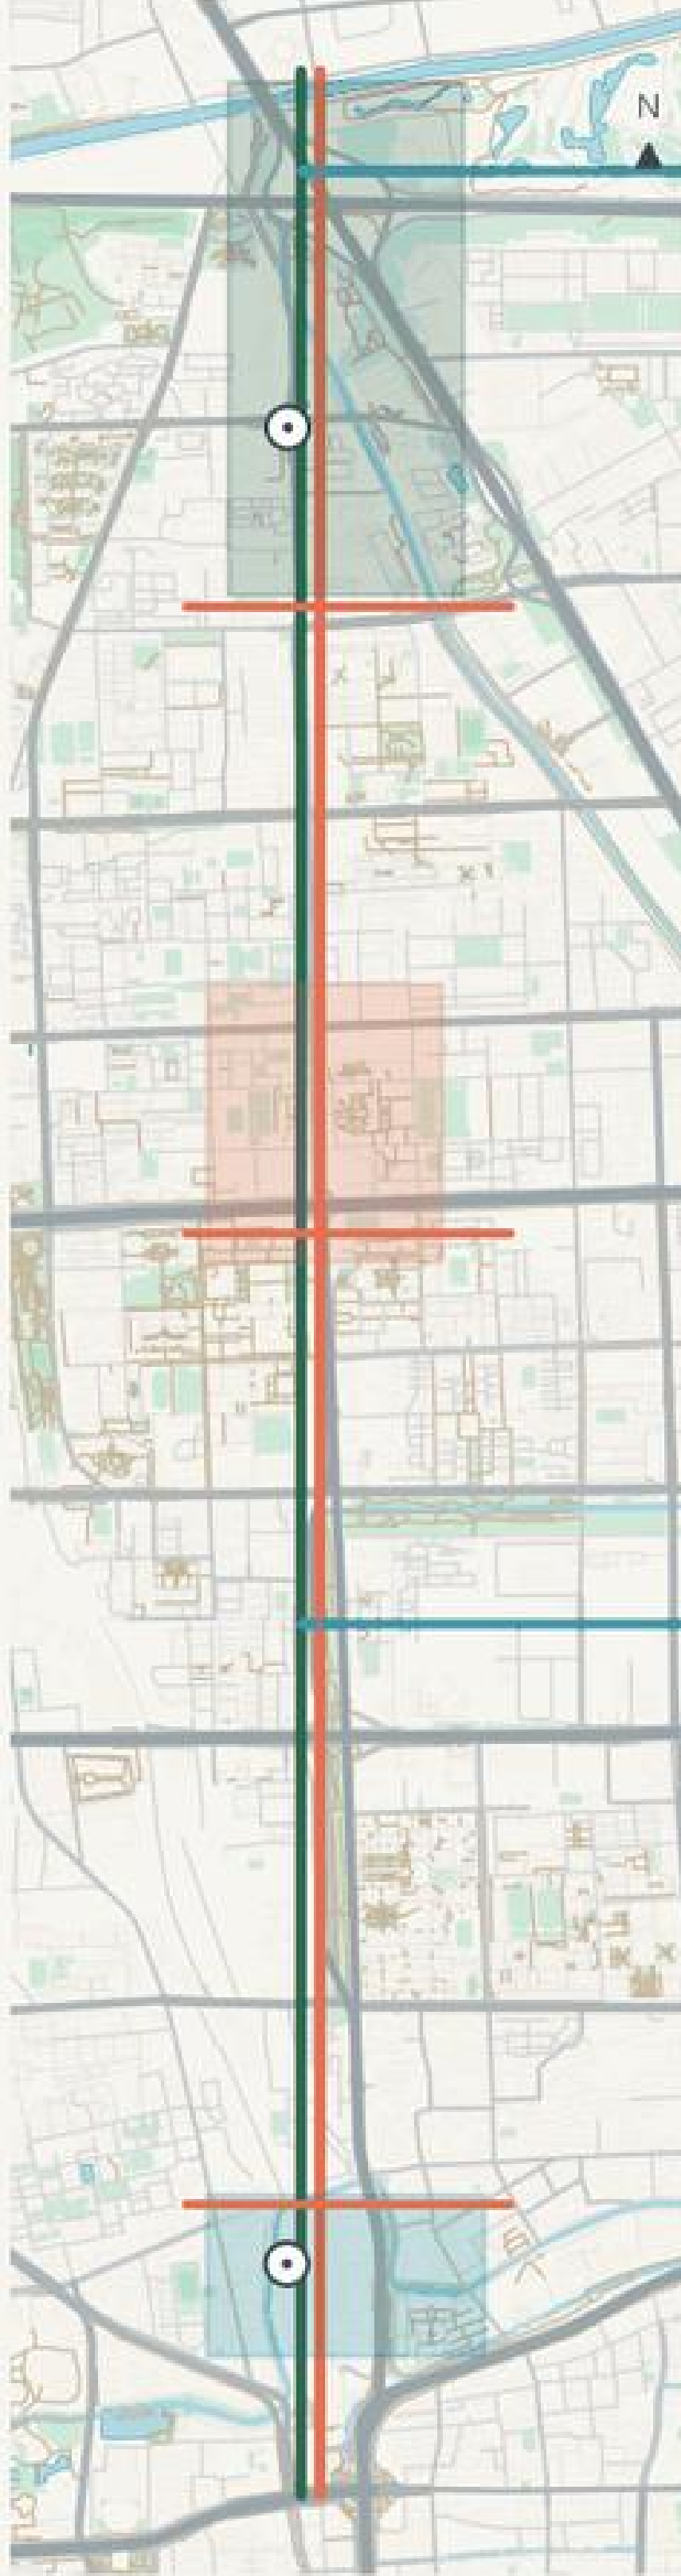

0 - 1 yr • prototype

1 - 3 yr • streets

3 - 10 yr • network

0 - 1 yr • prototype

- Arrival first
- KMO + M-stitch sample
- Single station prototype

1 - 3 yr • streets

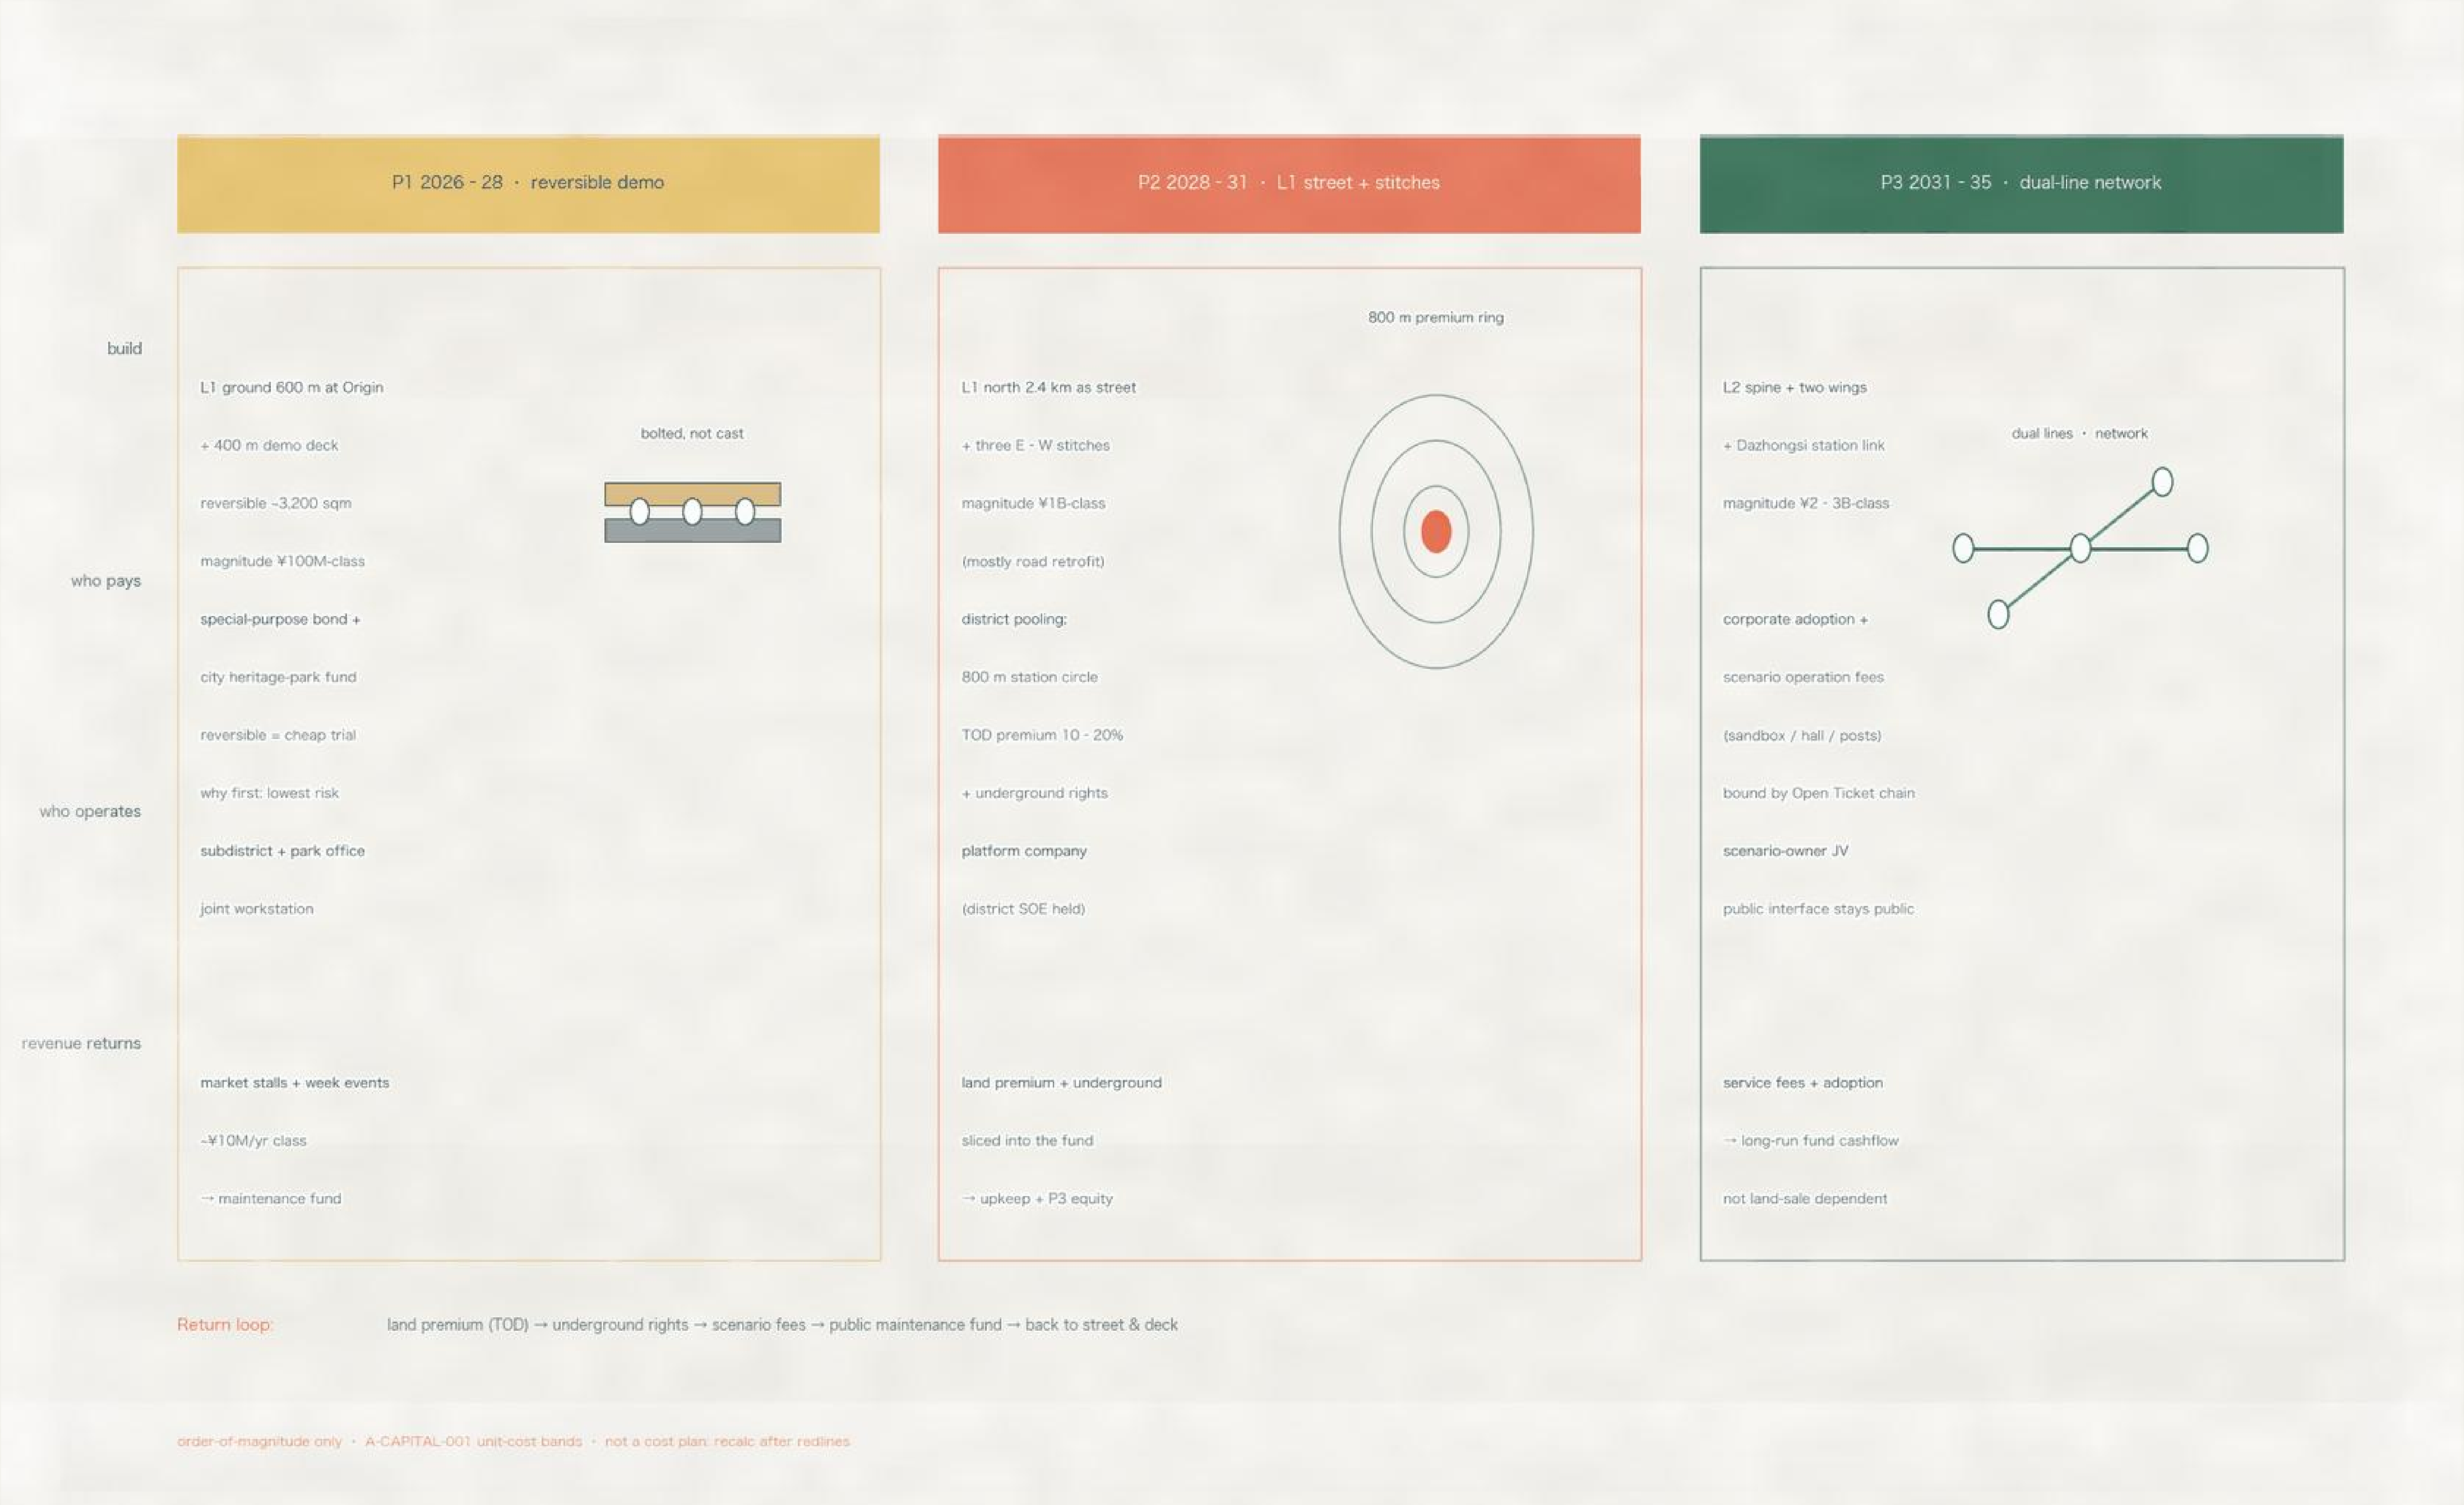

- One unit cluster opens
- Native street pilot
- License window & hall

3 - 10 yr • network

