

Why Jing-Zhang: The Openline 100

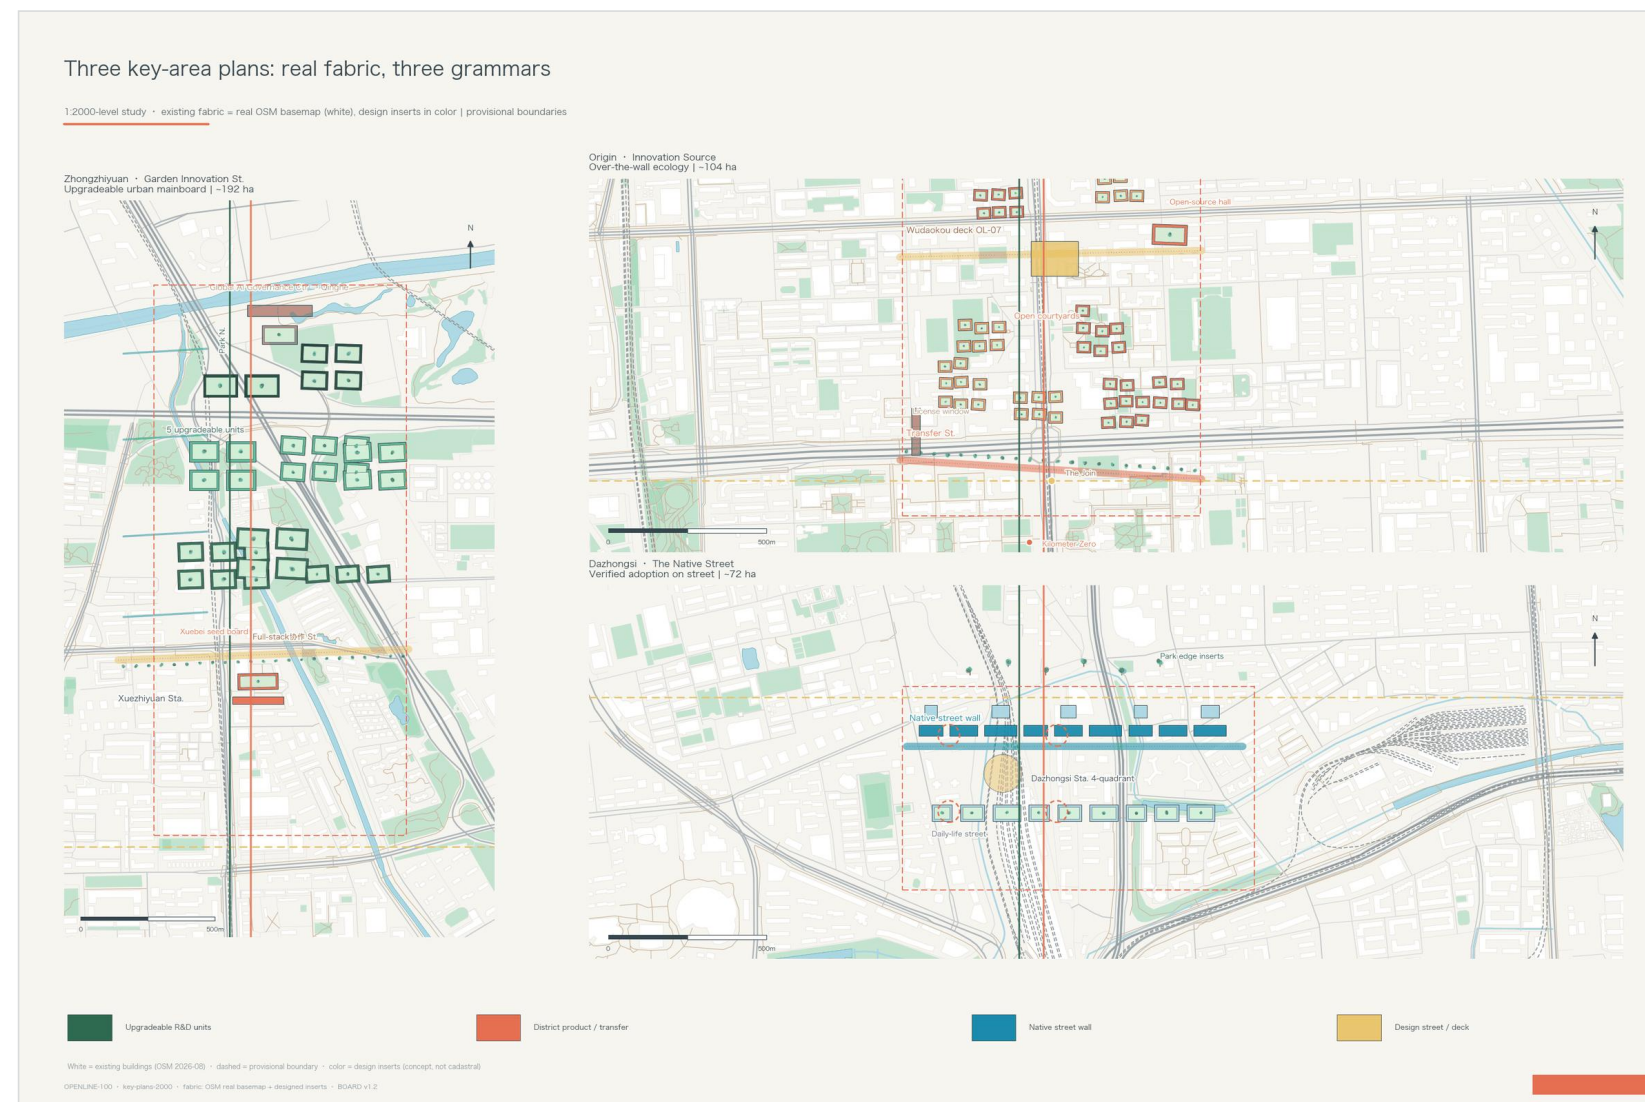

Urban design proposal for the Haidian Jingzhang heritage corridor • A3 plate book