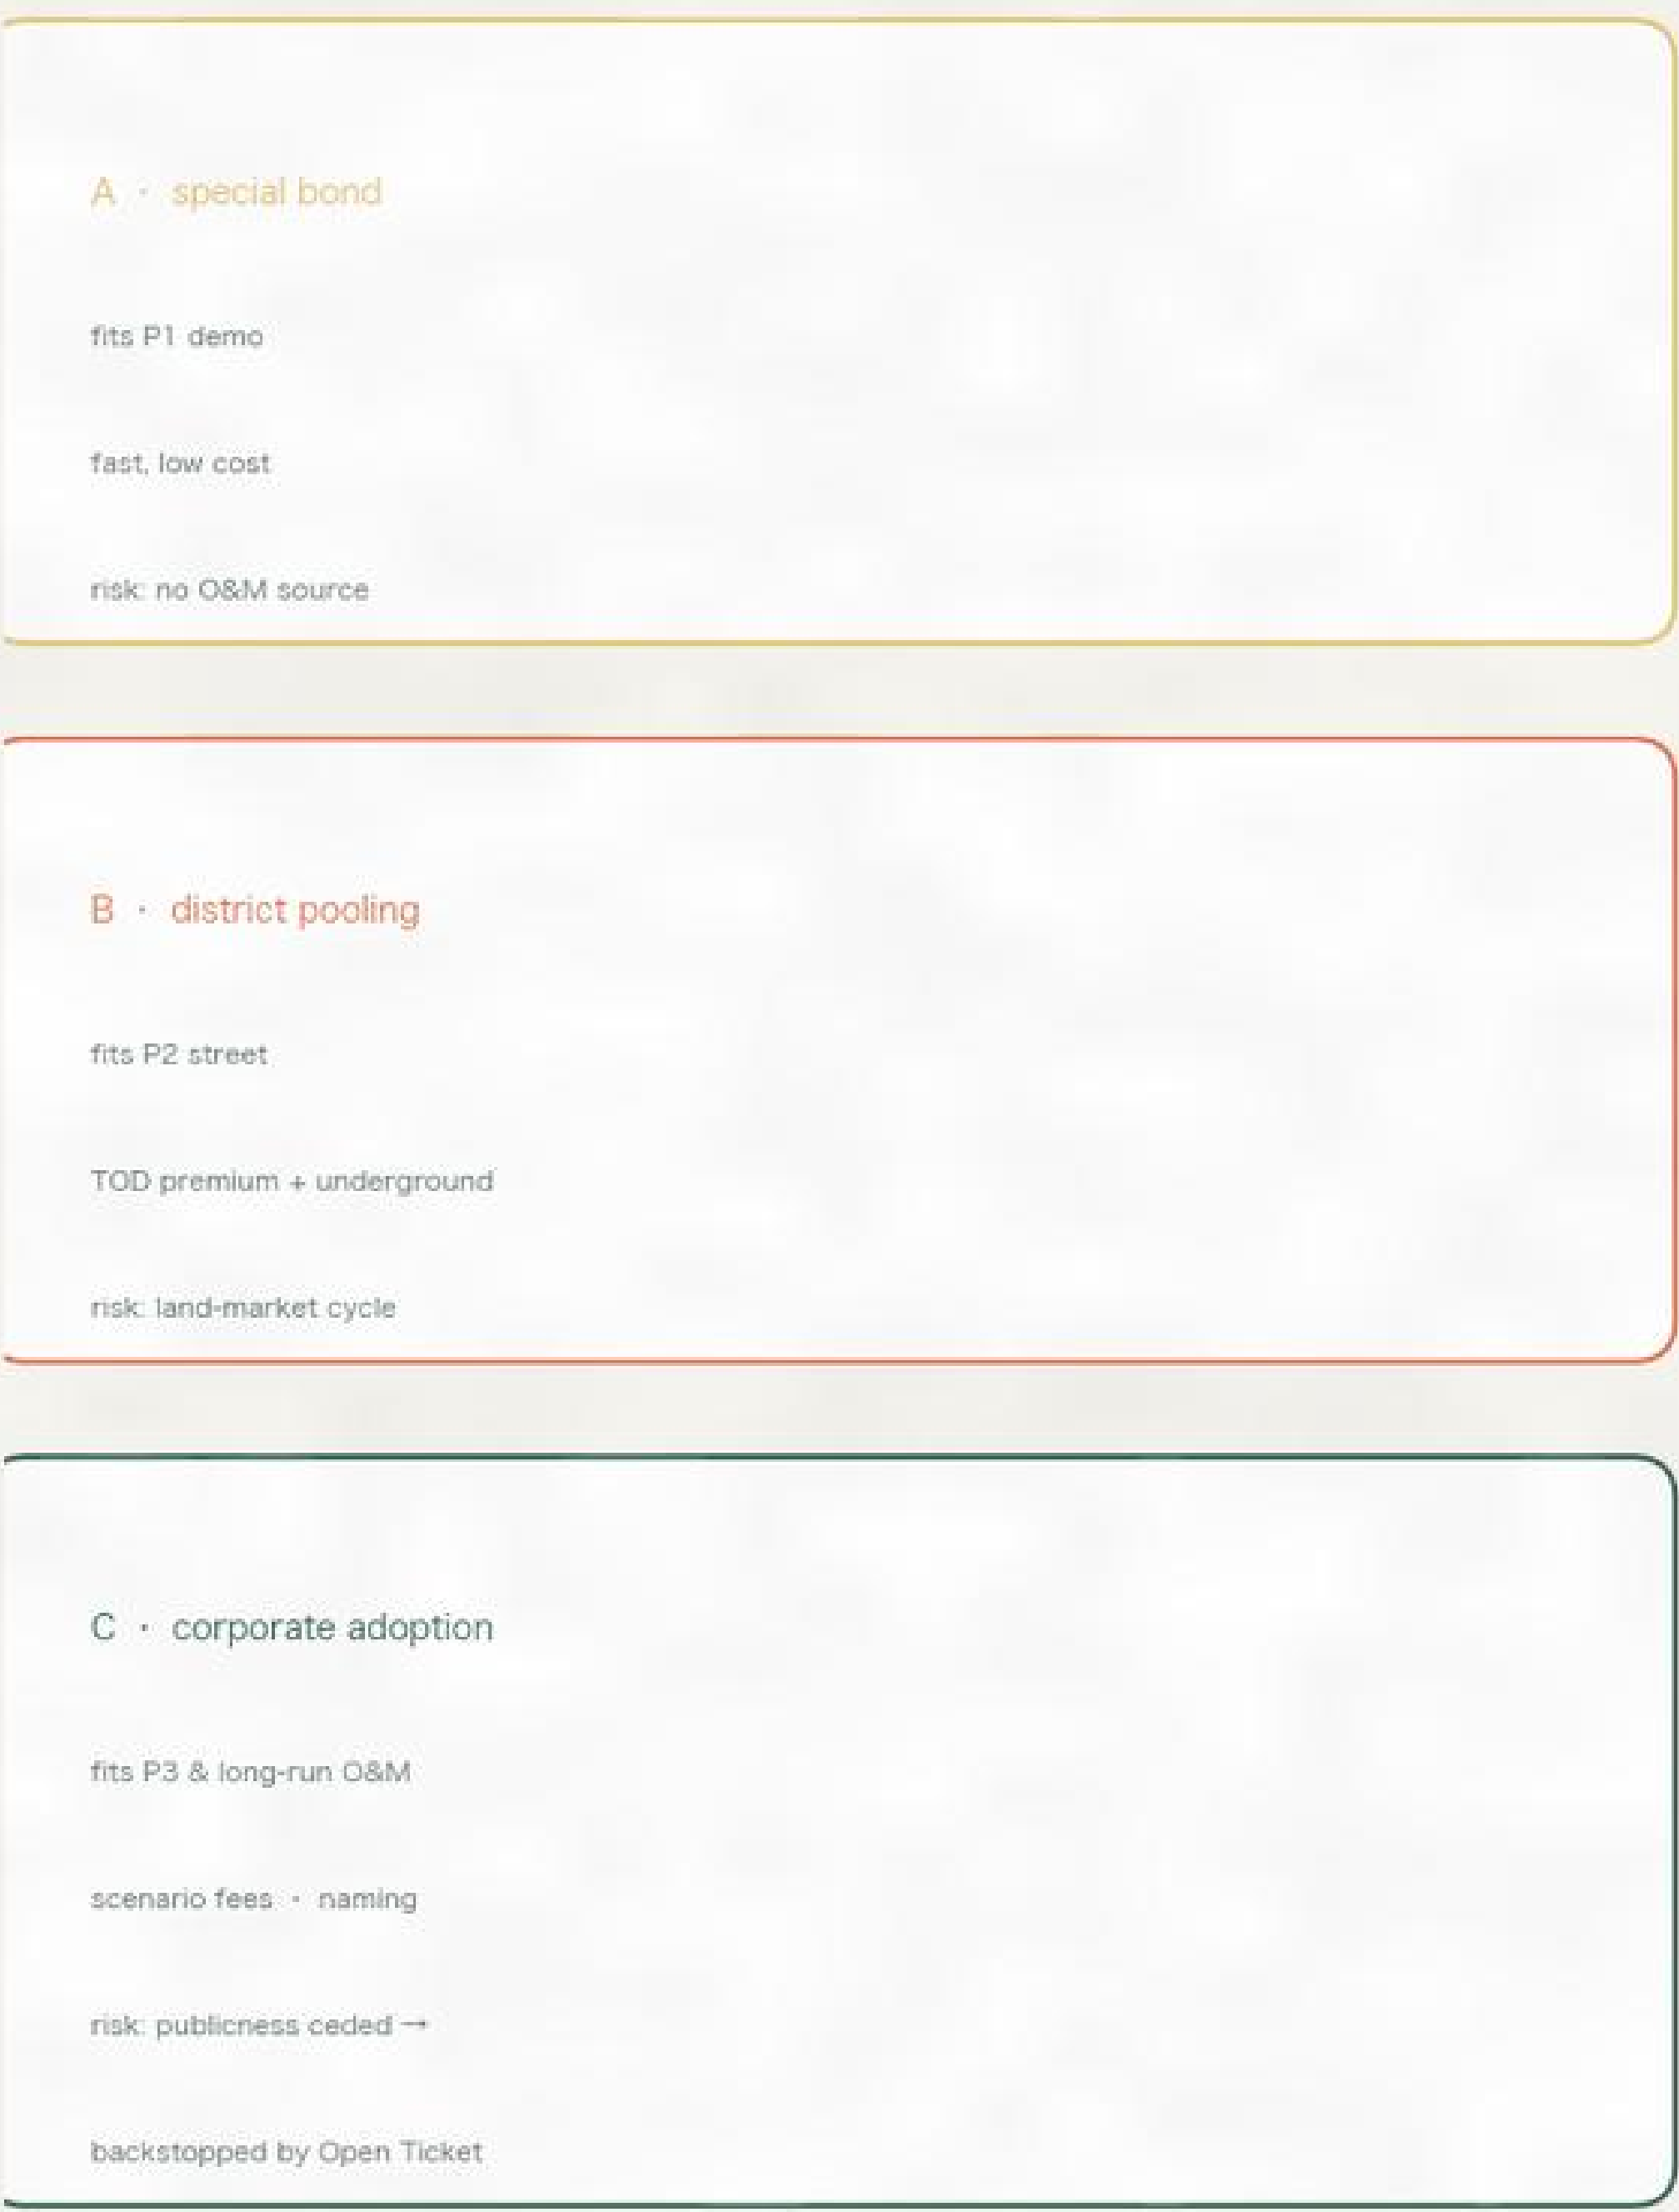

- Three-area network
- OL-07 deck mid-term
- Governance center

Capital logic of phasing: reversibility is low risk

Each phase answers build / pay / operate / return | bond → pooling → adoption relay | magnitude only, A-CAPITAL-001

Three financing scenarios • relay, not either-or

What reversibility buys

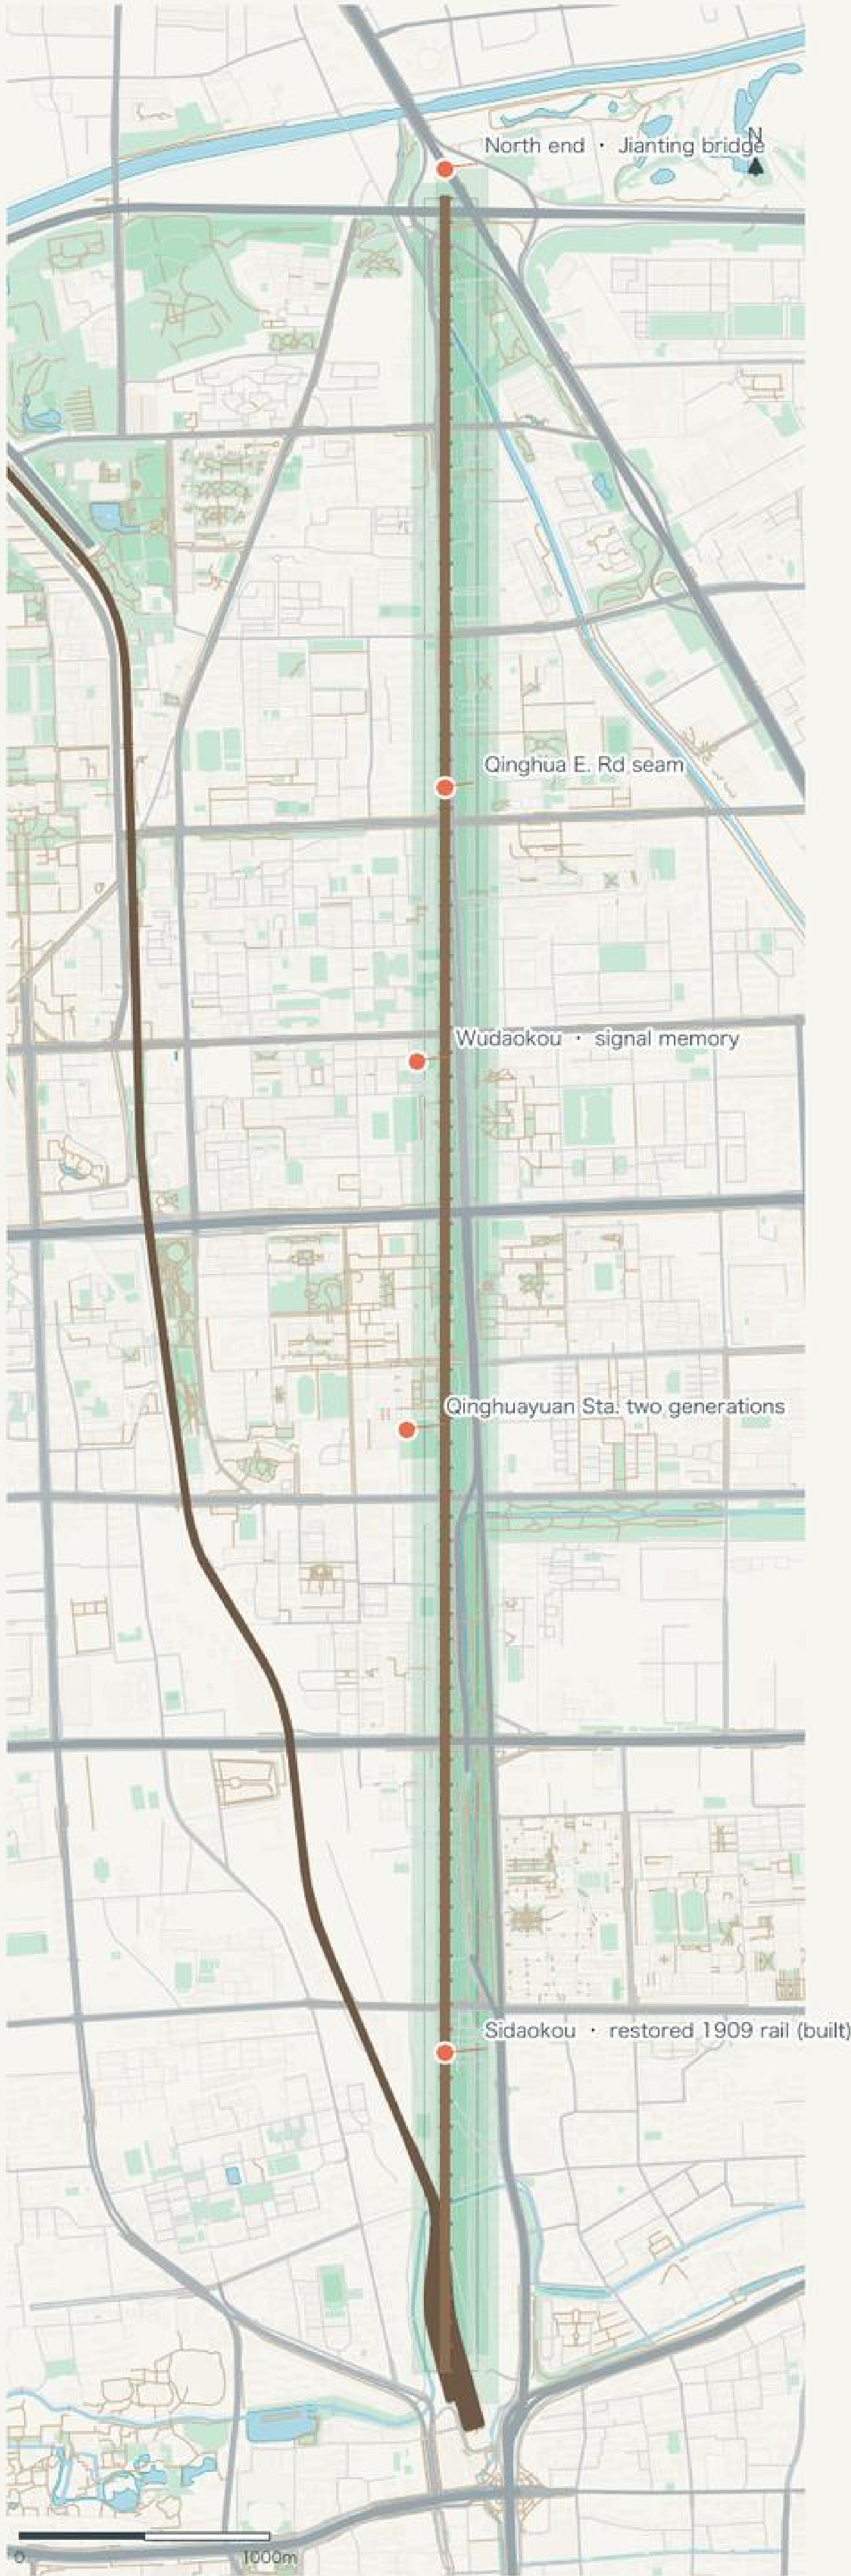

deck unbolts → asset relocates

a wrong demo is not sunk cost

the real reason to go first

Rails made visible: steel sits in this ground

Real Jingbao rail alignment (OSM) × L1 Fact Line • heritage anchors at public geography

OPENLINE-100 • rails-in-fabric • real Jingbao alignment (OSM) + heritage anchors • BOARD v1.2