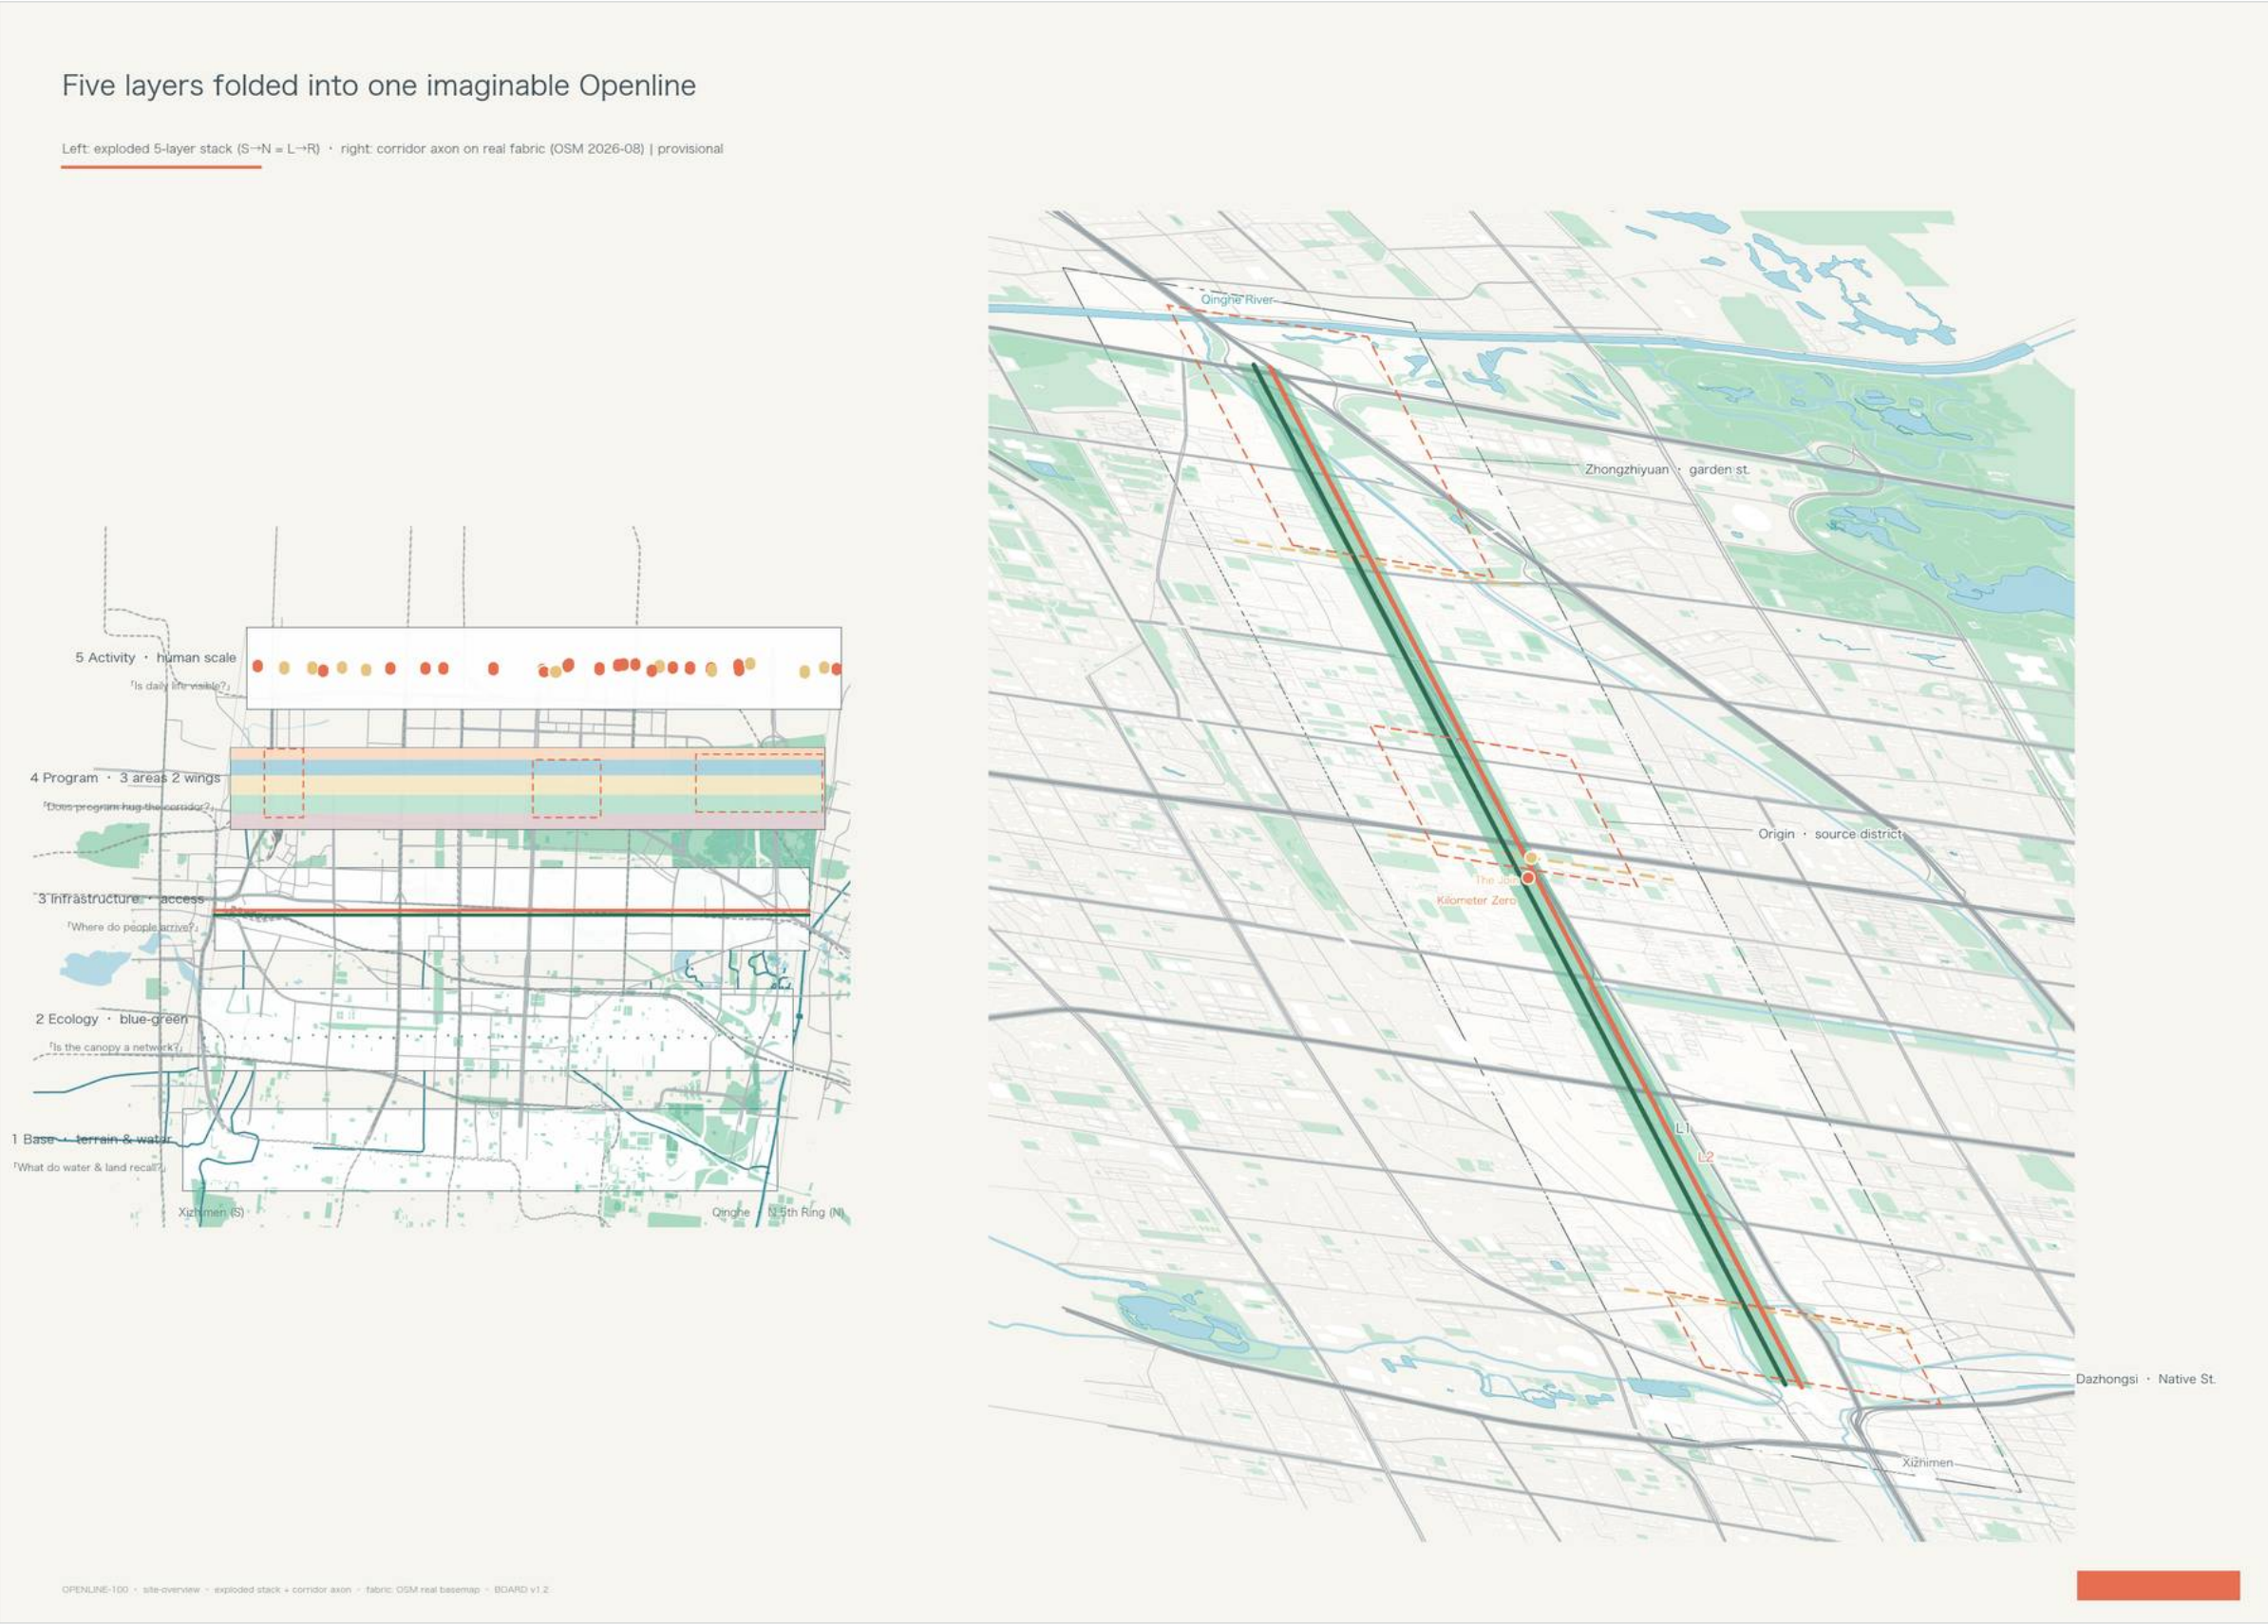

This book collects 24 plates, all re-rendered on real OSM urban fabric and proposal geometry.

The full narrative lives in [proposal.md](#) / [proposal.en.md](#) and [report/proposal.html](#).

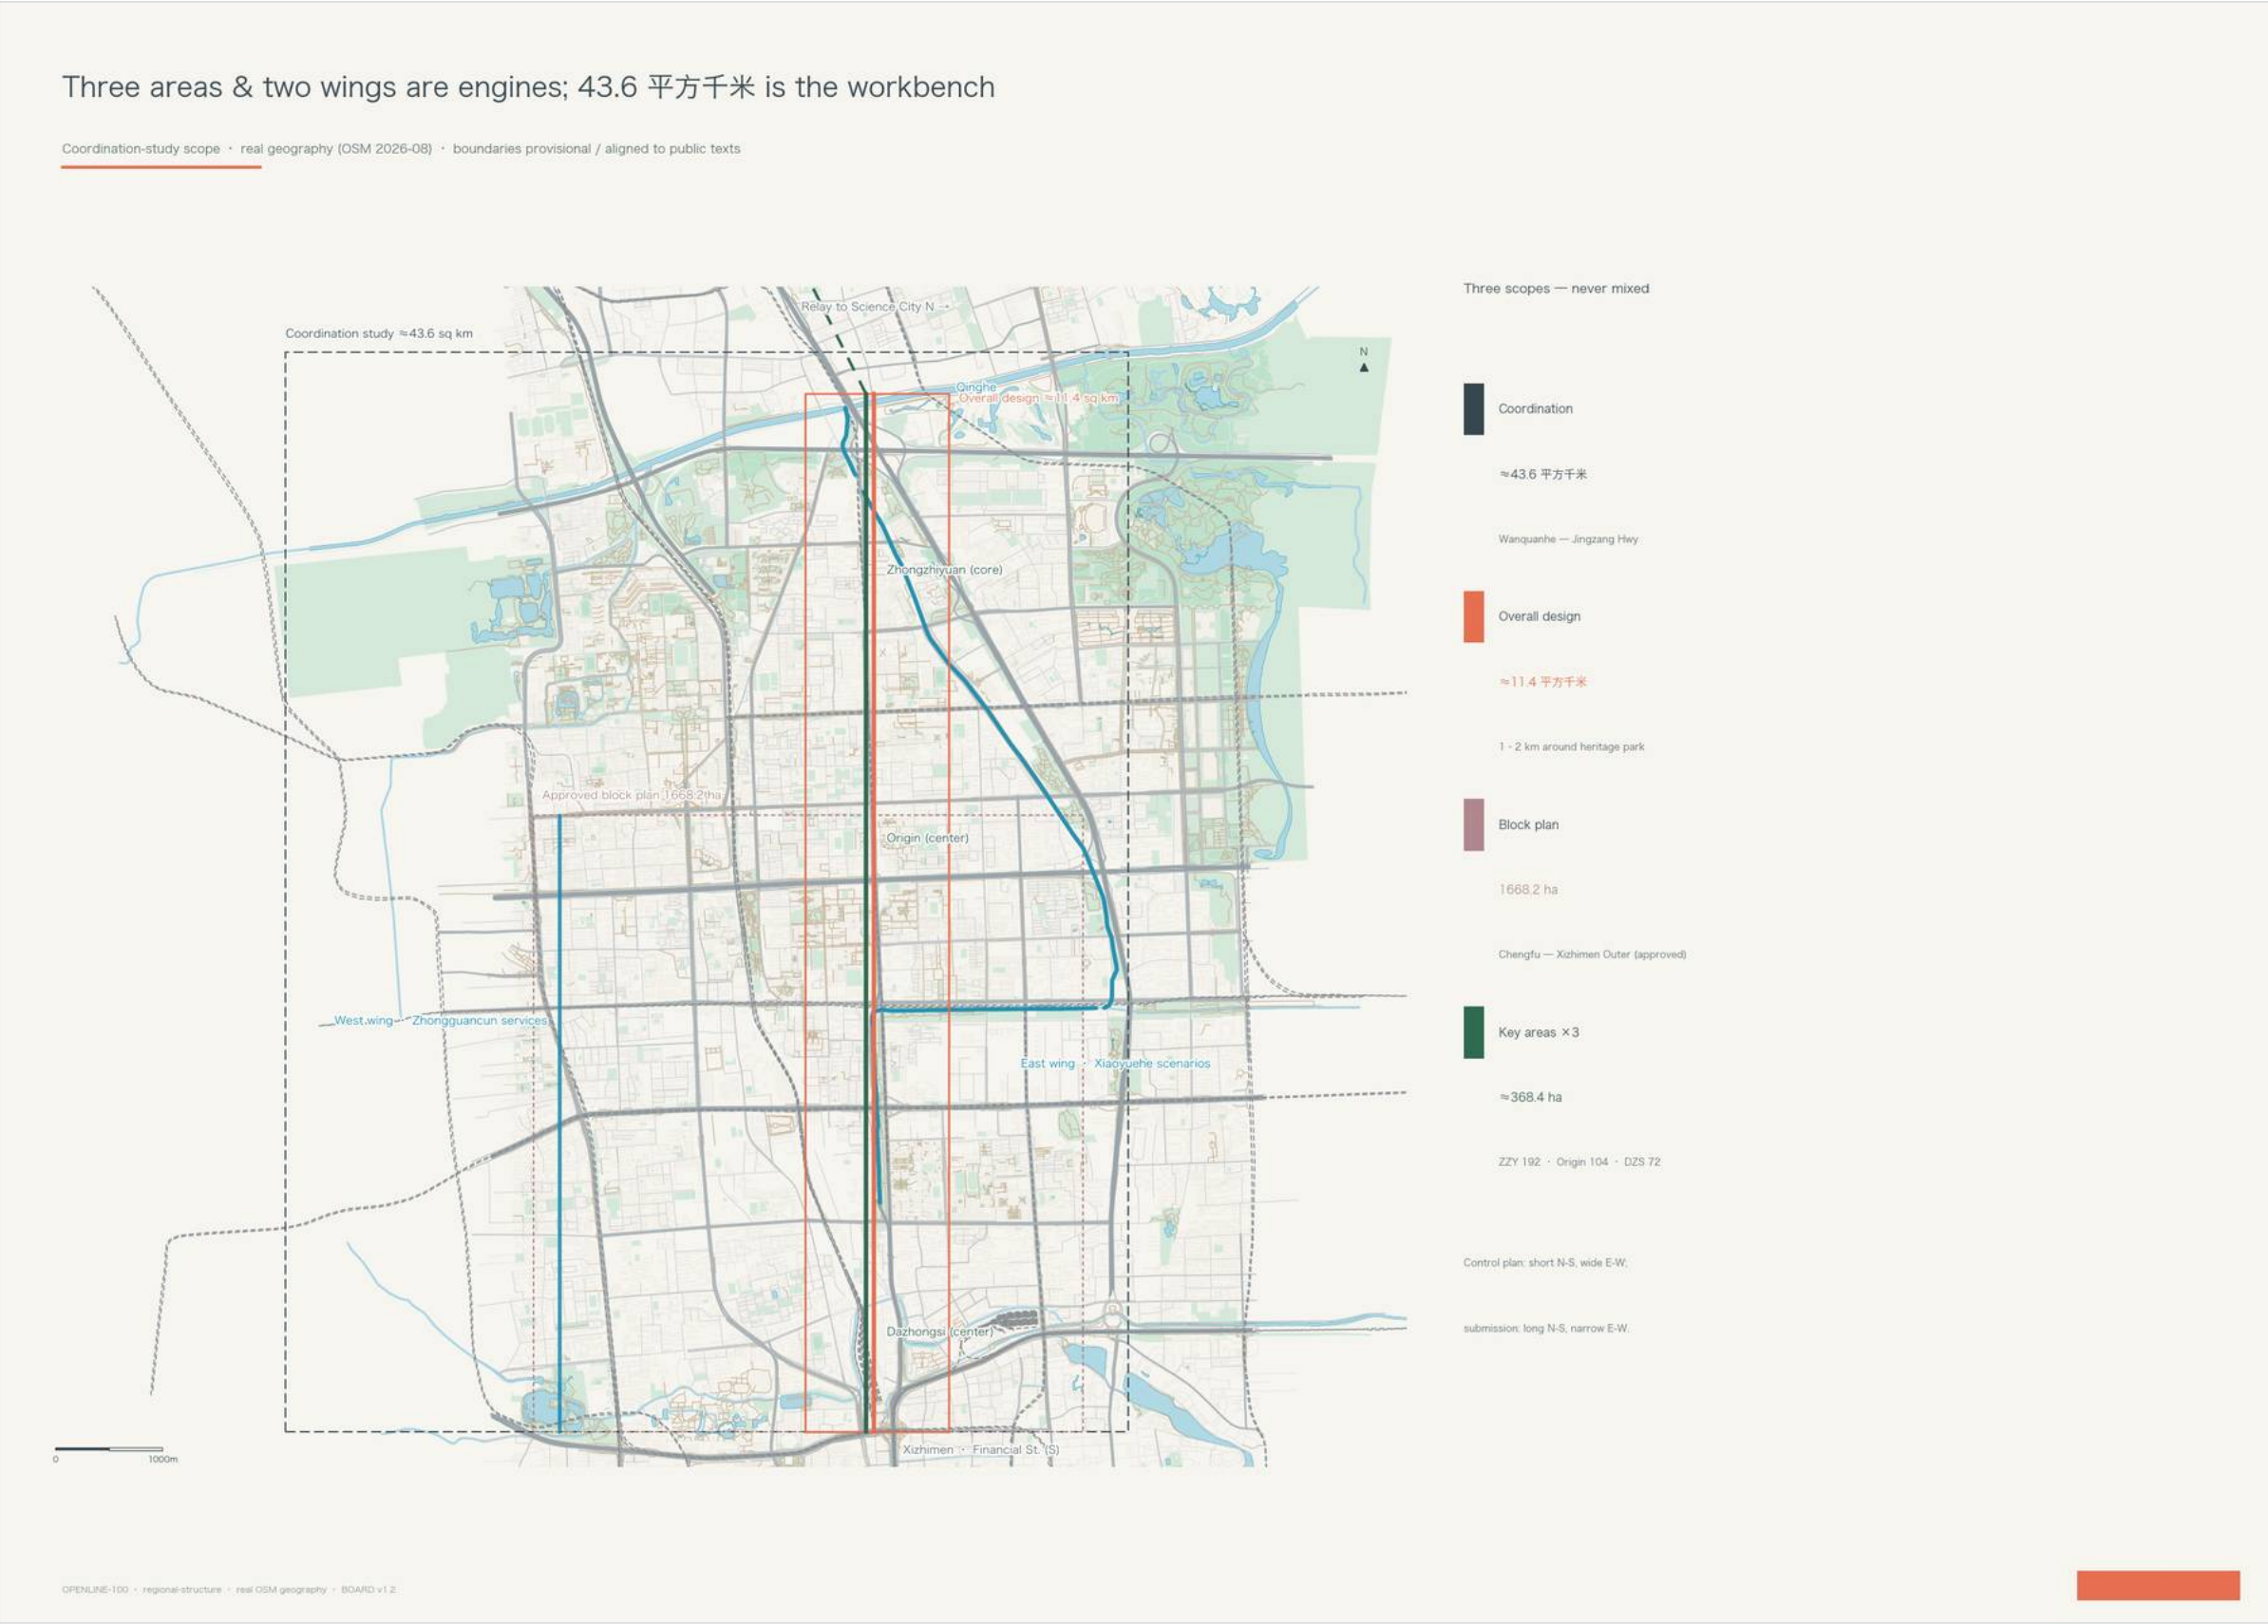

Graphic standard: Sasaki v1.2 (palette / type scale / scale bars / north arrows / title blocks).