Five translations — steel visibly in the fabric

Ground • rail as paving

kept rail embedded in the walk

Section • archaeology trench

cut open: subgrade & ballast strata

Furniture • rails reused

railings / bench frames / lamp bases

Narrative • question stones

AI-ethics questions beside mileposts

Sound • steam × white-noise

rhythmic dialogue, mutable

Taboo: no unreachable exhibits, no fake authenticity

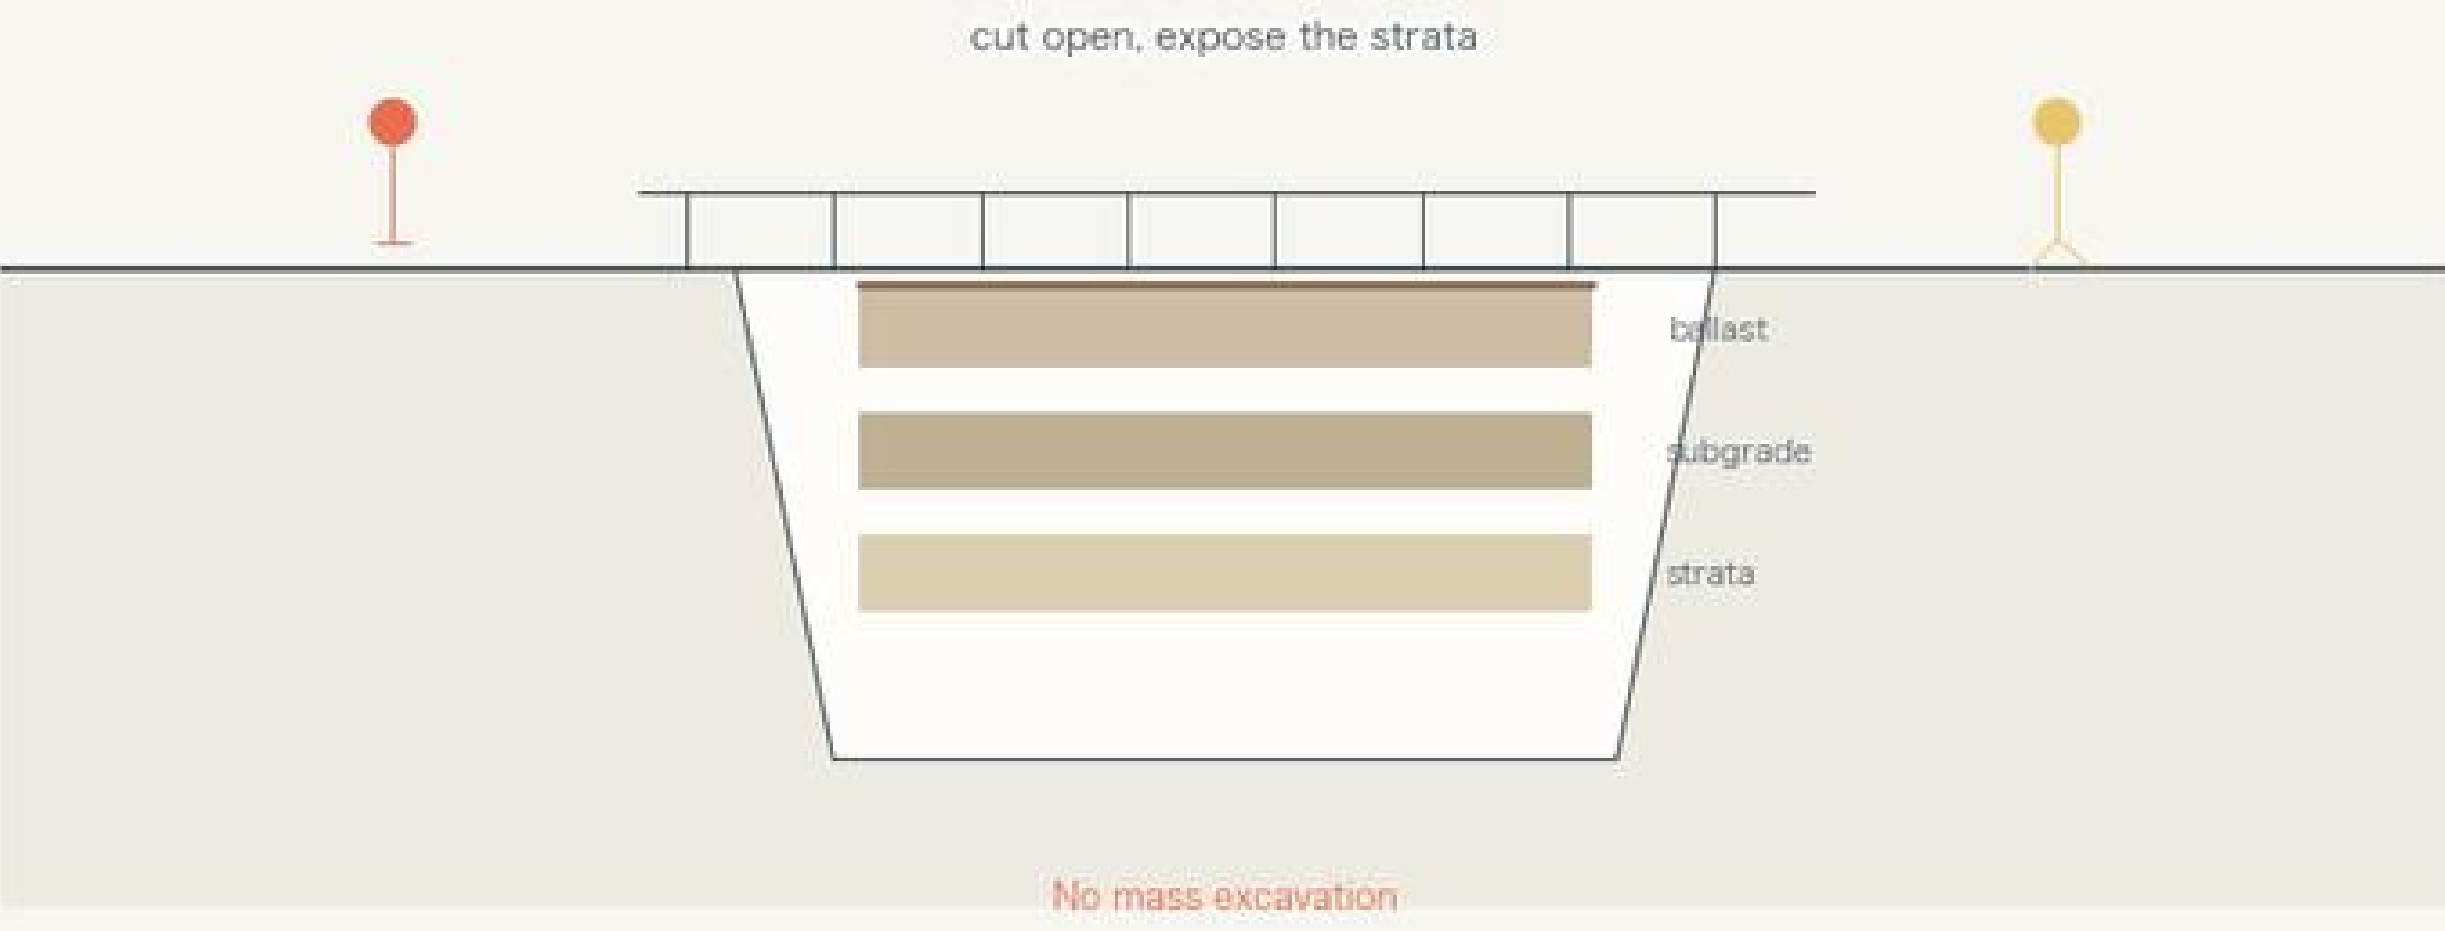

Let the rails grow into the ground: five material translations

Components enter the public library, versioned via Inherit • sound & inscriptions pilot only after review