Openline 100 Studio • kenshin-ai-101 • 2026-08 • v1.2

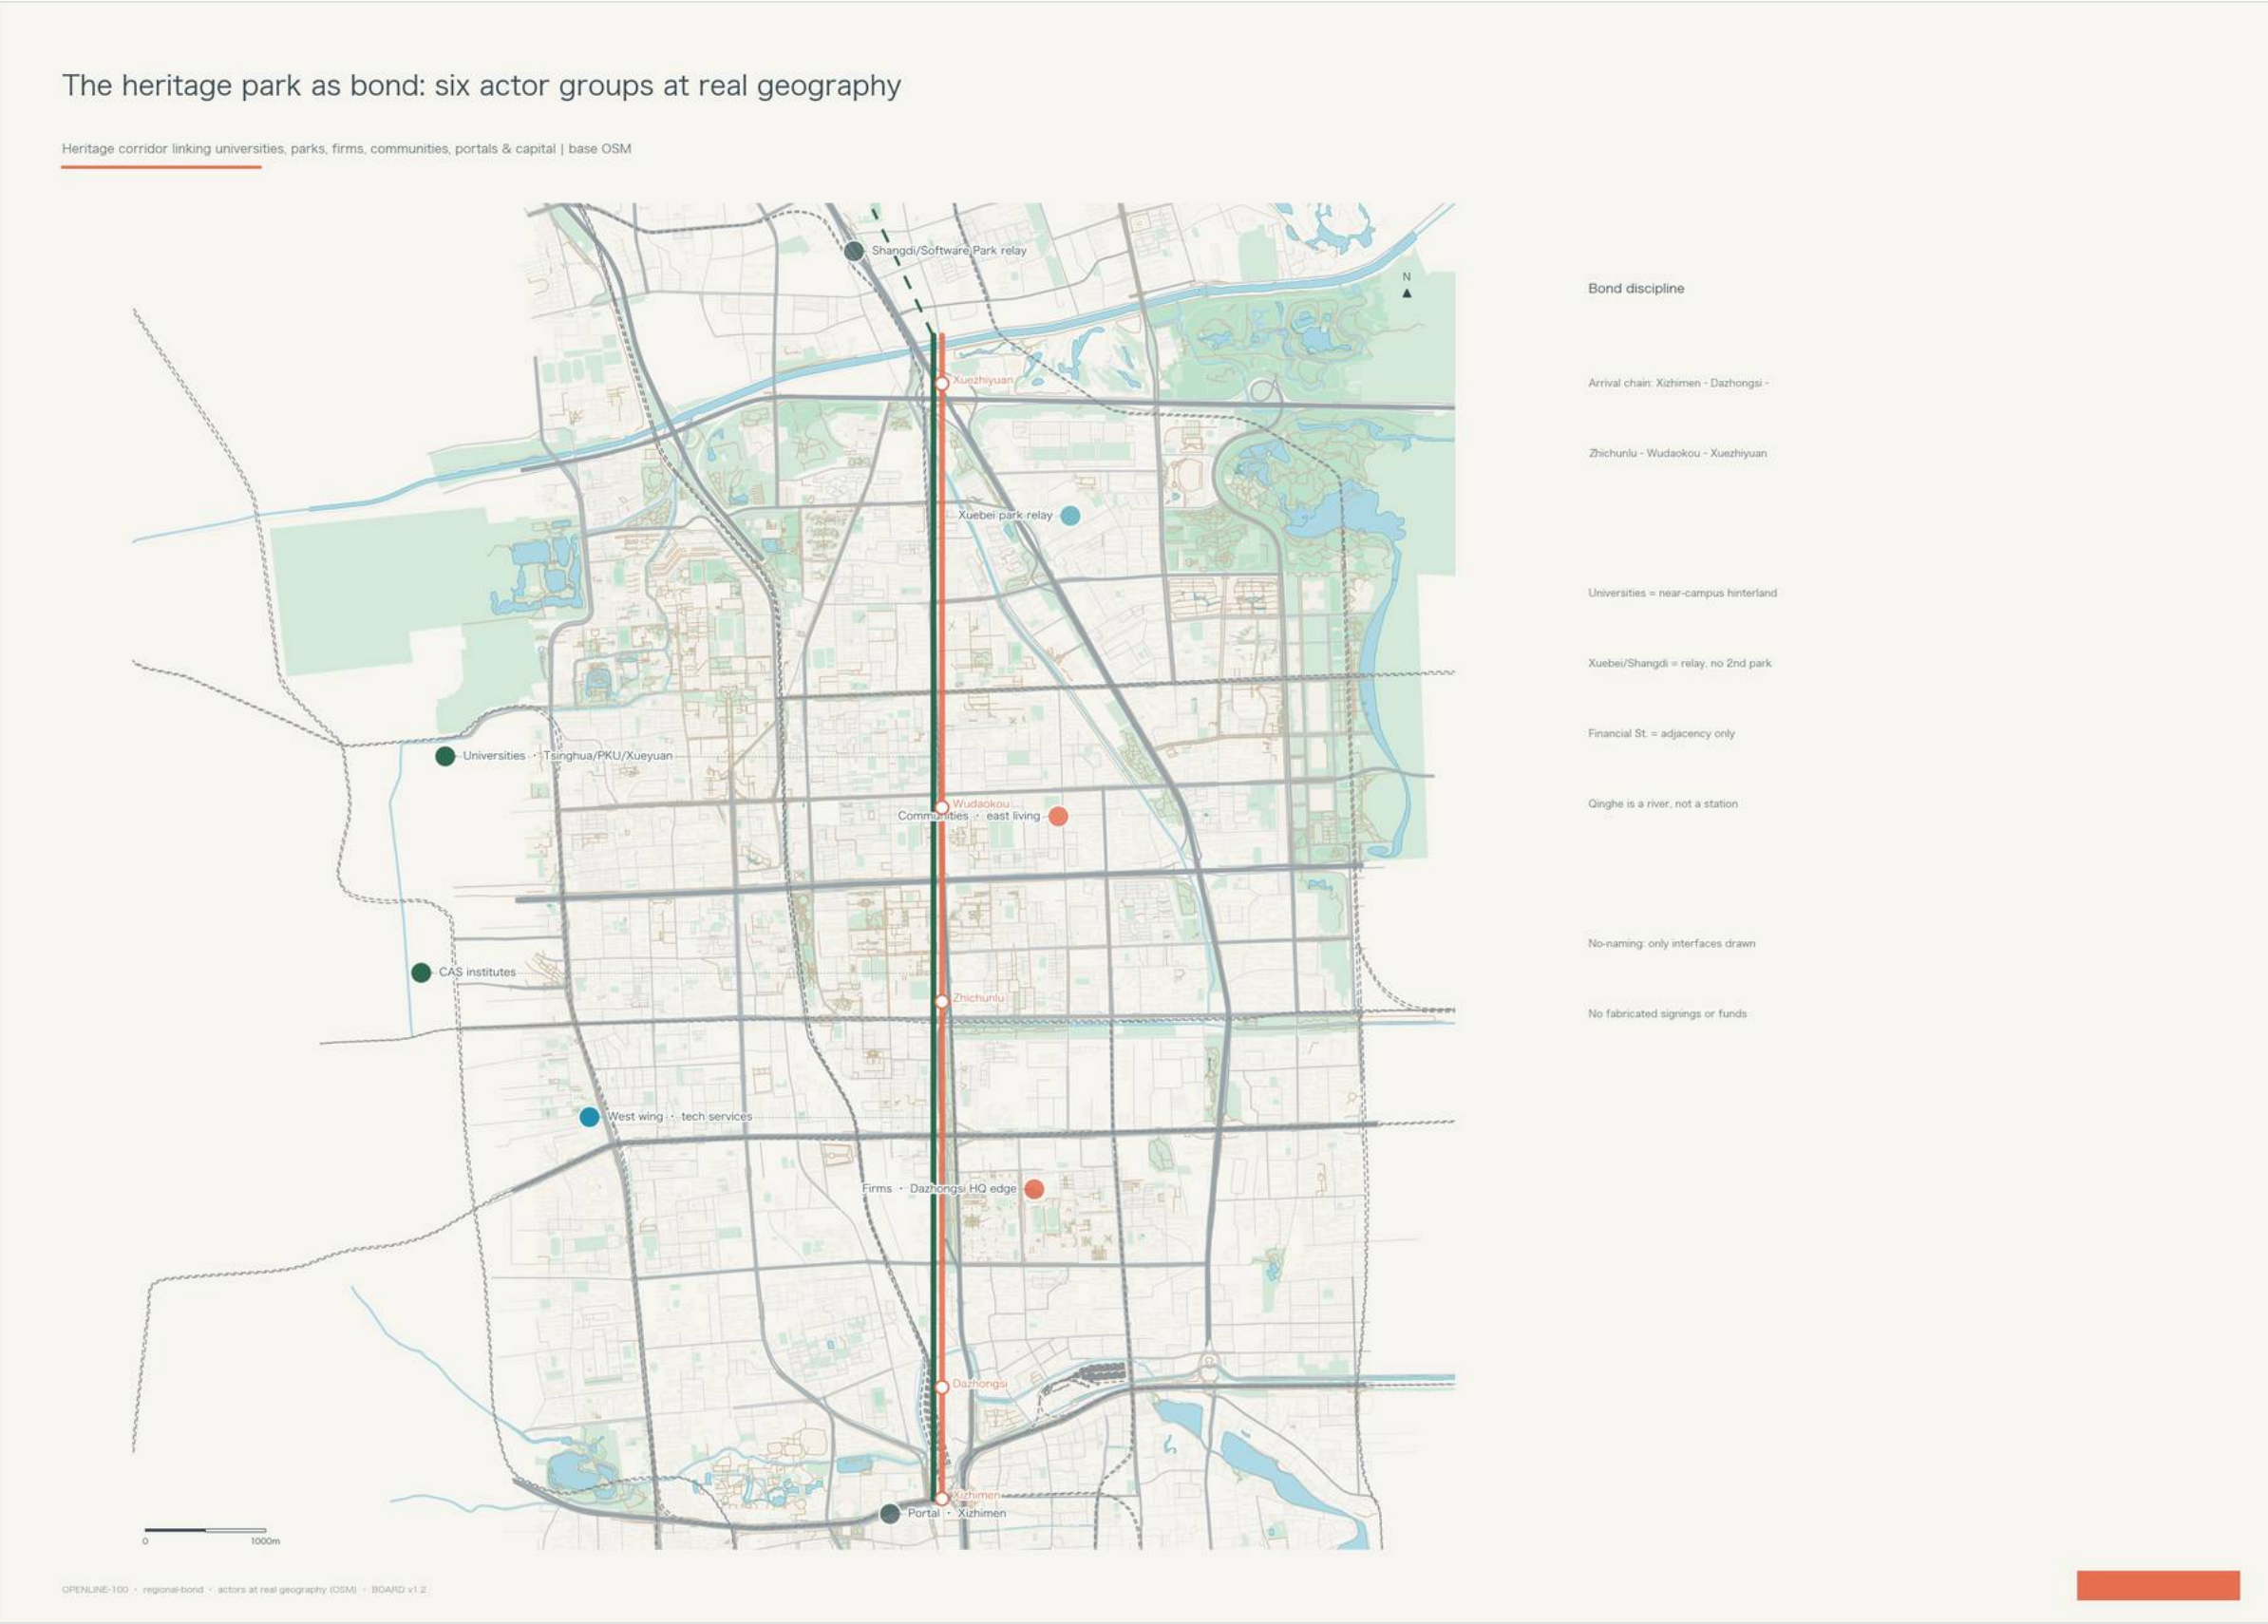

01 Site overview: five-layer structure and corridor axonometric

02 Regional structure: the corridor in northwest Beijing

03 Regional bond: university, innovation and cultural ties

04 Land use and structure: one spine, three cores, five segments

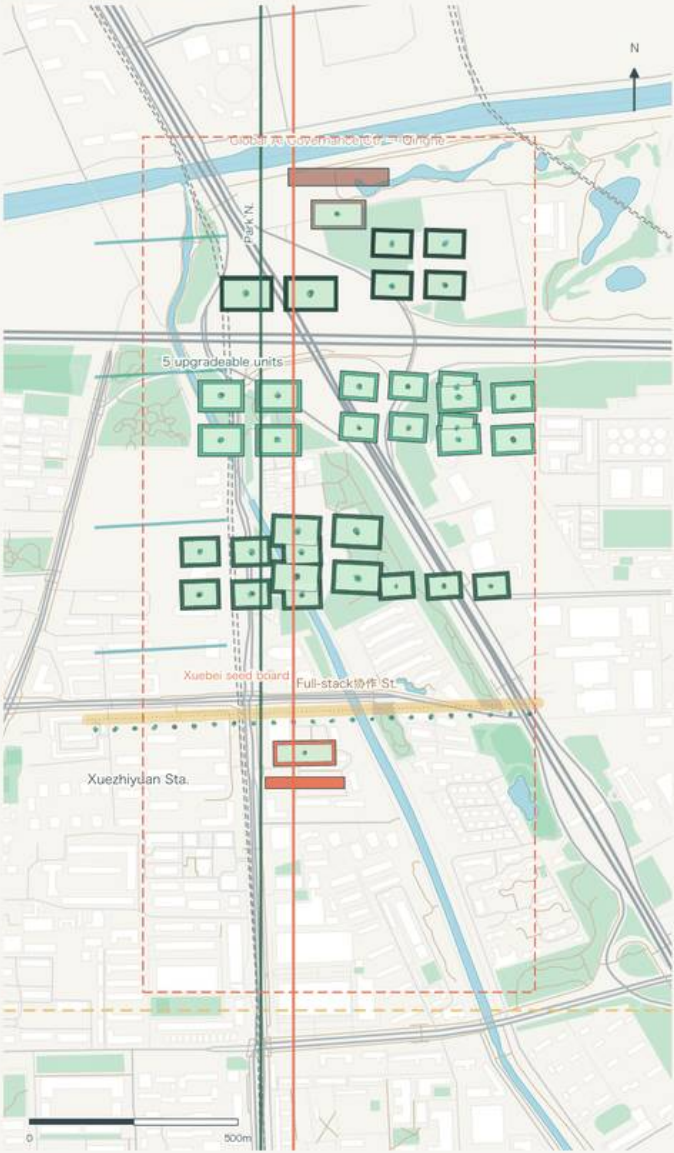

05 Three key areas: Co-Wisdom Garden, Origin, Dazhongsi

Three key-area plans: real fabric, three grammars

1:2000-level study • existing fabric = real OSM basemap (white), design inserts in color | provisional boundaries

Zhongzhiyuan • Garden Innovation St.
Upgradeable urban mainboard | ~192 ha

Origin • Innovation Source
Over-the-wall ecology | ~104 ha

Dazhongsi • The Native Street
Verified adoption on street | ~72 ha

Upgradeable R&D units

District product / transfer

Native street wall

Design street / deck

White = existing buildings (OSM 2025-08) • dashed = provisional boundary • color = design inserts (concept, not cadastral)

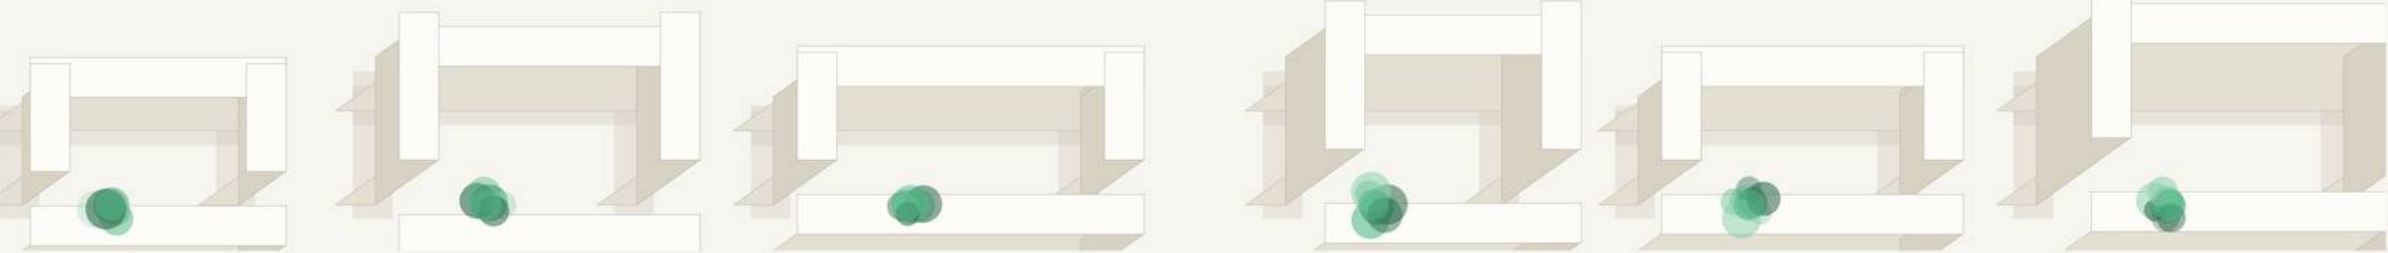

OPENLINE-100 • key-plans-2000 • fabric: OSM real basemap • designed inserts • BOARD v1.2

06 1:2000 key-area masterplans on real OSM urban fabric

Massing follows the block; the skyline grows no towers

Top: white-model axons per area (concept heights) · bottom: S→N skyline along the park

Zhongzhiyuan · 18 - 36 m garden courtyards

Origin · low near campus ≤45 m (fine grain)

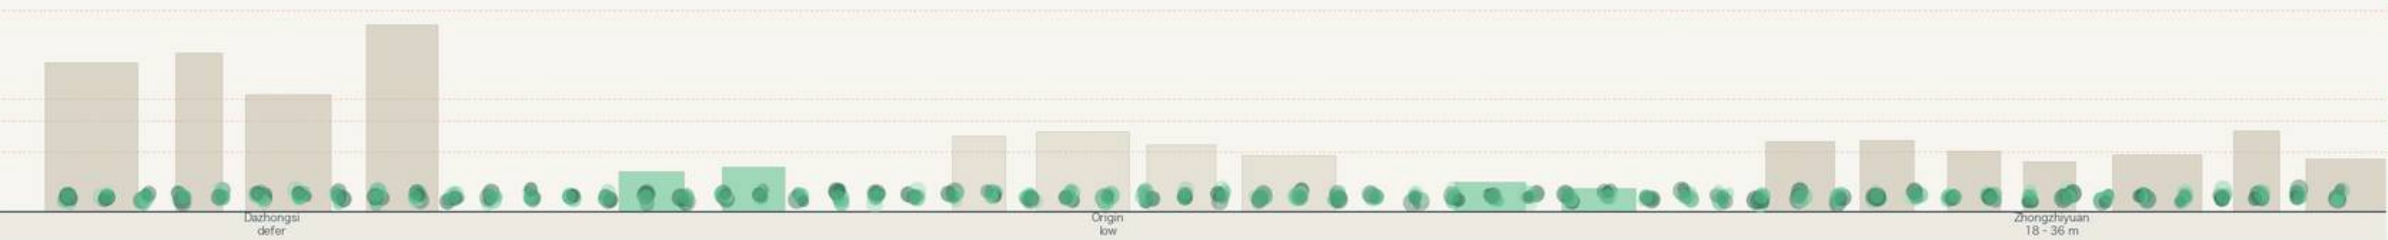

Dazhongsi · continuous 24 - 36 m wall, defers to existing HQ

Existing HQ 80 m
no new tower

Along park S → N: no new towers; canopy leads the skyline

OPENLINE-100 · key-massing-skyline · concept heights, caps yield to official parcels · BOARD v1.2

07 Massing and skyline control

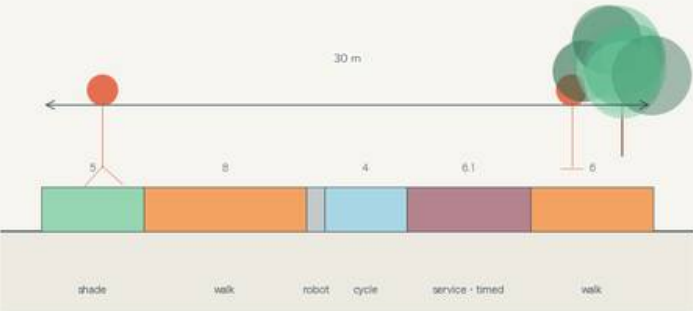

Six typical streets, one Openline grammar

Section series A - F • not engineering • walking $\geq 50\%$ at all times • robot band never becomes car lane

A • L1 Fact Line (walkable rail)

B • L2 Service Line (stations dock)

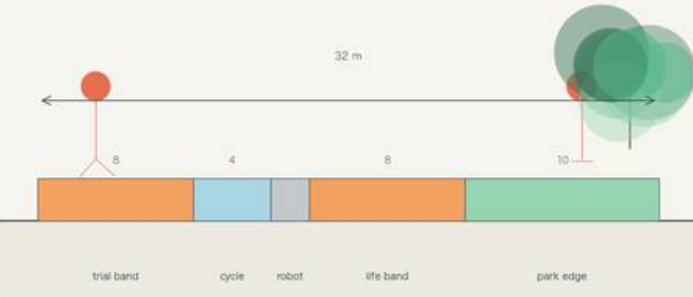

C • Collaboration St. (logistics behind)

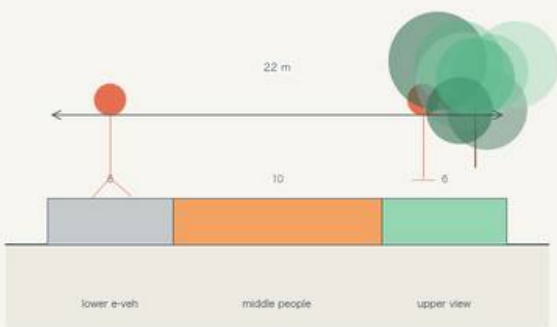

D • Transfer St. (windows on edge)

E • Native St. (trial / life split)

F • Deck (e-vehicle / people / view)

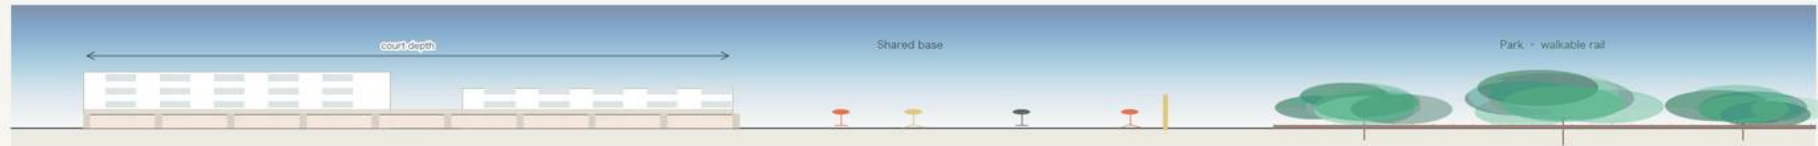

OPENLINE-100 • key-sections • walking $\geq 50\%$ always • BOARD v1.2

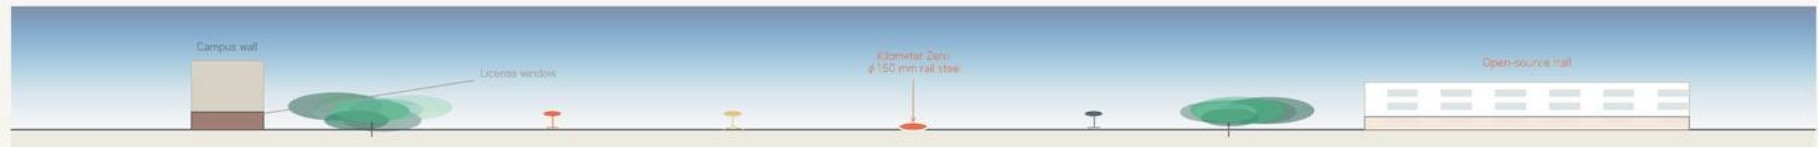

Five places — cut them open and you know them

Real place sections: courtyard / license window / deck / arrival / Qinghe edge

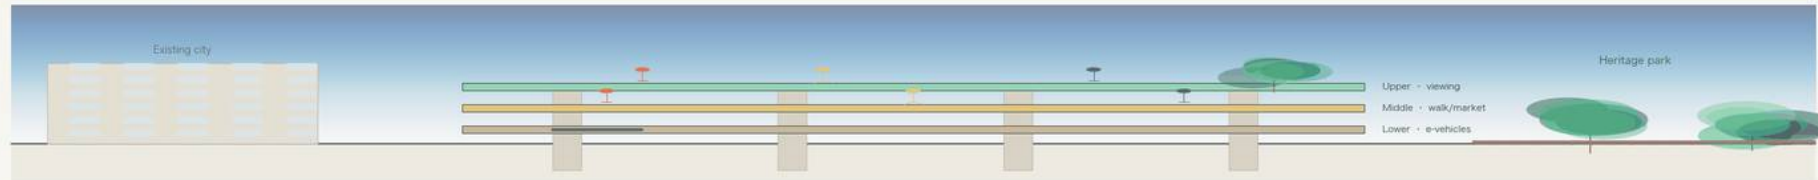

01 Zhongzhiyuan • courtyard & park

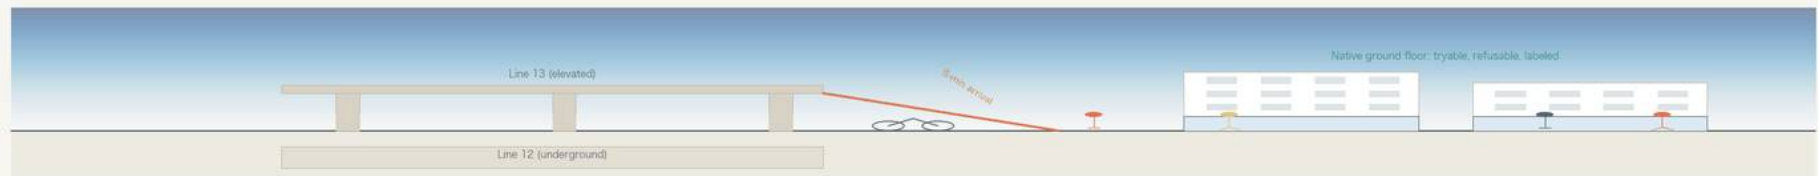

02 Origin • license window & KMO

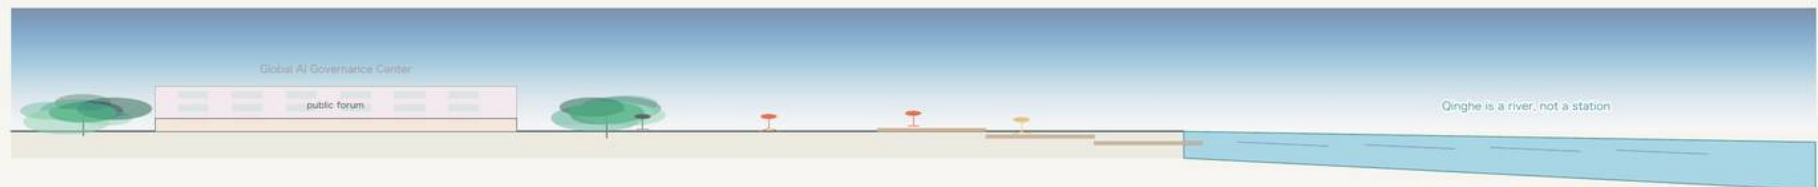

03 Wudaokou • 3-level stitch deck

04 Dazhongsi Sta. • arrival only

05 Qinghe • governance to river

How to read

Each is a cut

through ground.

walls, rails,

water, people —

not a one-point

symbol street.