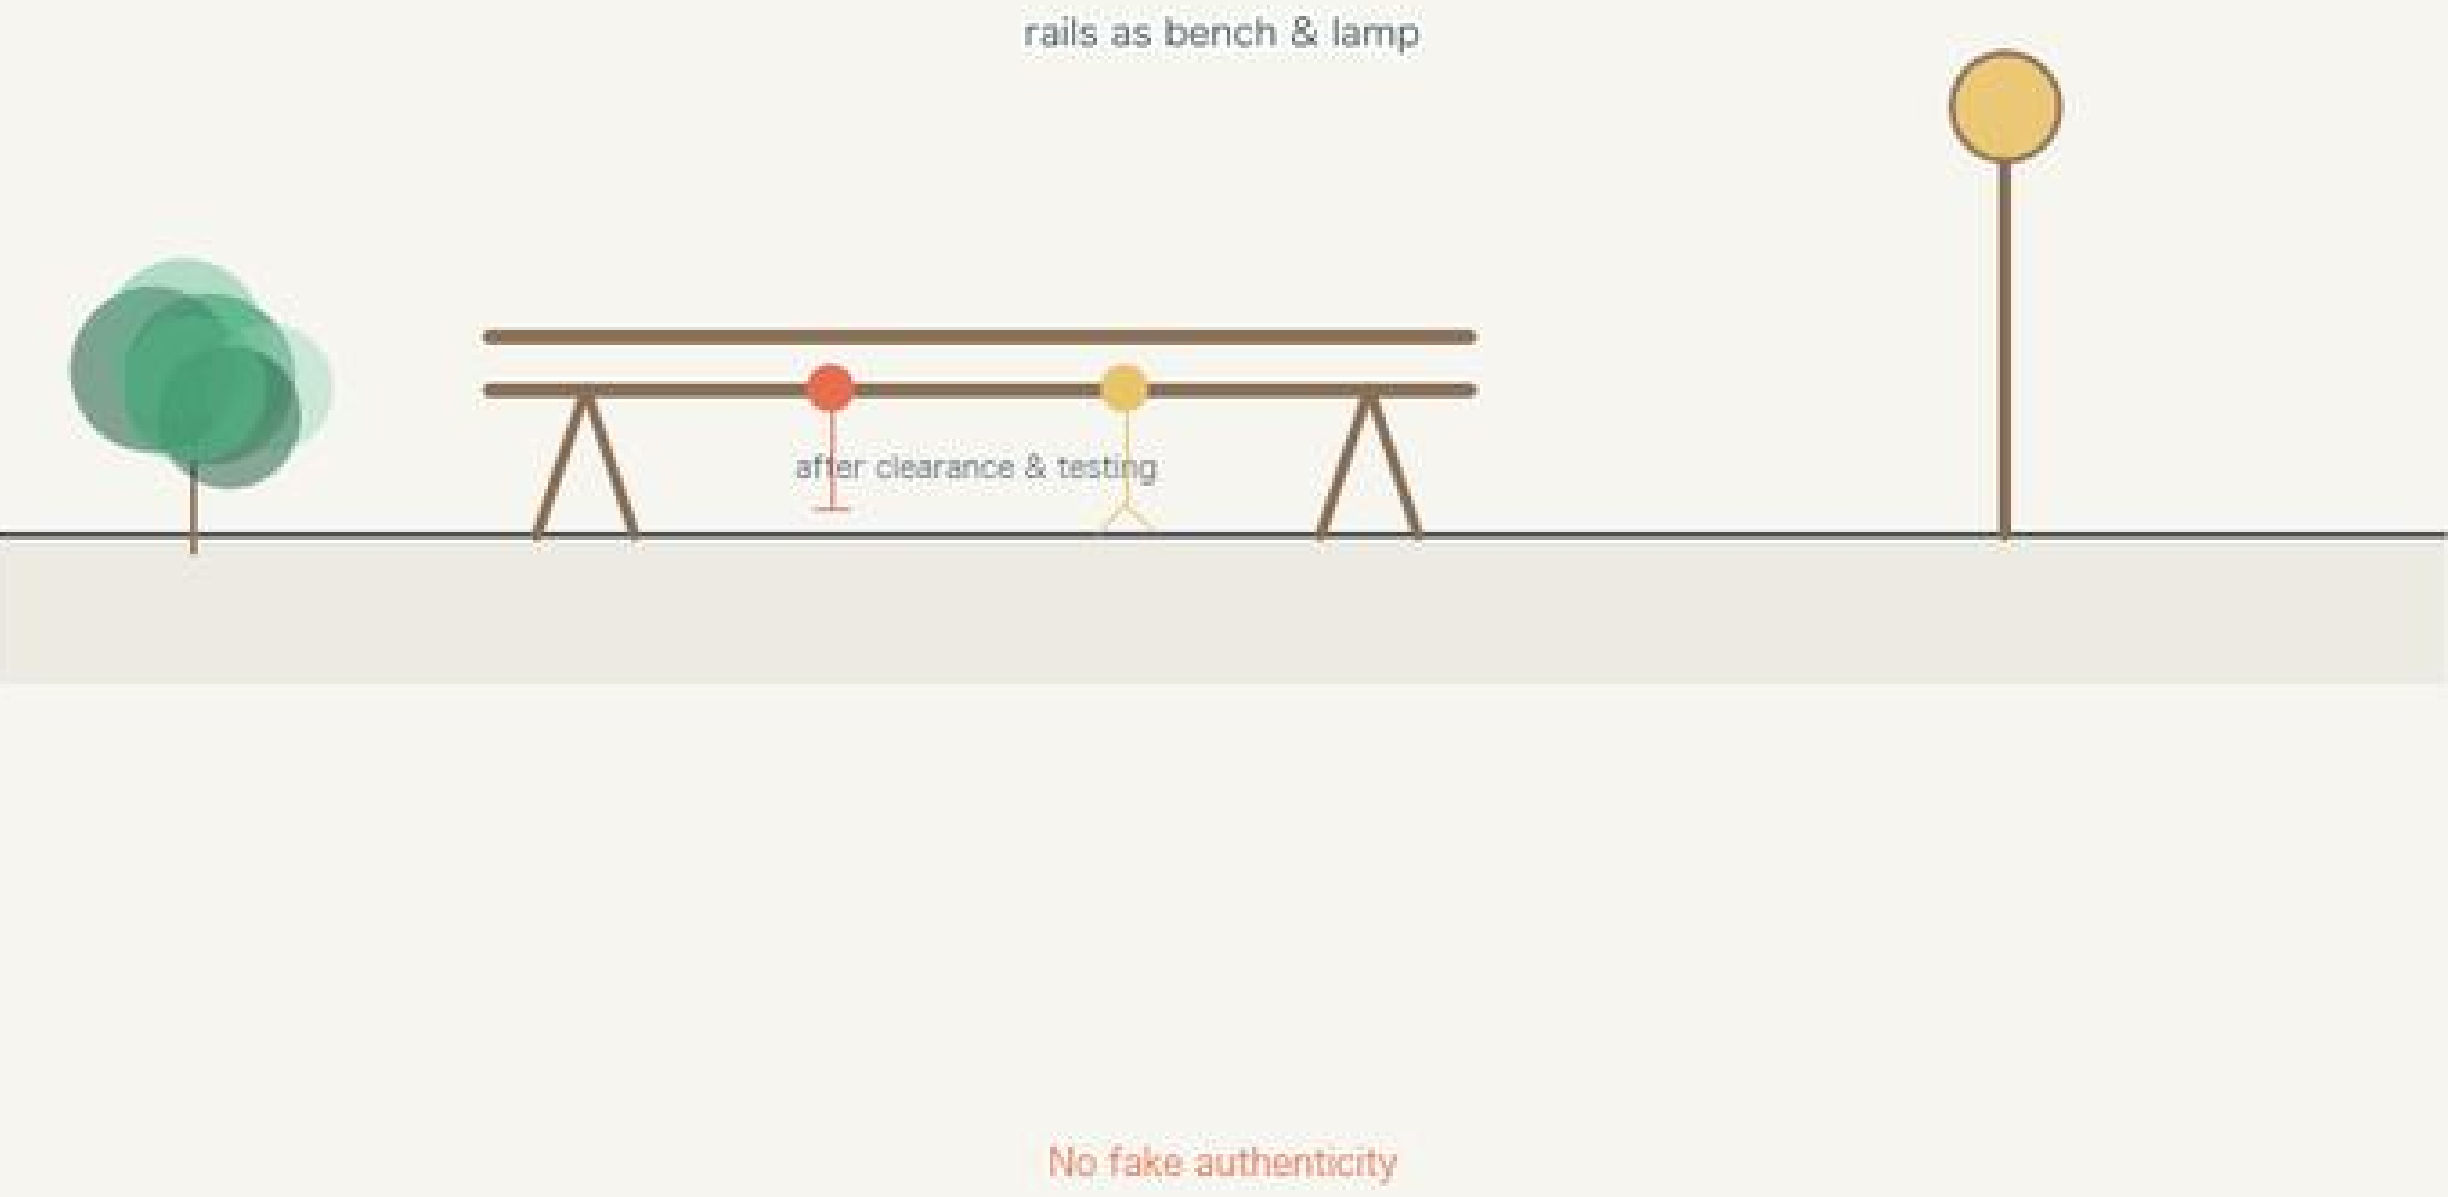

Ground • rail as paving

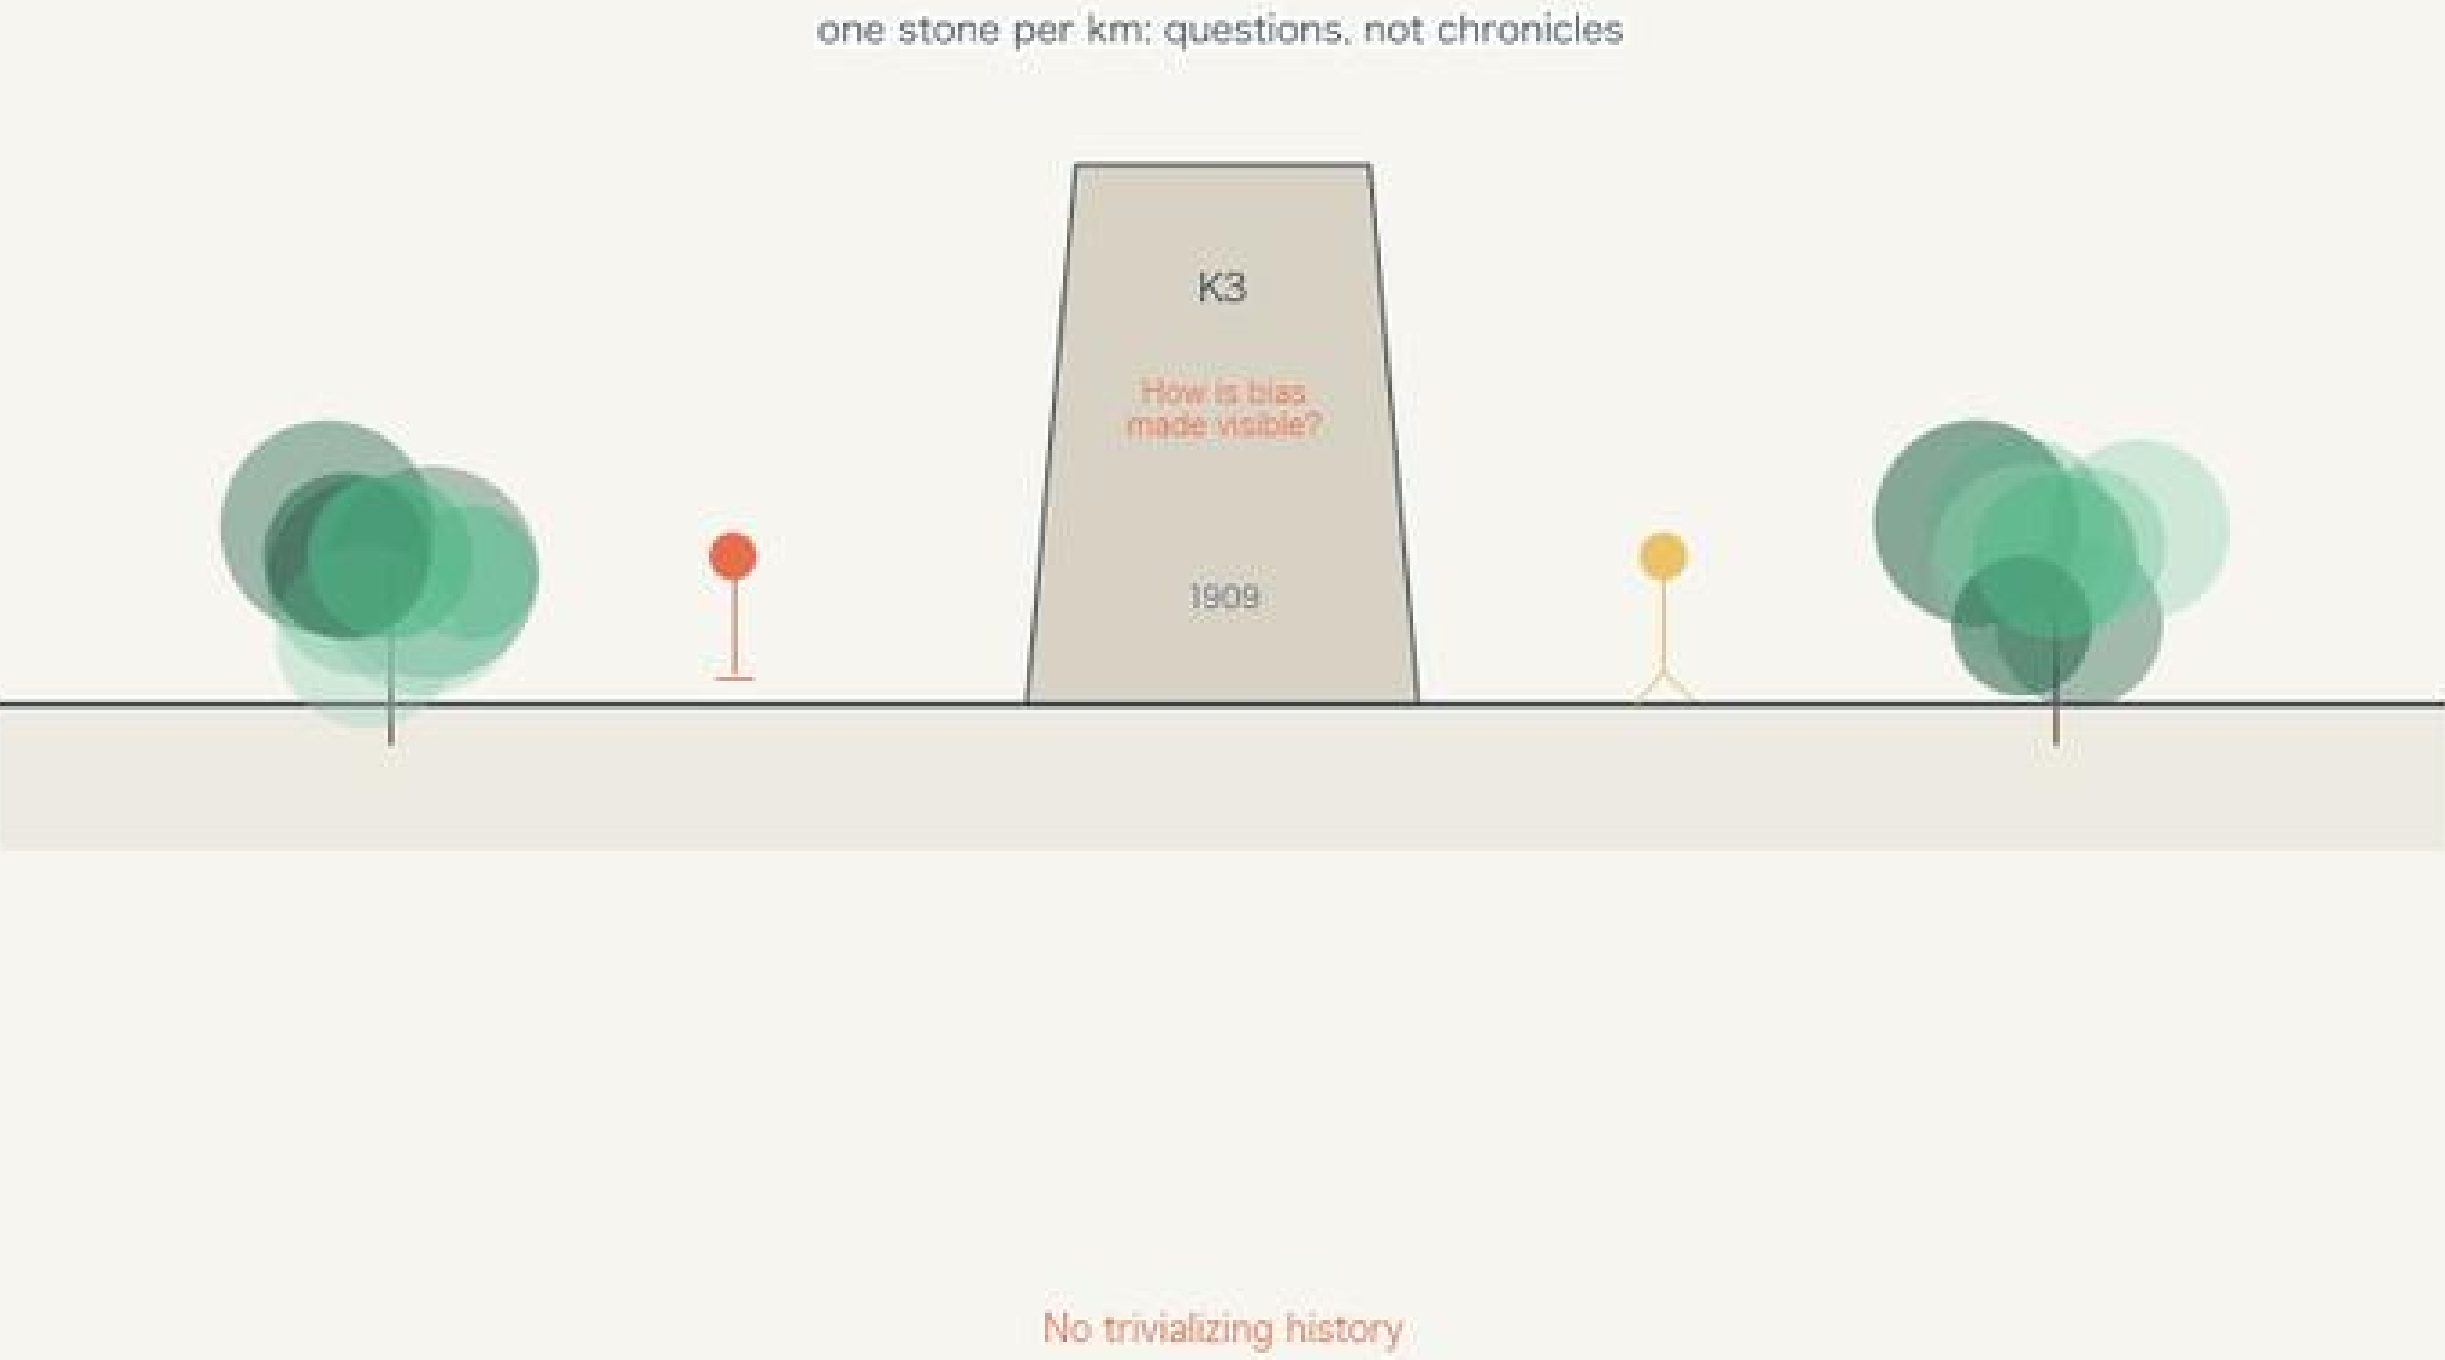

Section • archaeology trench

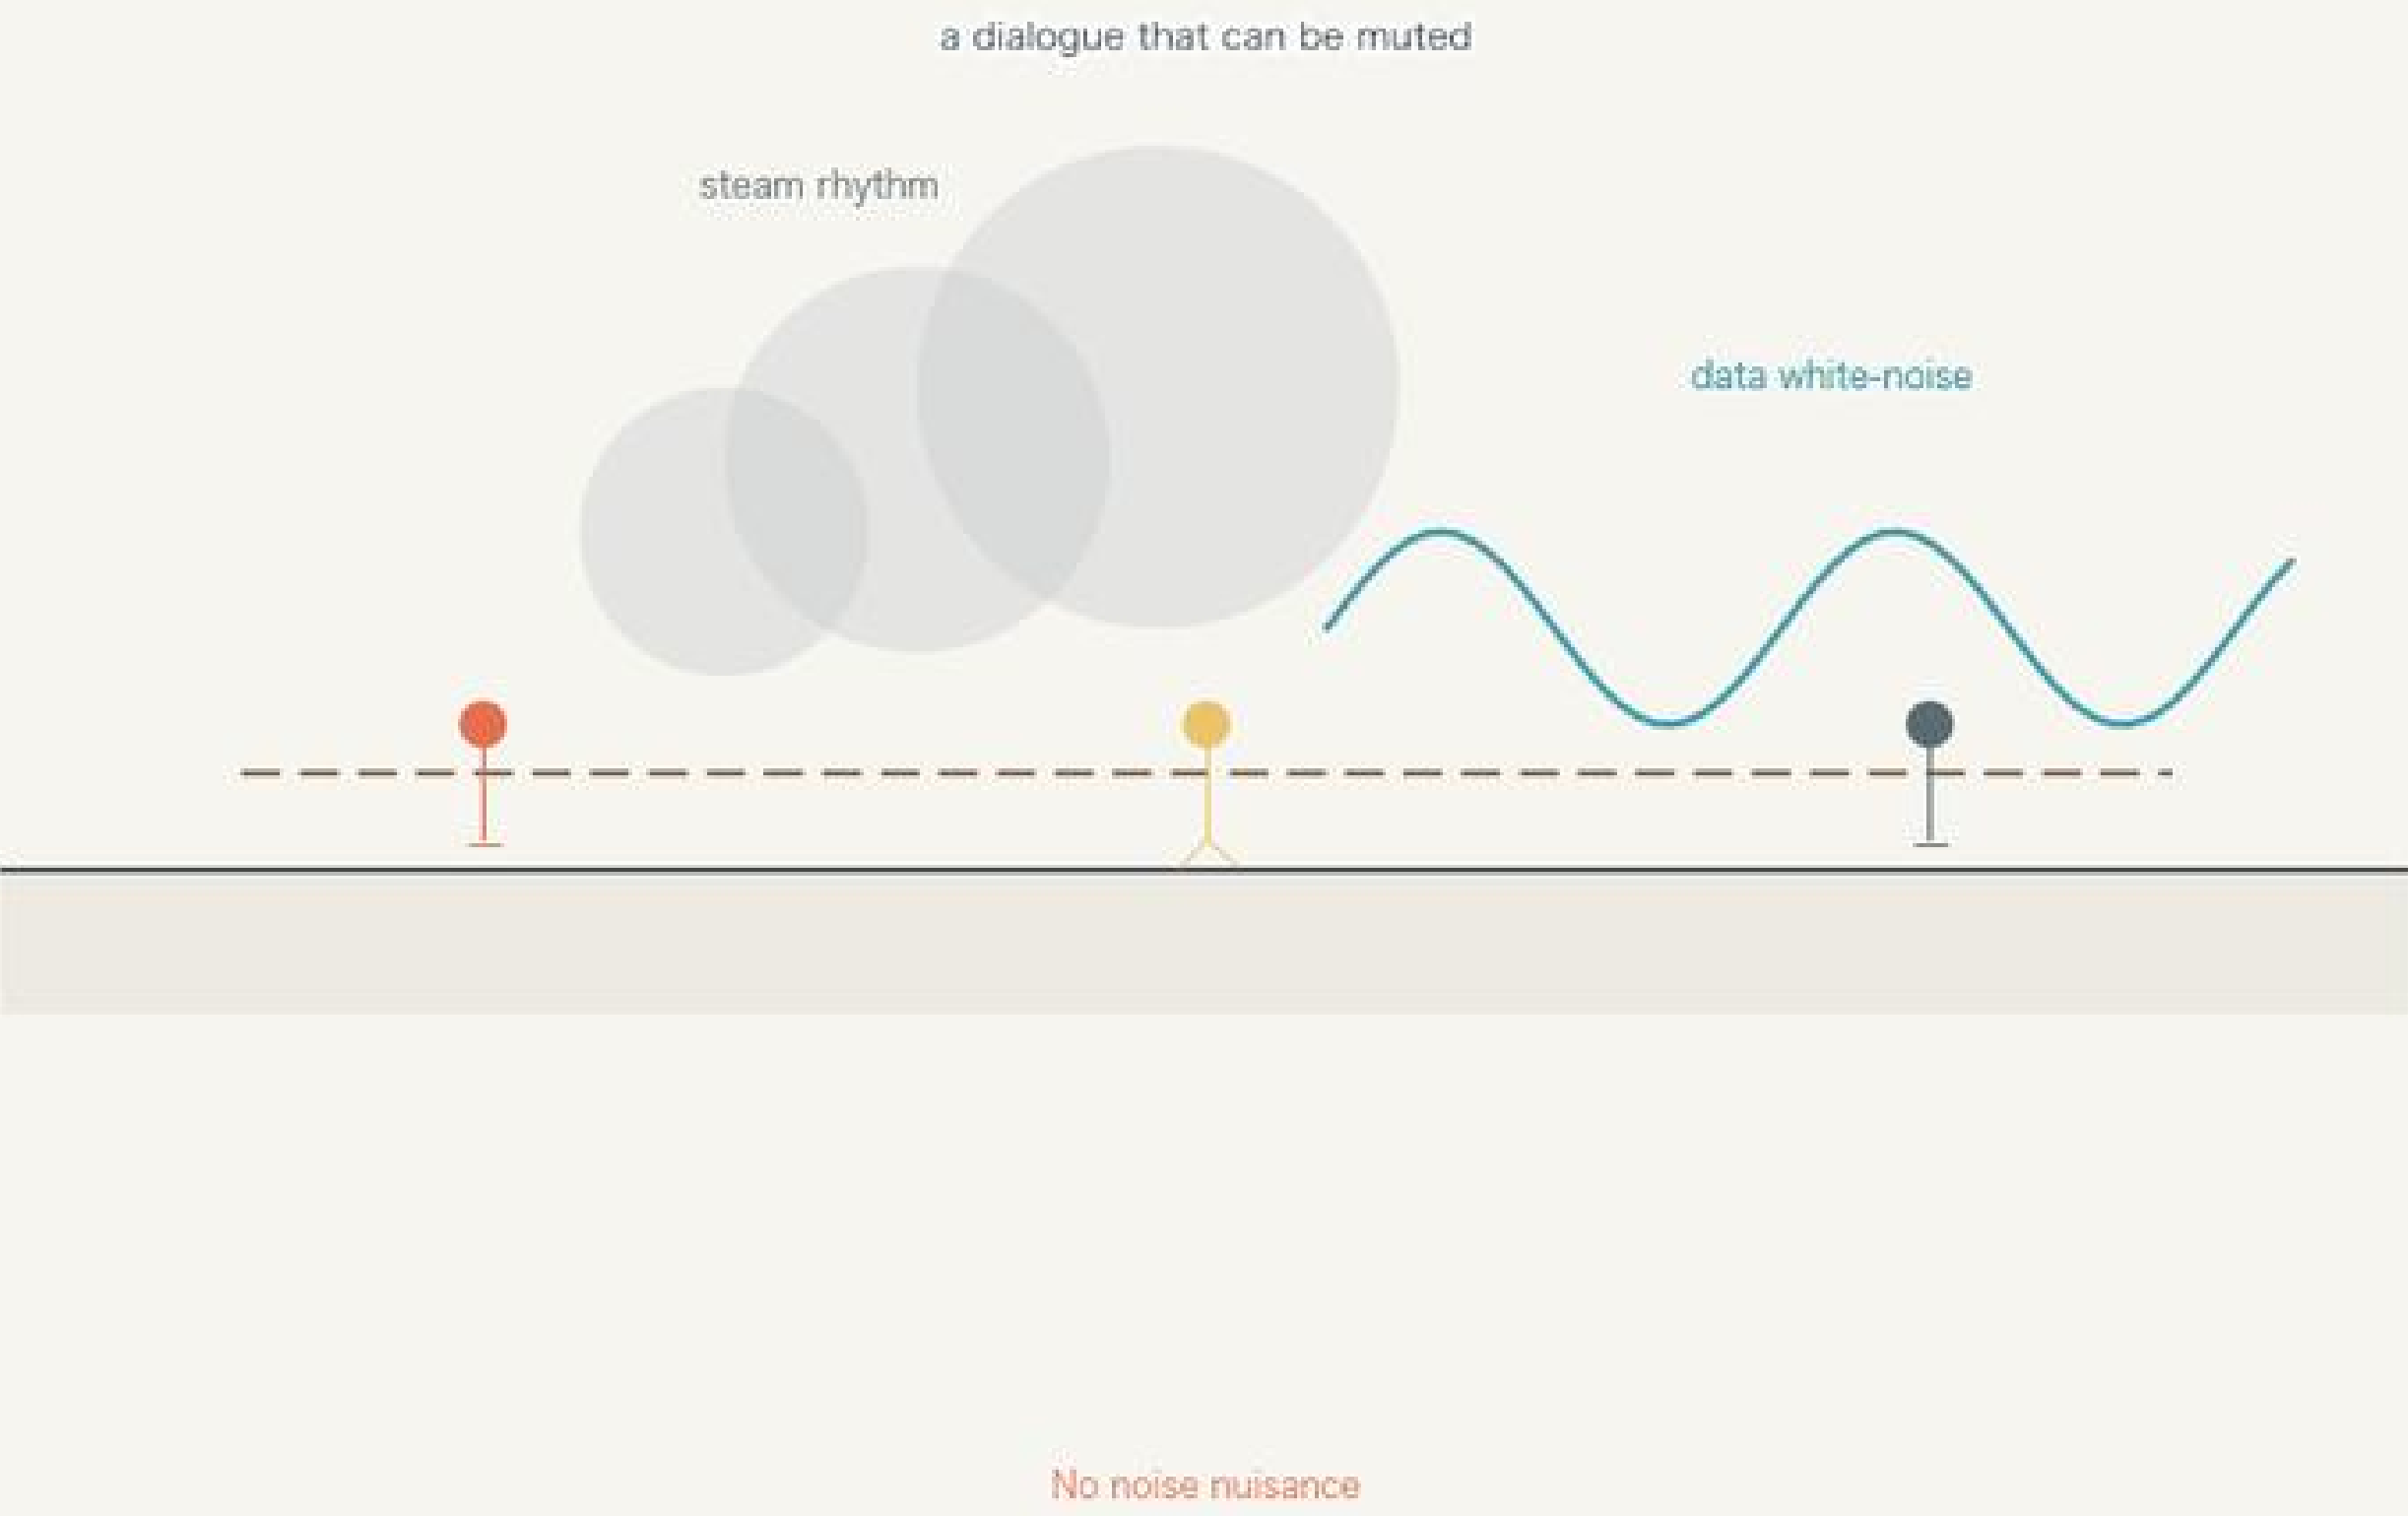