Depth = rules

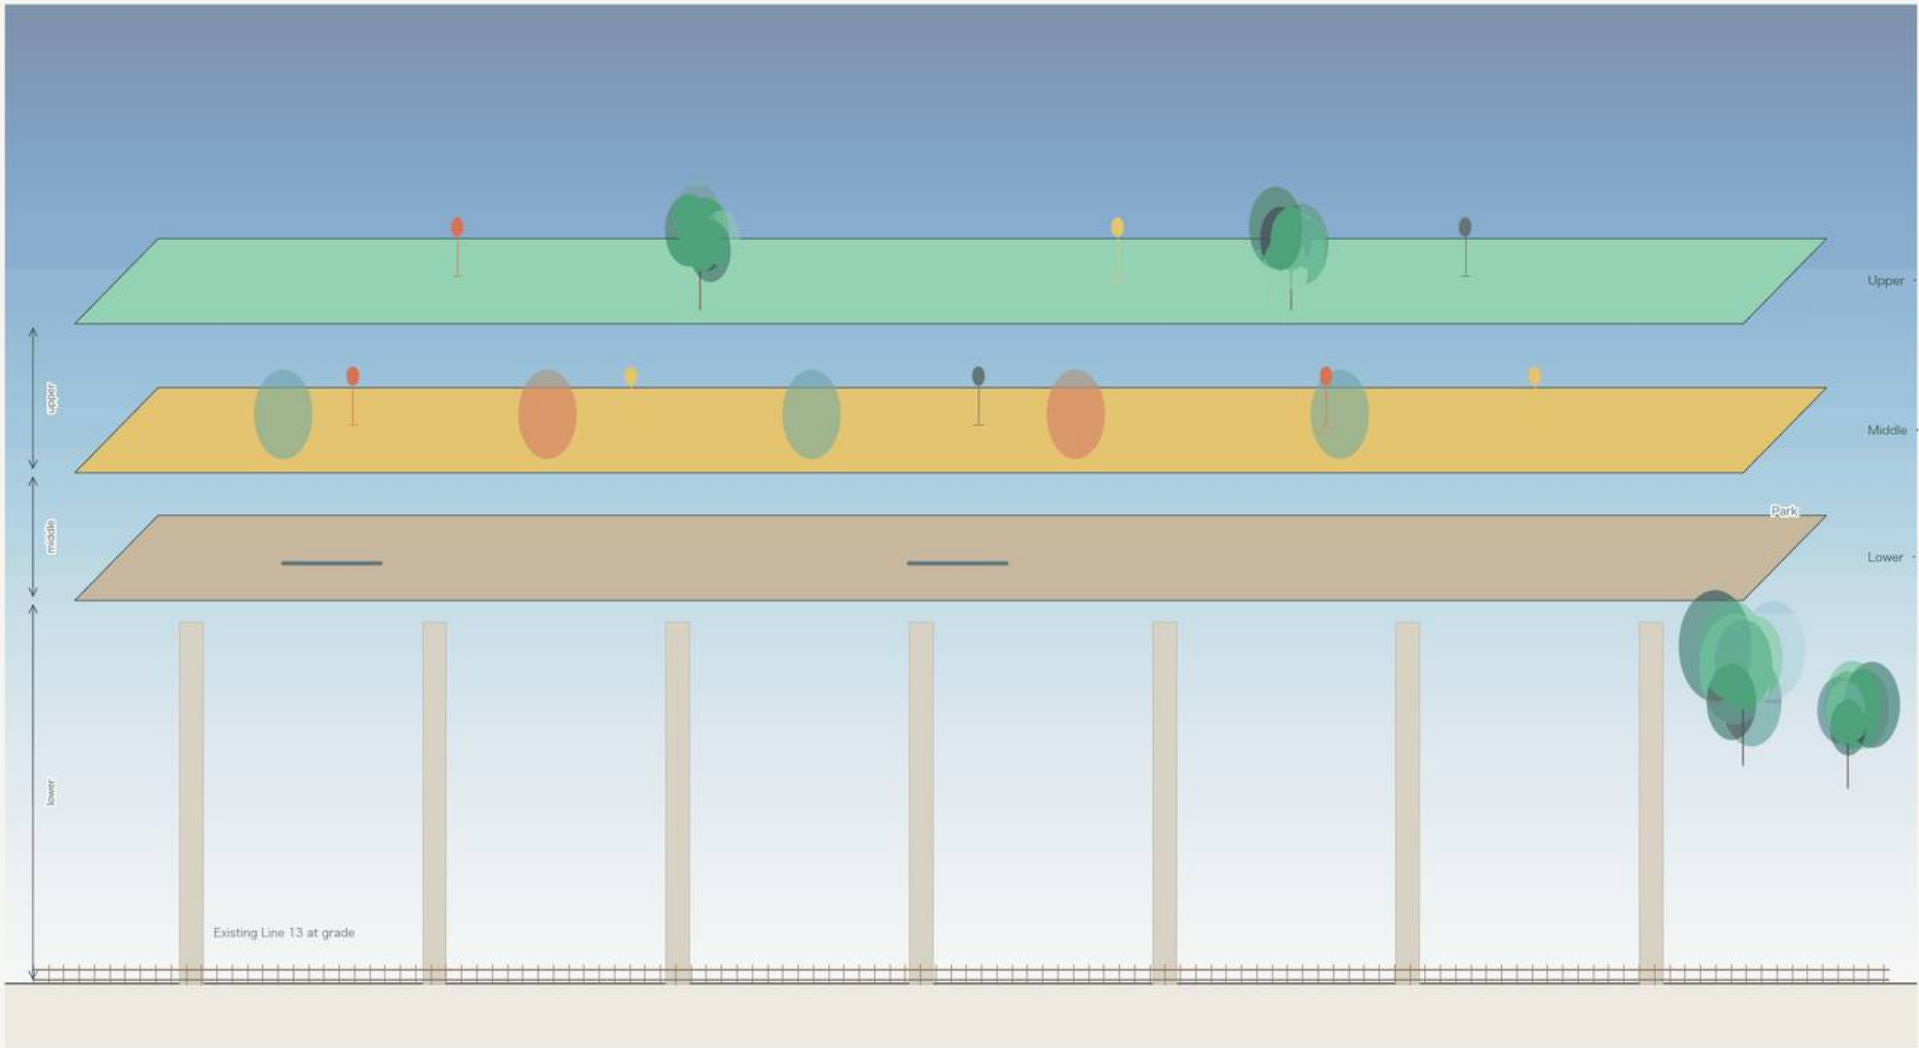

hold in section:

join • verify

exit • inherit

Wudaokou stitch deck: a reversible 3-level crossing

On existing pier logic · no unproven tunnels · pending red-line confirmation (concept, not construction)

Courage, bounded

○ section logic &

level relations

○ concept tie-ins

Upper

Middle

Lower

viewing deck

walk & marl

e-vehicles &

× no spans/loads

× no construction plan

× not an approved alignment

Plan B: no piers →

independent columns →

at-grade crossing +

signal priority

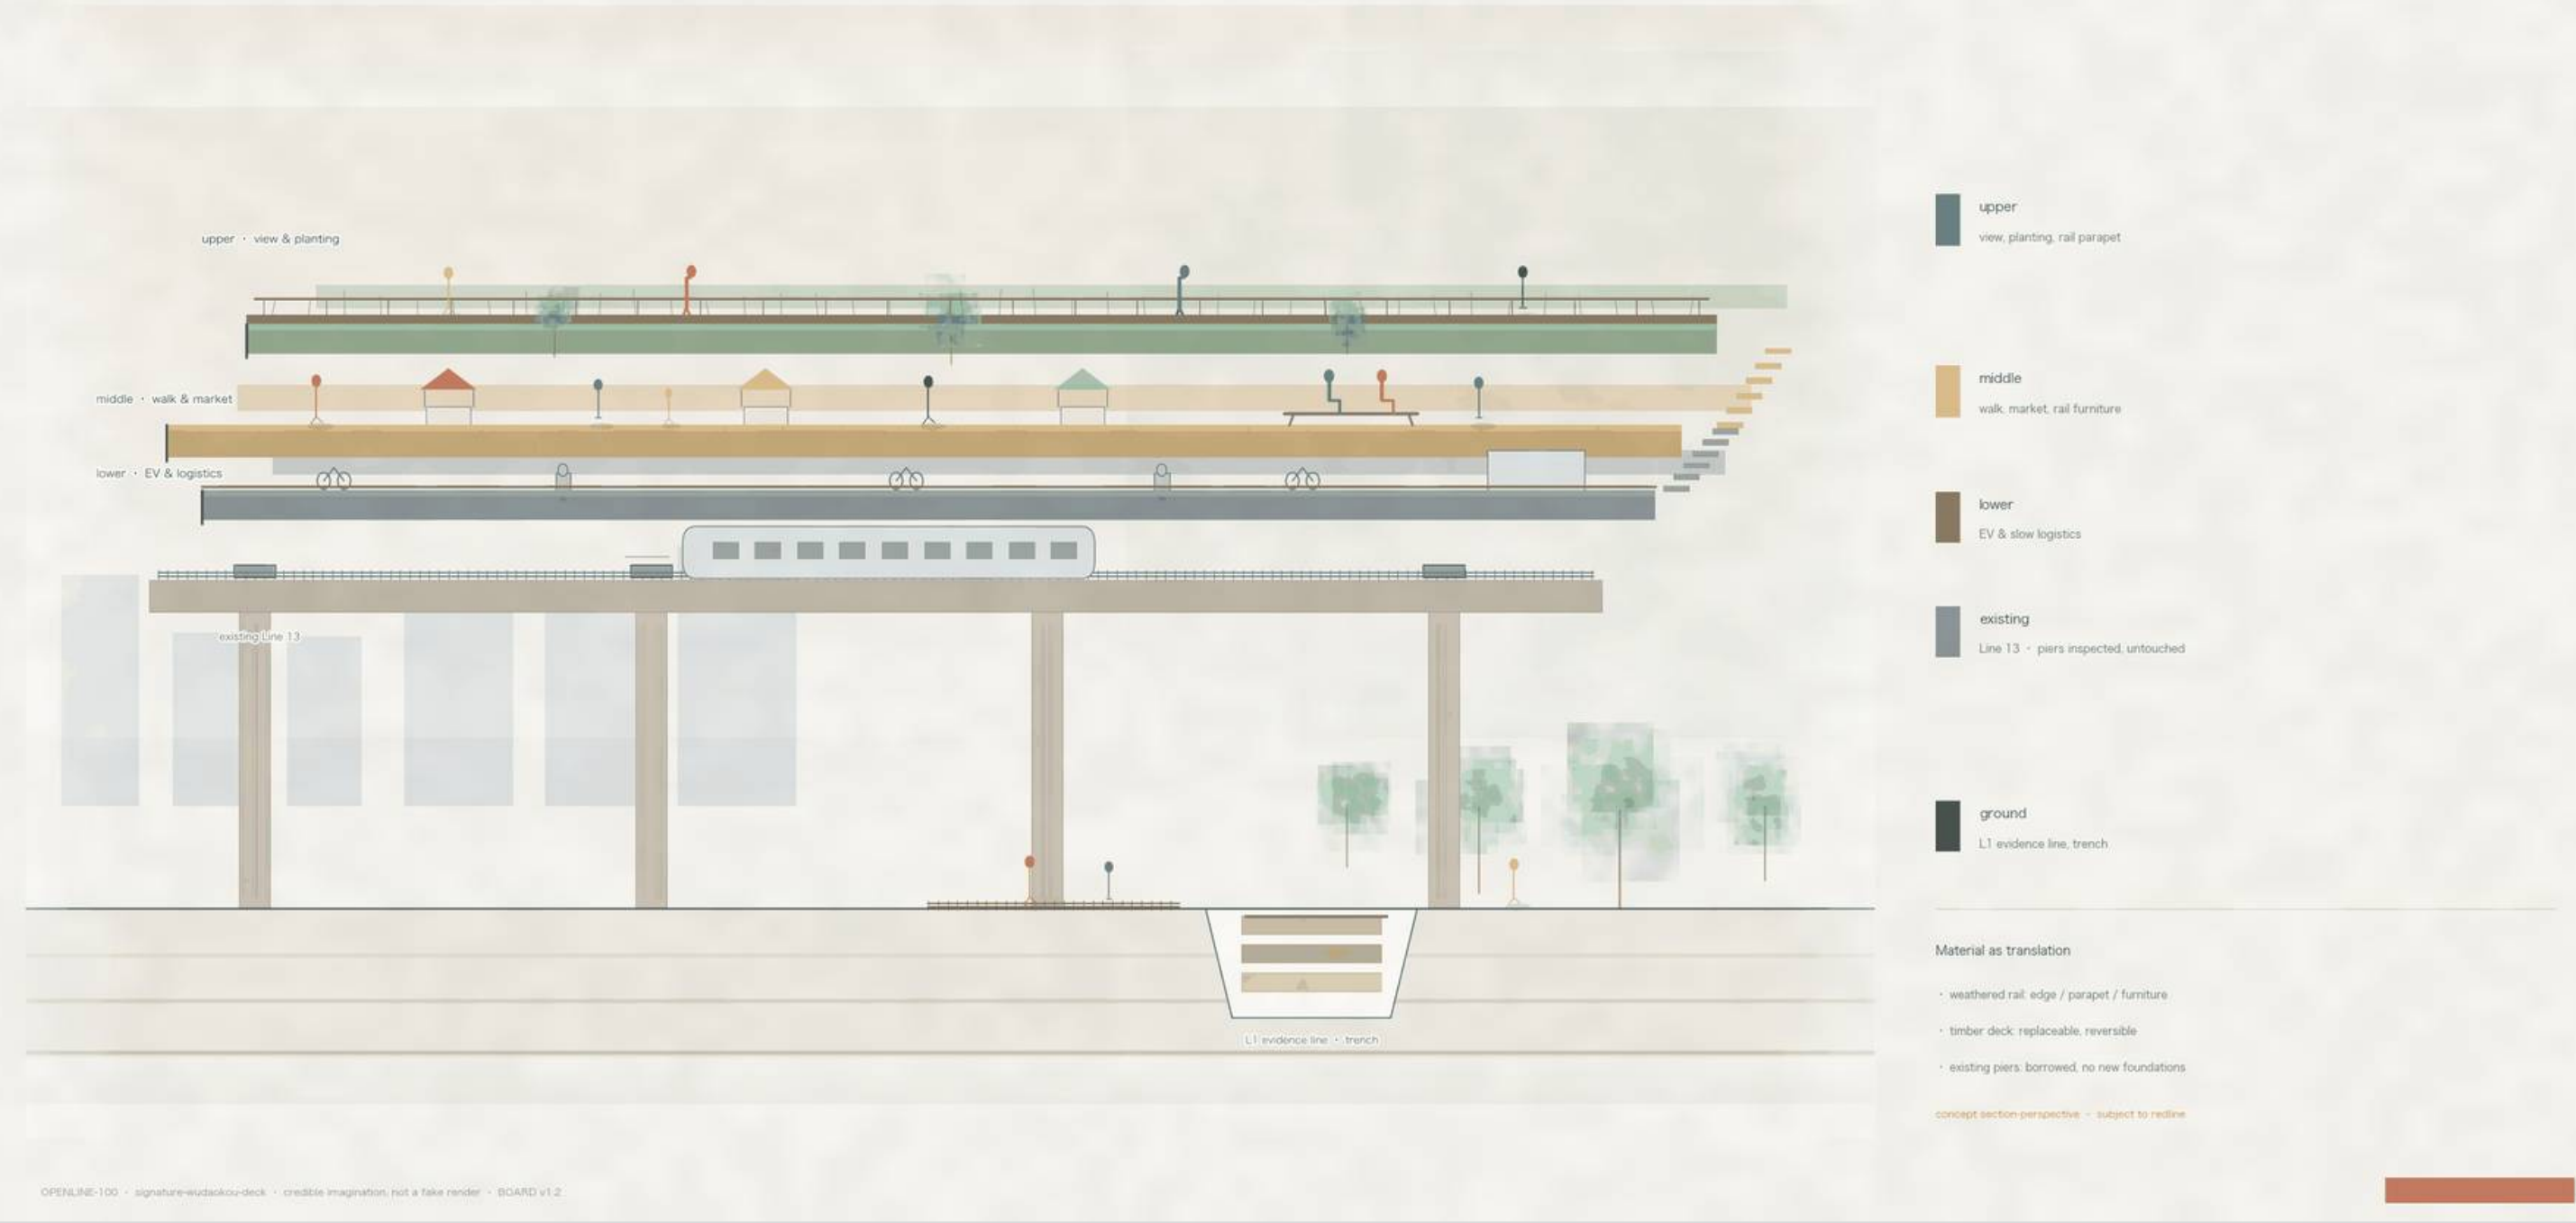

OL-07 · pending red-line confirmation · concept, not for construction

OPENLINE-100 · wudaokou-stitch-deck · reversible 3-level structure on existing pier logic · BOARD v1.2

10 Wudaokou stitch deck: three vertical layers

Wudaokou stitch deck: the boldest move drawn as credible everyday life

Section-perspective • material / level / real people • hand edges keep concept honest | OL-07

11 Signature: deck section-perspective • material, levels, real people

12 Rails made visible: the old alignment stitched into real fabric

Let the rails grow into the ground: five material translations

Components enter the public library, versioned via Inherit • sound & inscriptions pilot only after review

Ground • rail as paving

No unreachable exhibits

Section • archaeology trench

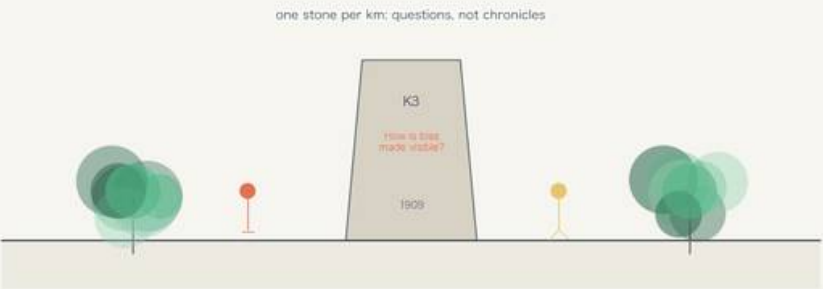

No mass excavation

Furniture • rails reused

No fake authenticity

Narrative • question stones

No trivializing history

Sound • steam × white-noise

No noise nuisance

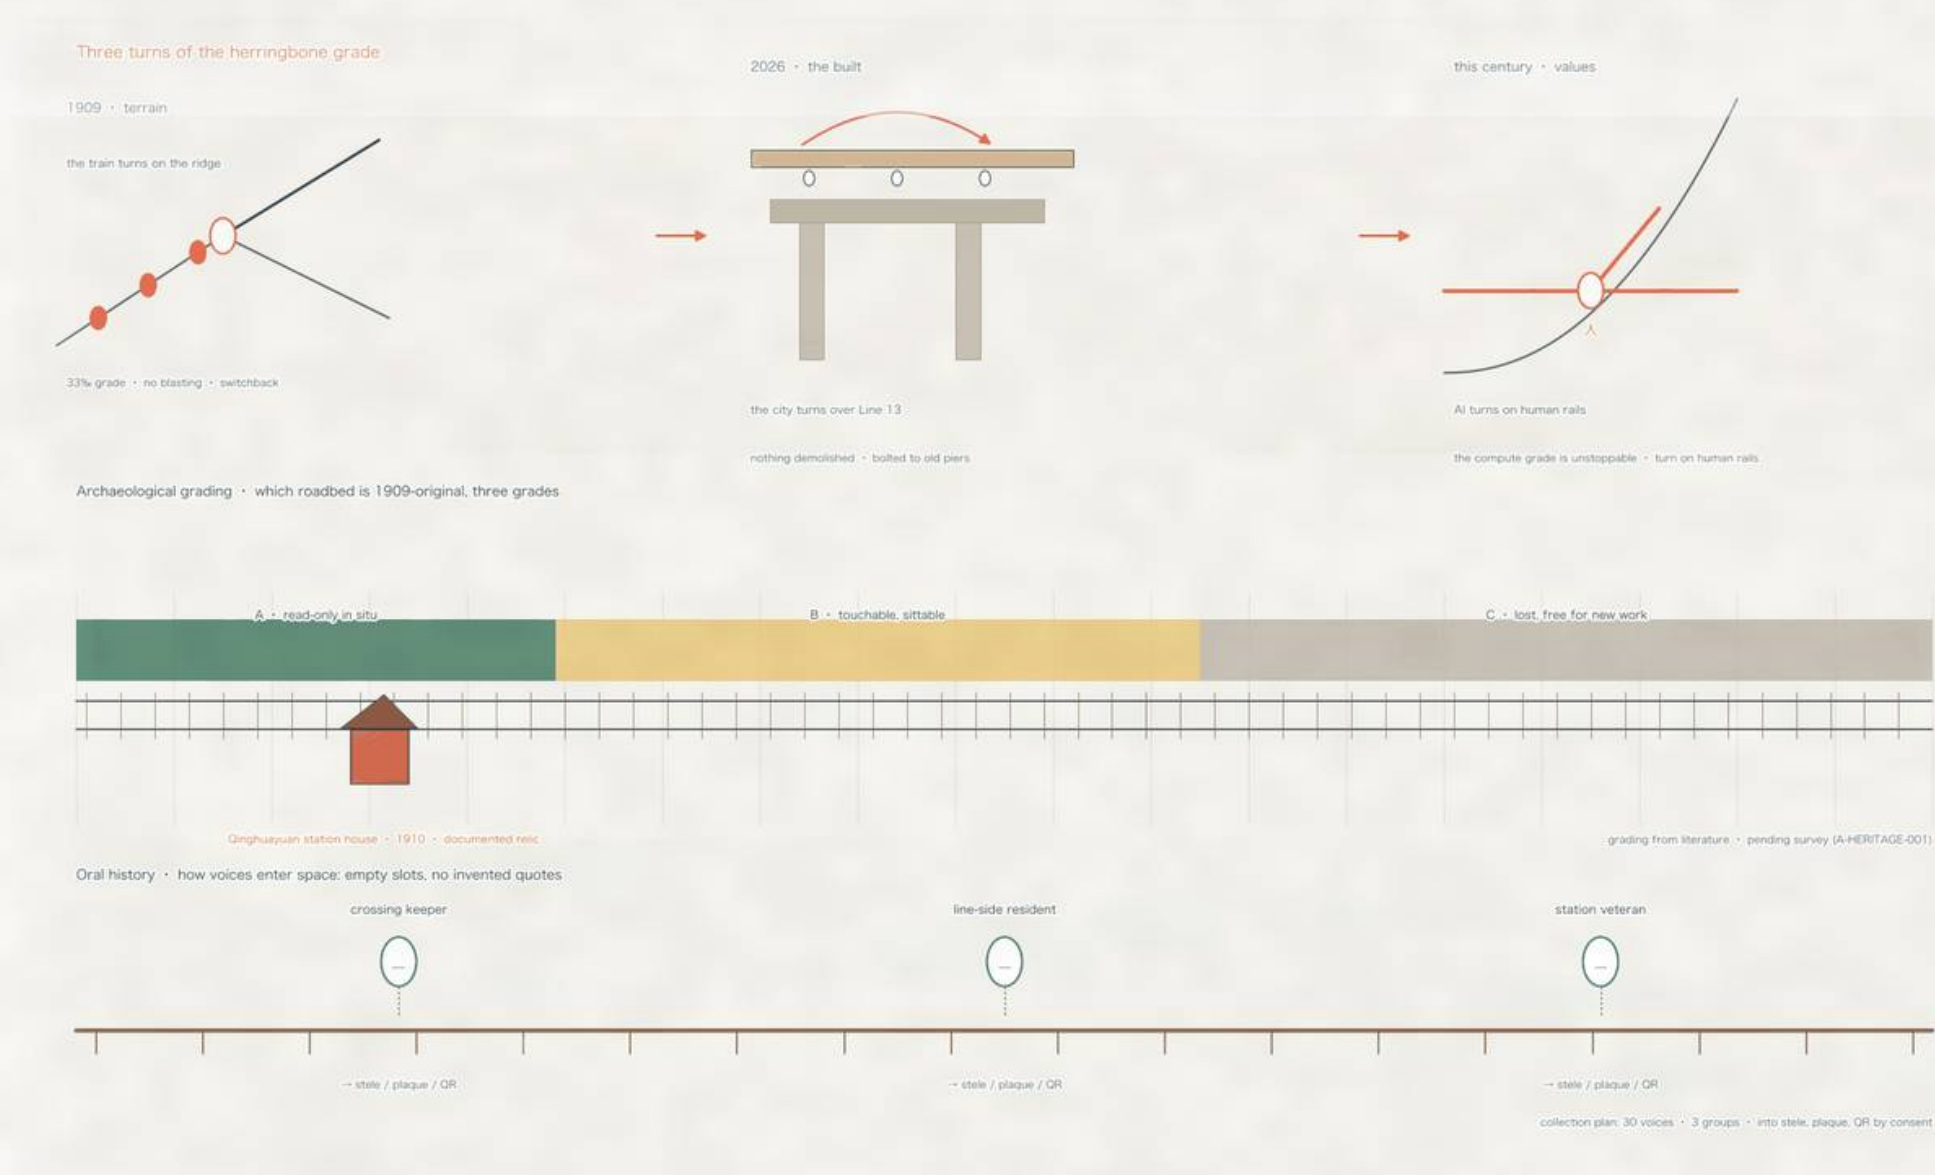

Three rules before entering the library

- ① Reuse only after clearance & safety testing
- ② Versioned via Inherit: join / exit / inherit
- ③ Sound & inscriptions pilot after permit & review

All five share one ground: rails stay in the street.

Heritage made soulful: grading • voices • rails of humanity

From preserving heritage to continuing Jing-Zhang | 3 grades × 3 voices × 3 turns | A-HERITAGE-001 framework

以人为轨

Rails of humanity

In 1909, the 「人」

drew the line's shape.

In this century, it names

whom the line belongs to.