Furniture • rails reused

Narrative • question stones

Sound • steam × white-noise

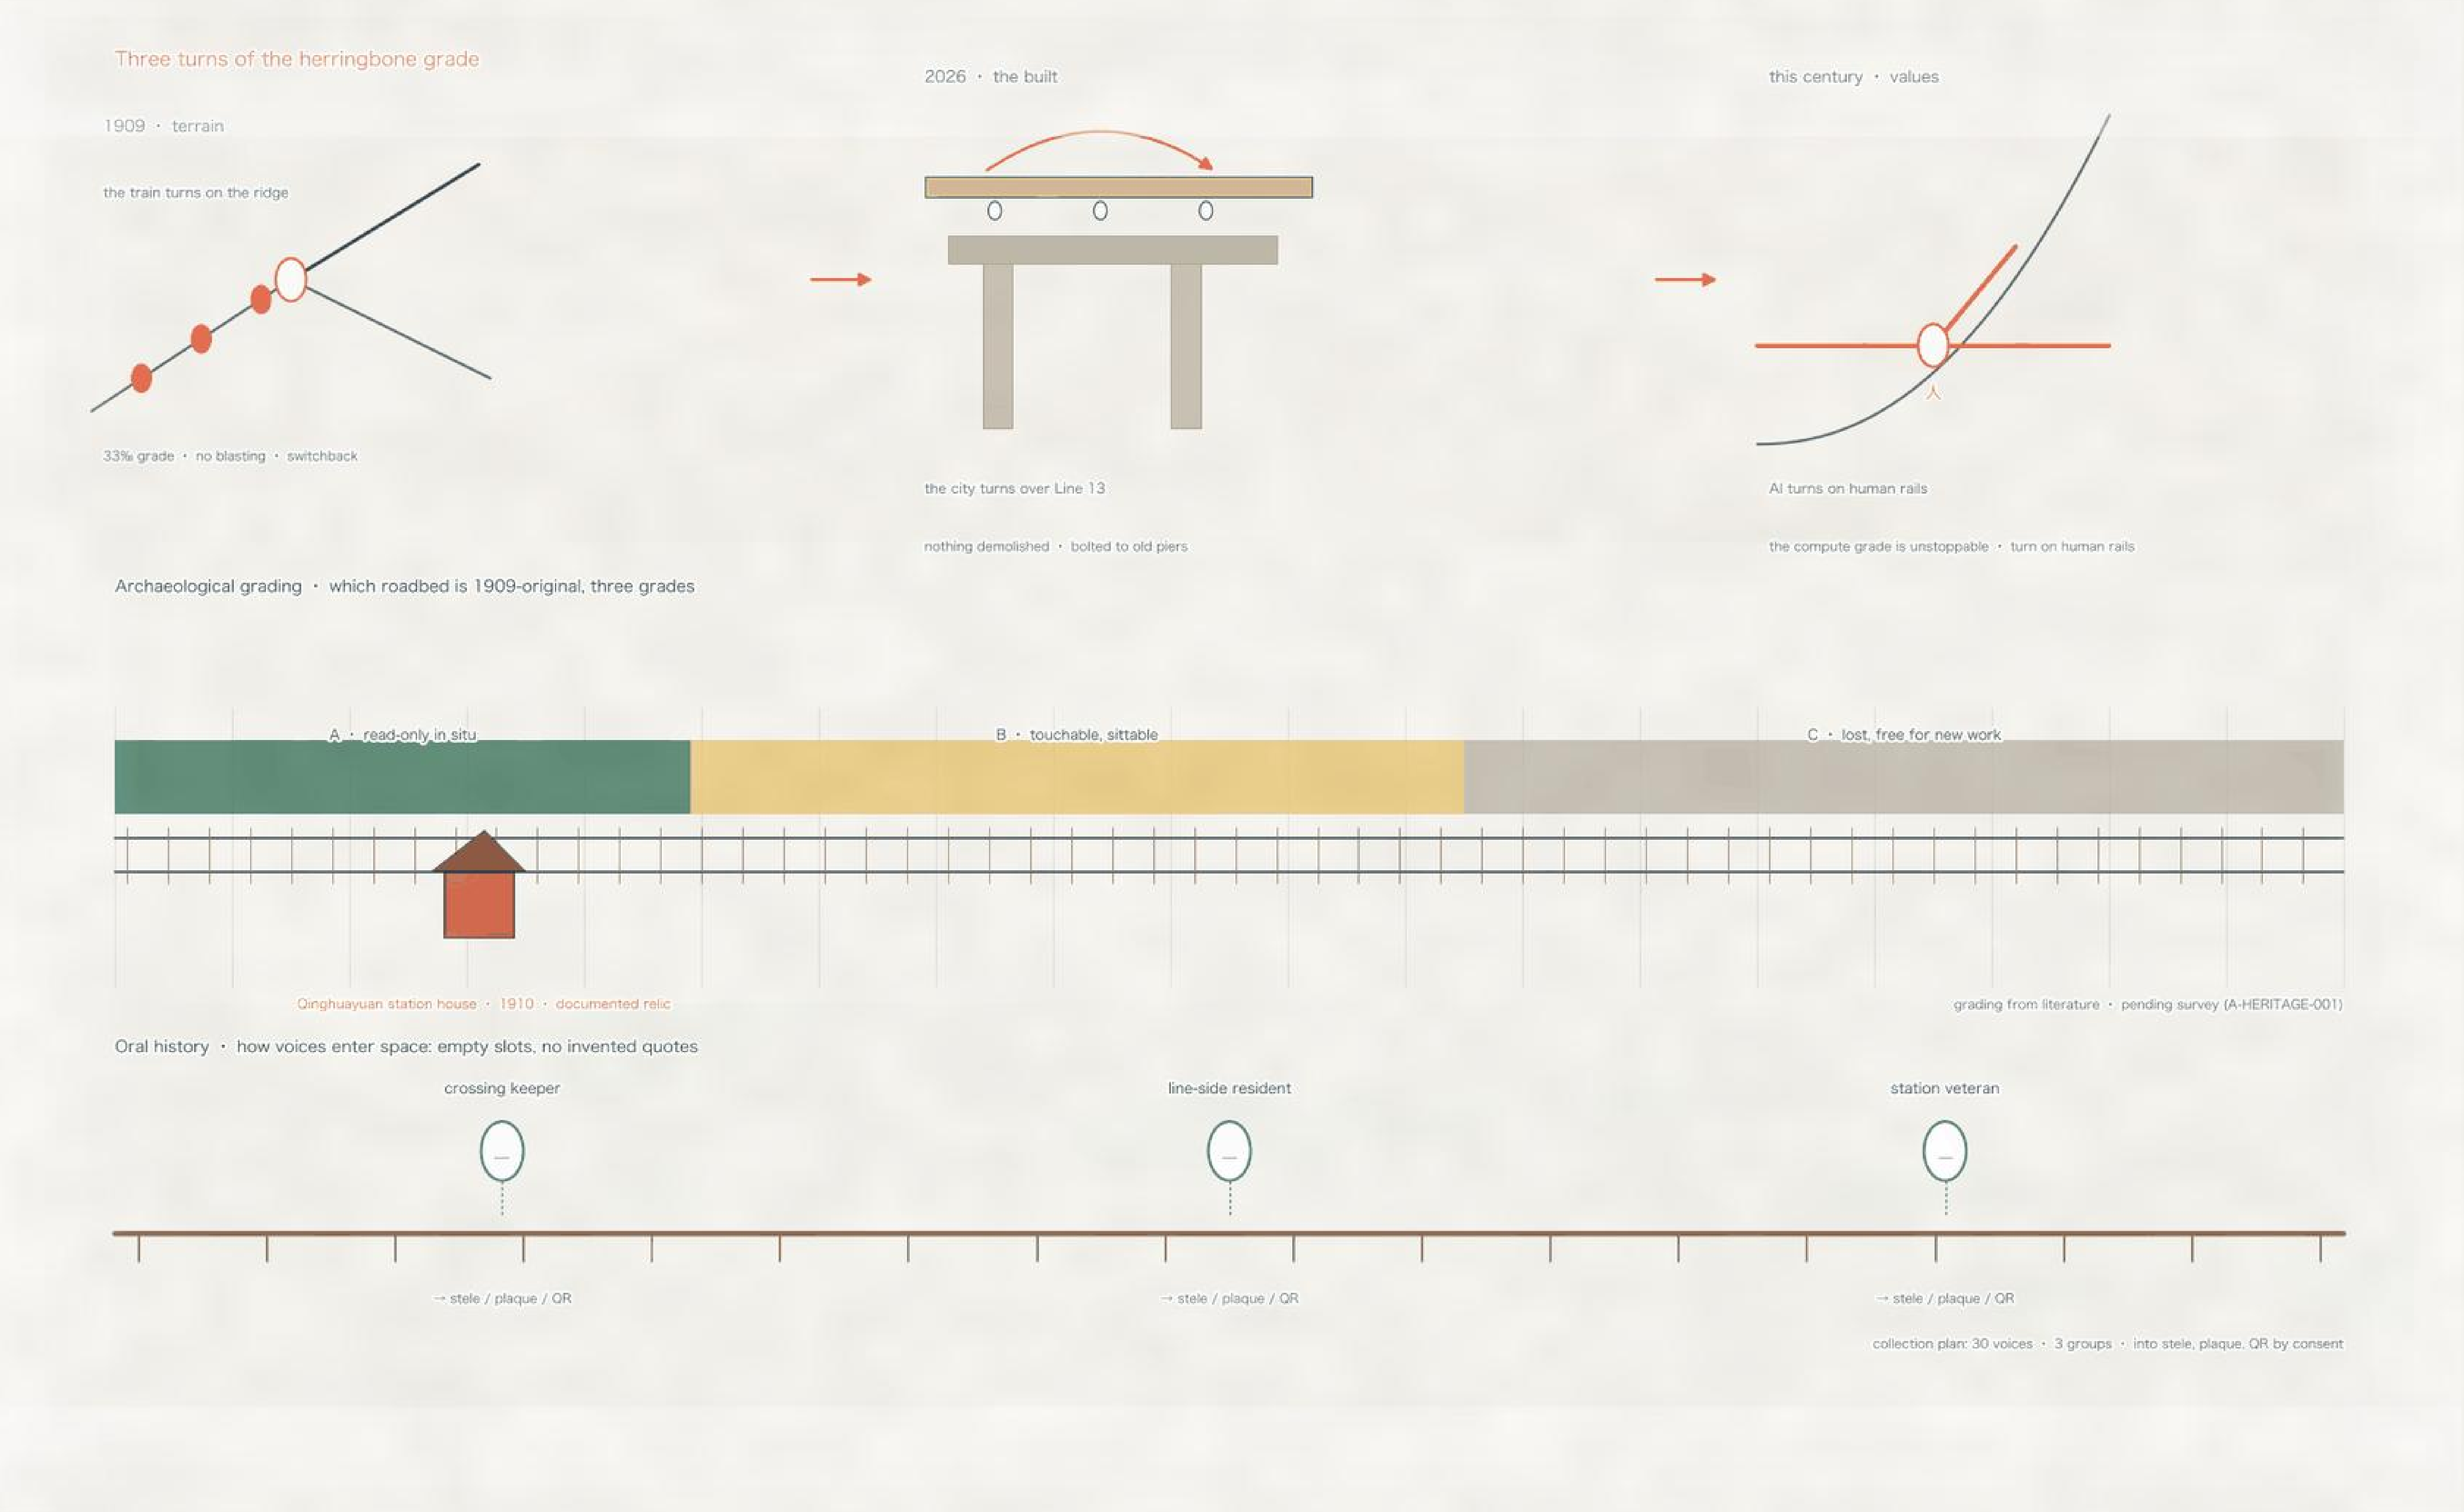

Three rules before entering the library

- ① Reuse only after clearance & safety testing
- ② Versioned via Inherit: join / exit / inherit
- ③ Sound & inscriptions pilot after permit & review

All five share one ground: rails stay in the street.

Heritage made soulful: grading • voices • rails of humanity

From preserving heritage to continuing Jing-Zhang | 3 grades × 3 voices × 3 turns | A-HERITAGE-001 framework

以人为轨

Rails of humanity

In 1909, the 「人」

drew the line's shape.

In this century, it names

whom the line belongs to.

Railway anatomy → today

switchback = Verify / Exit gates

safety siding = Failure Case Library

test track = governance sandbox

rail = human values, not compute

Each in its place

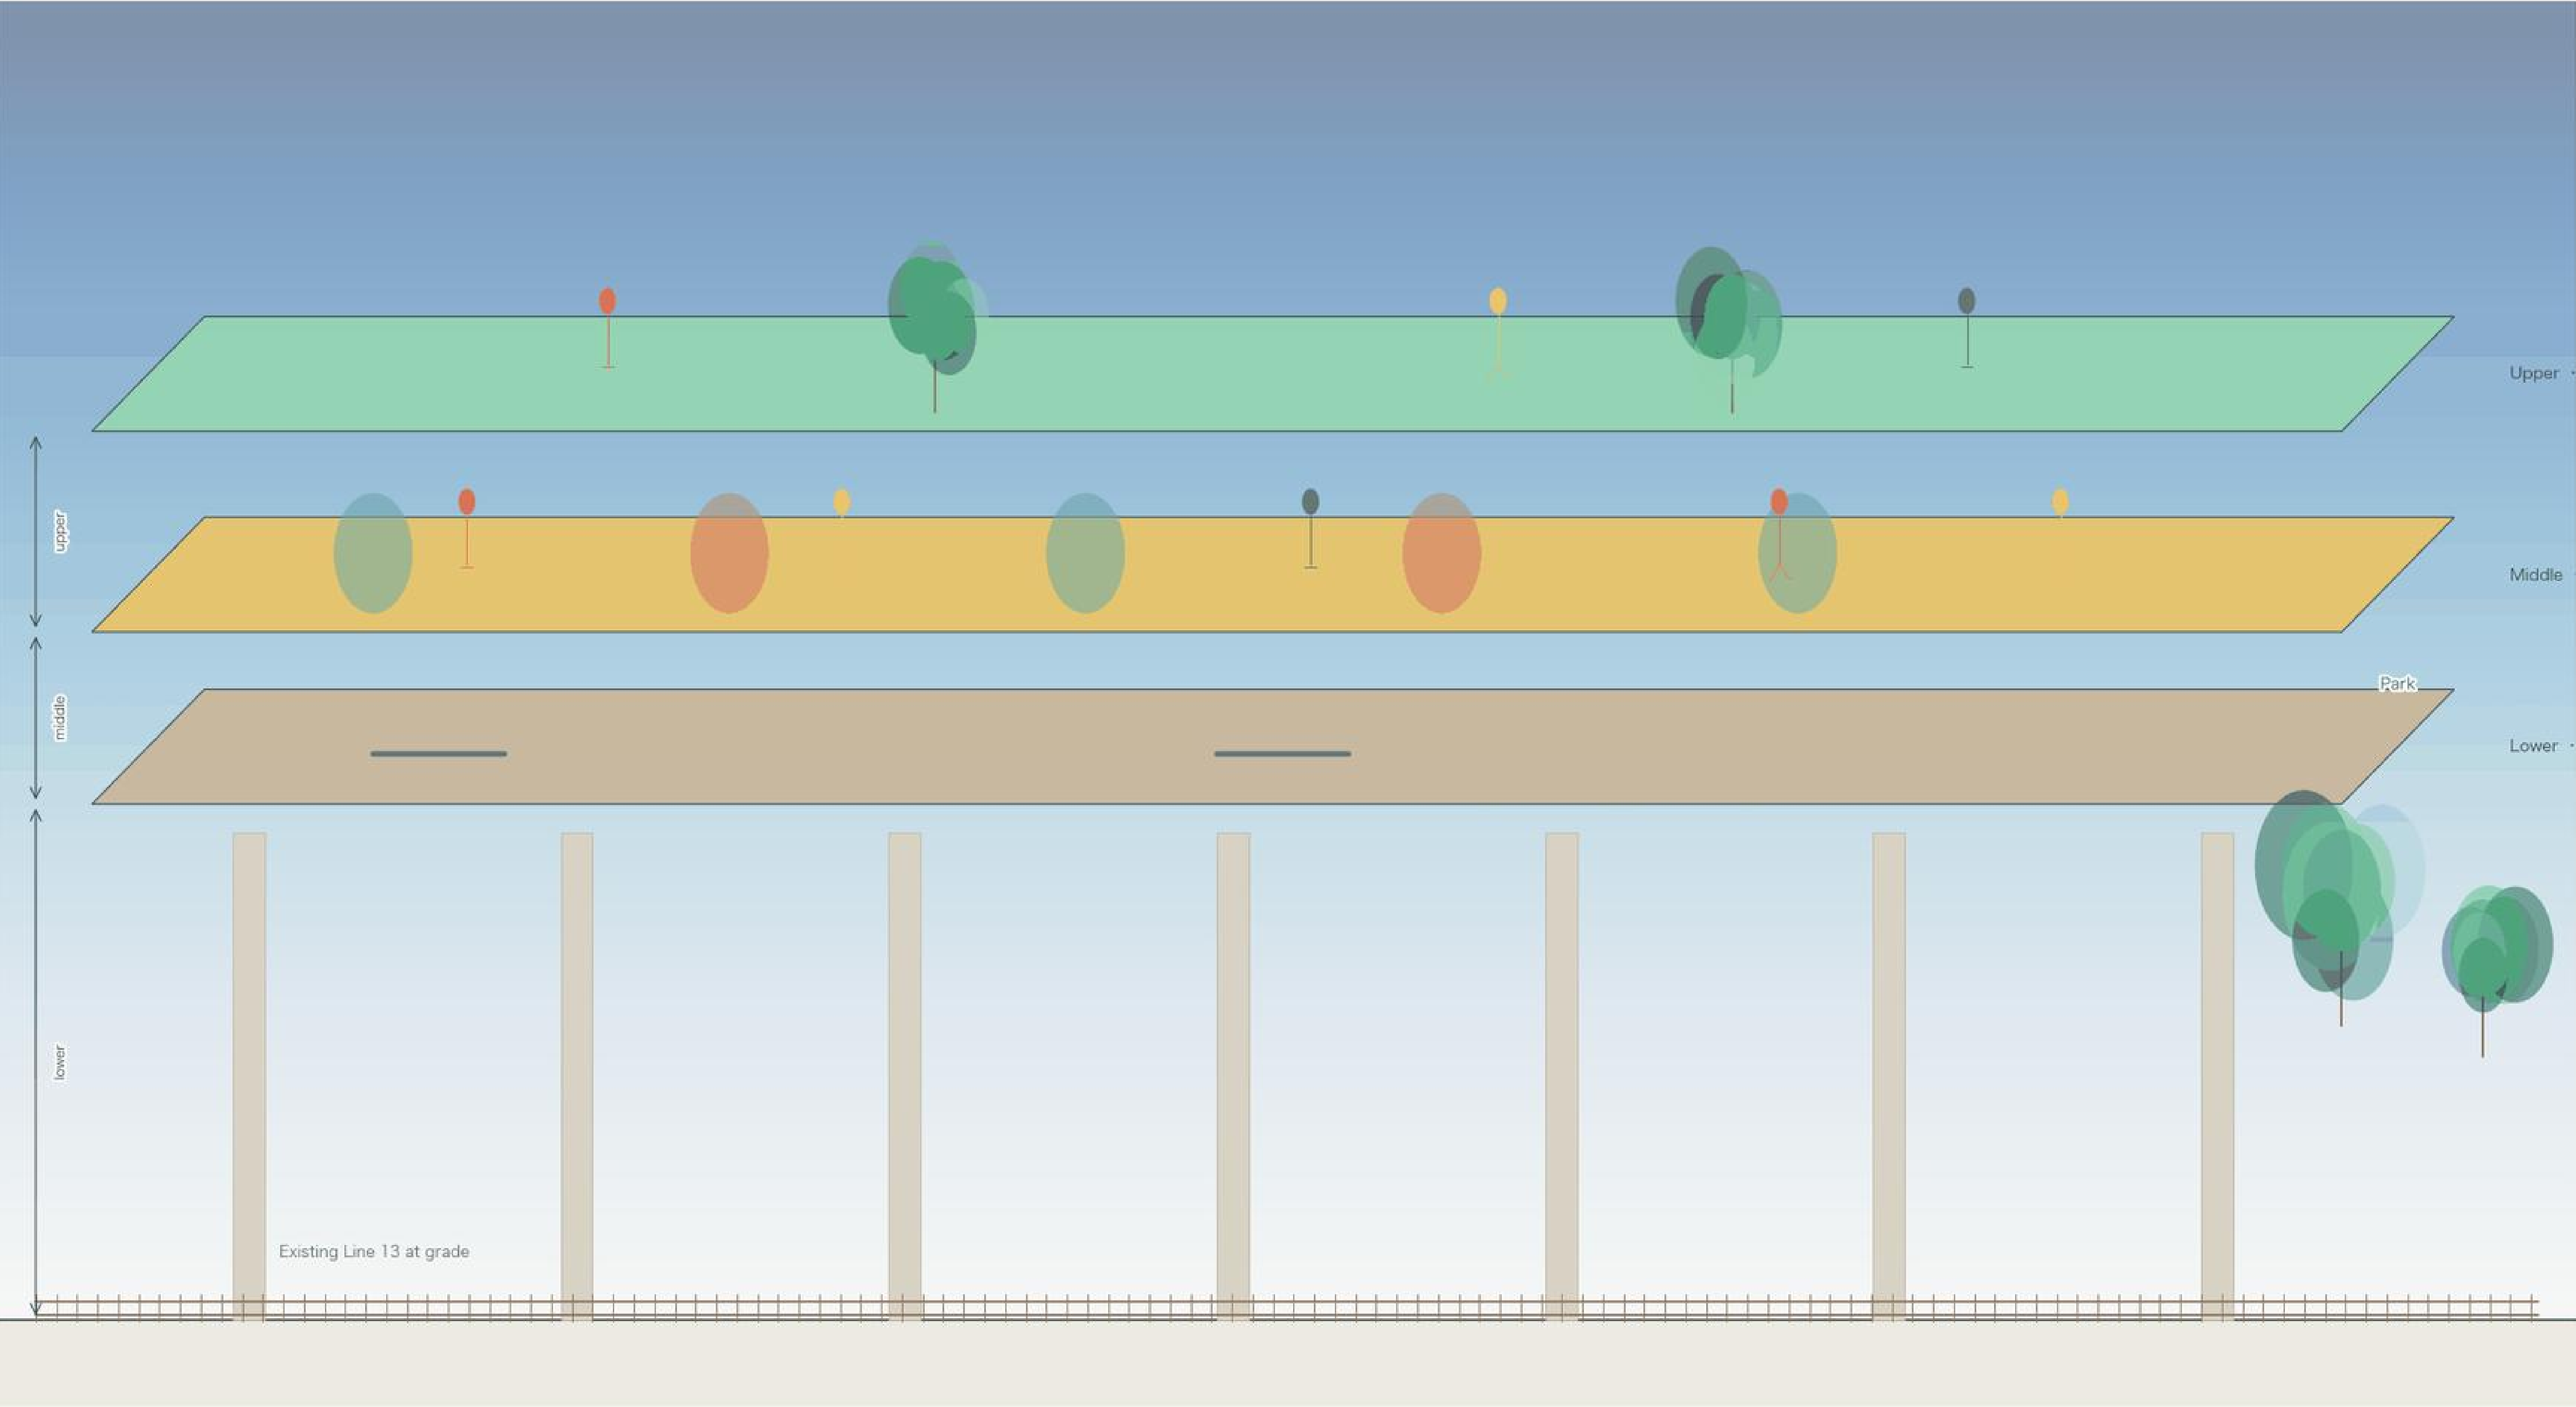

grading • for the fabric

voices • for the people

the turn • for the century

Wudaokou stitch deck: a reversible 3-level crossing

On existing pier logic • no unproven tunnels • pending red-line confirmation (concept, not construction)

OL-07 • pending red-line confirmation • concept, not for construction

Wudaokou stitch deck: the boldest move drawn as credible everyday life

Section-perspective • material / level / real people • hand edges keep concept honest | OL-07