Railway anatomy → today

switchback = Verify / Exit gates

safety siding = Failure Case Library

test track = governance sandbox

rail = human values, not compute

Each in its place

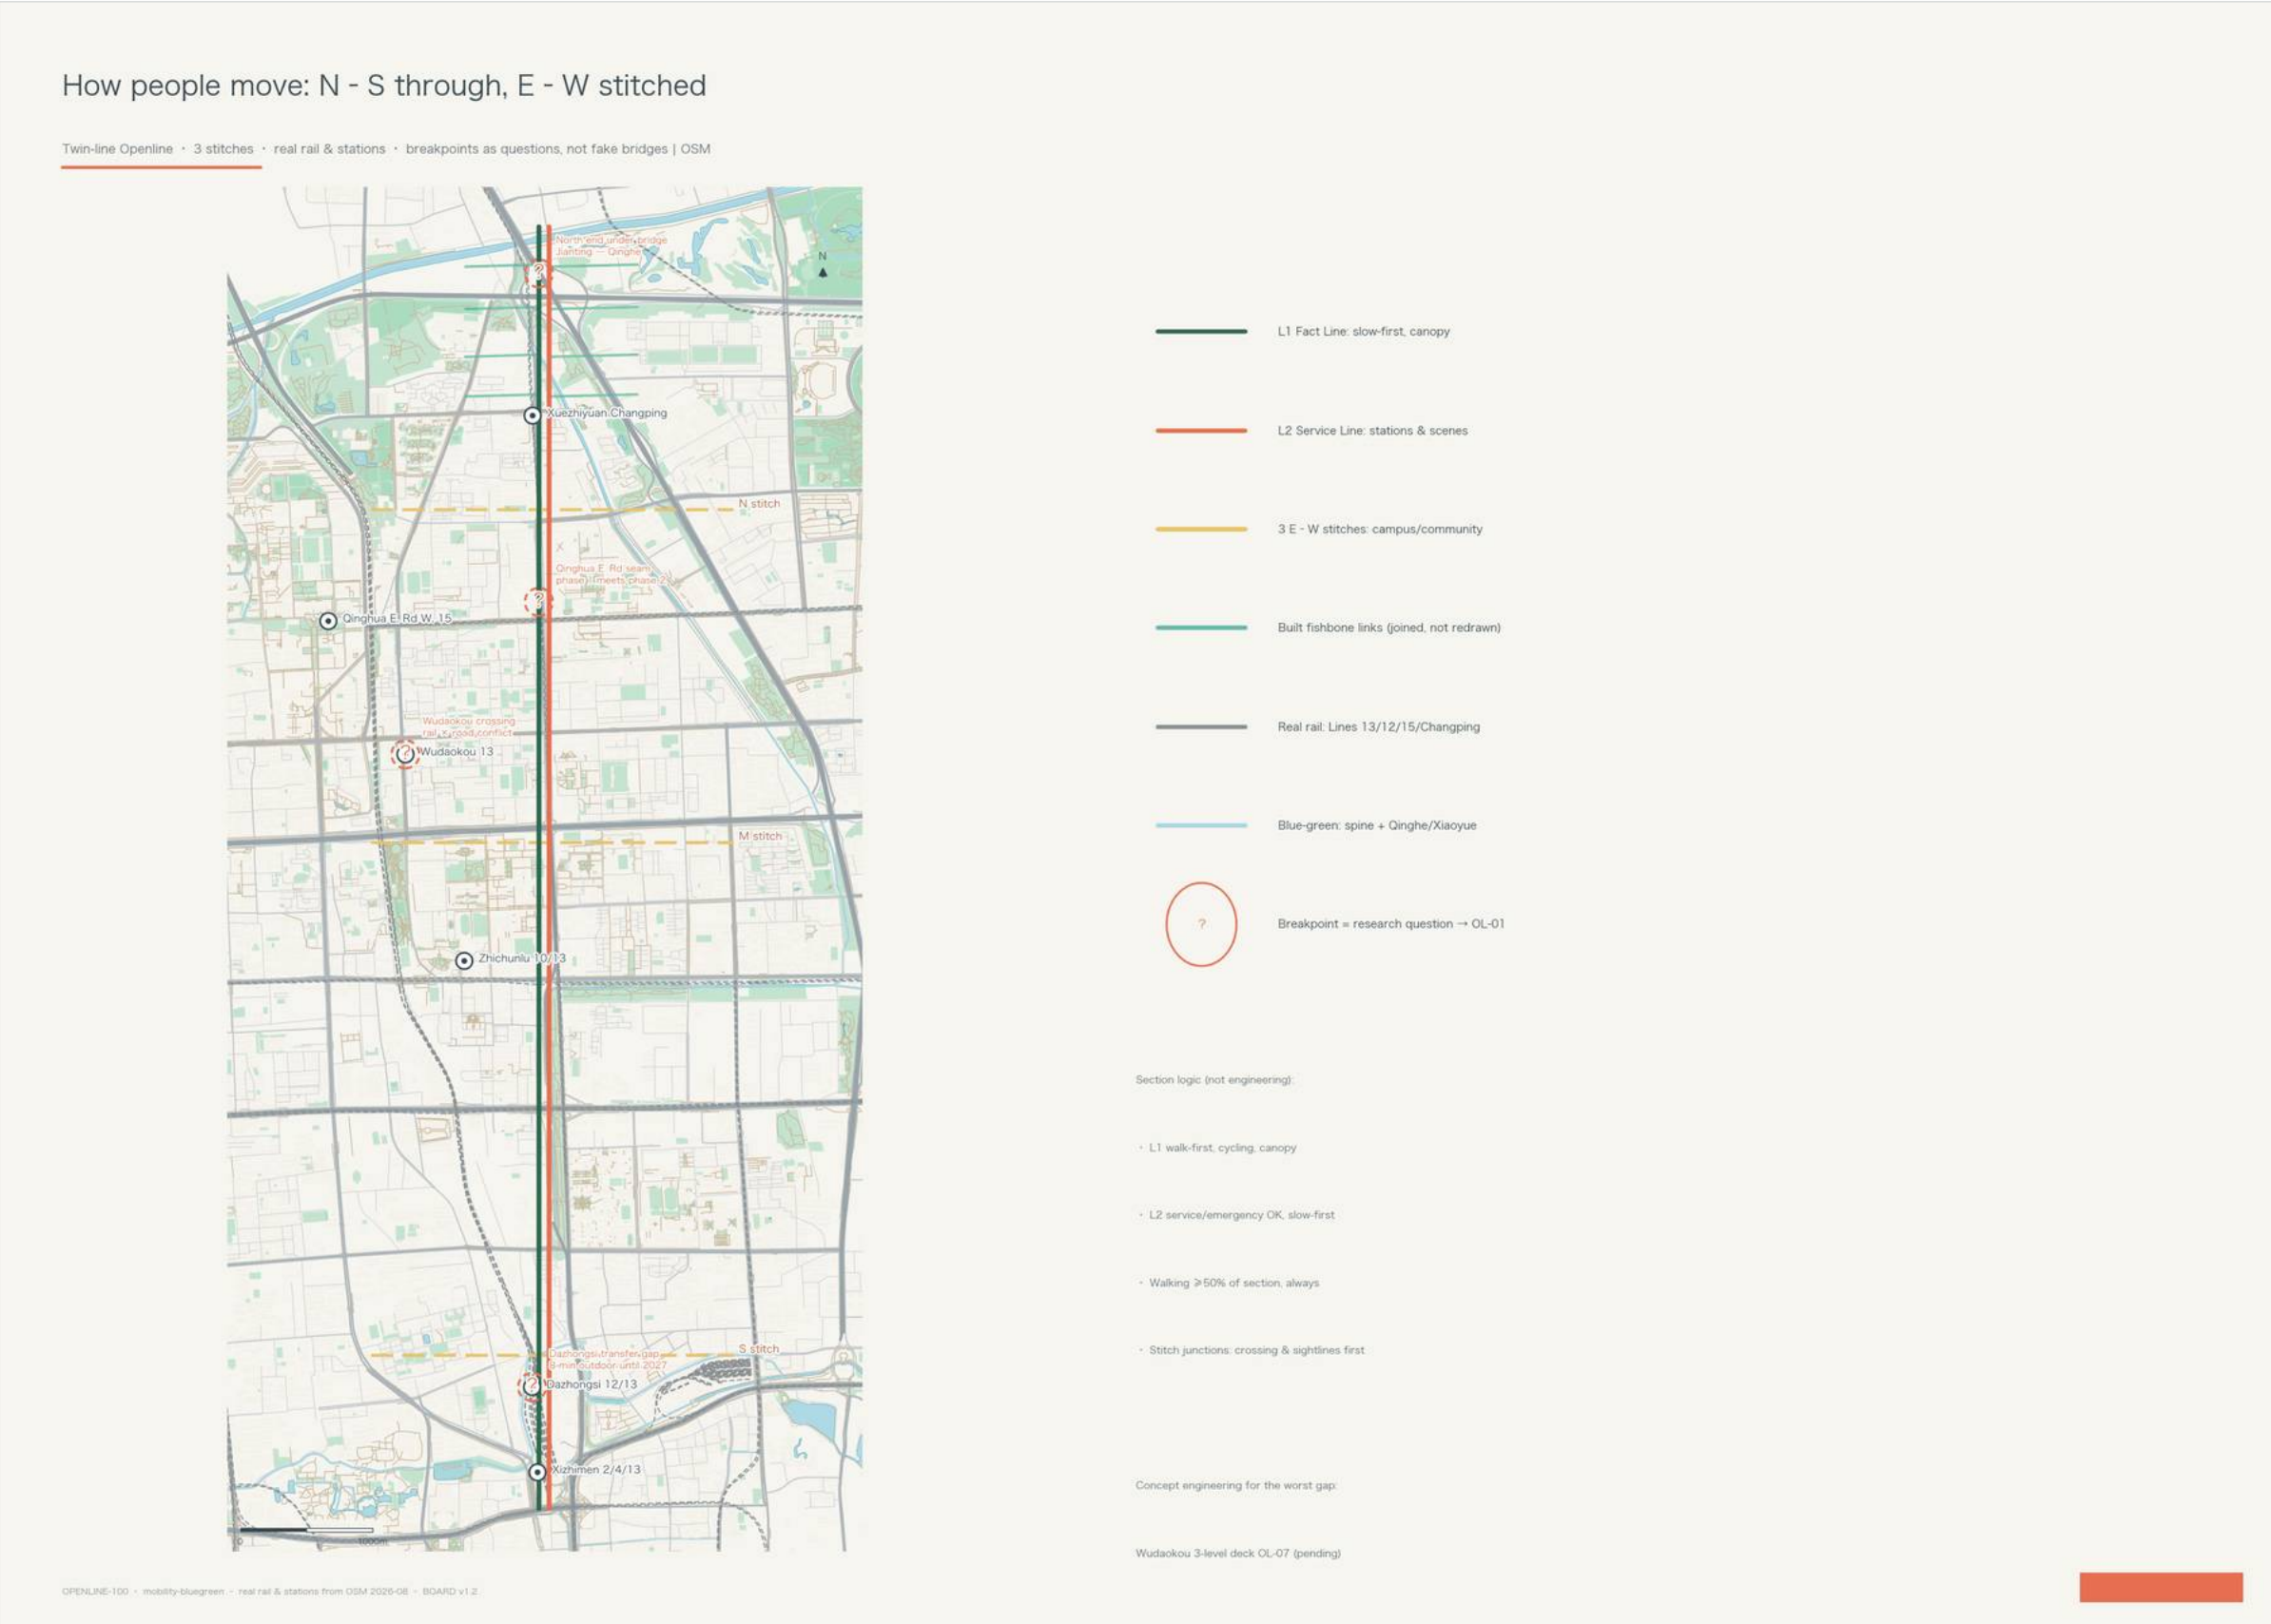

grading • for the fabric

voices • for the people

the turn • for the century

grading is a literature framework, pending survey

voice slots are empty, awaiting real collection

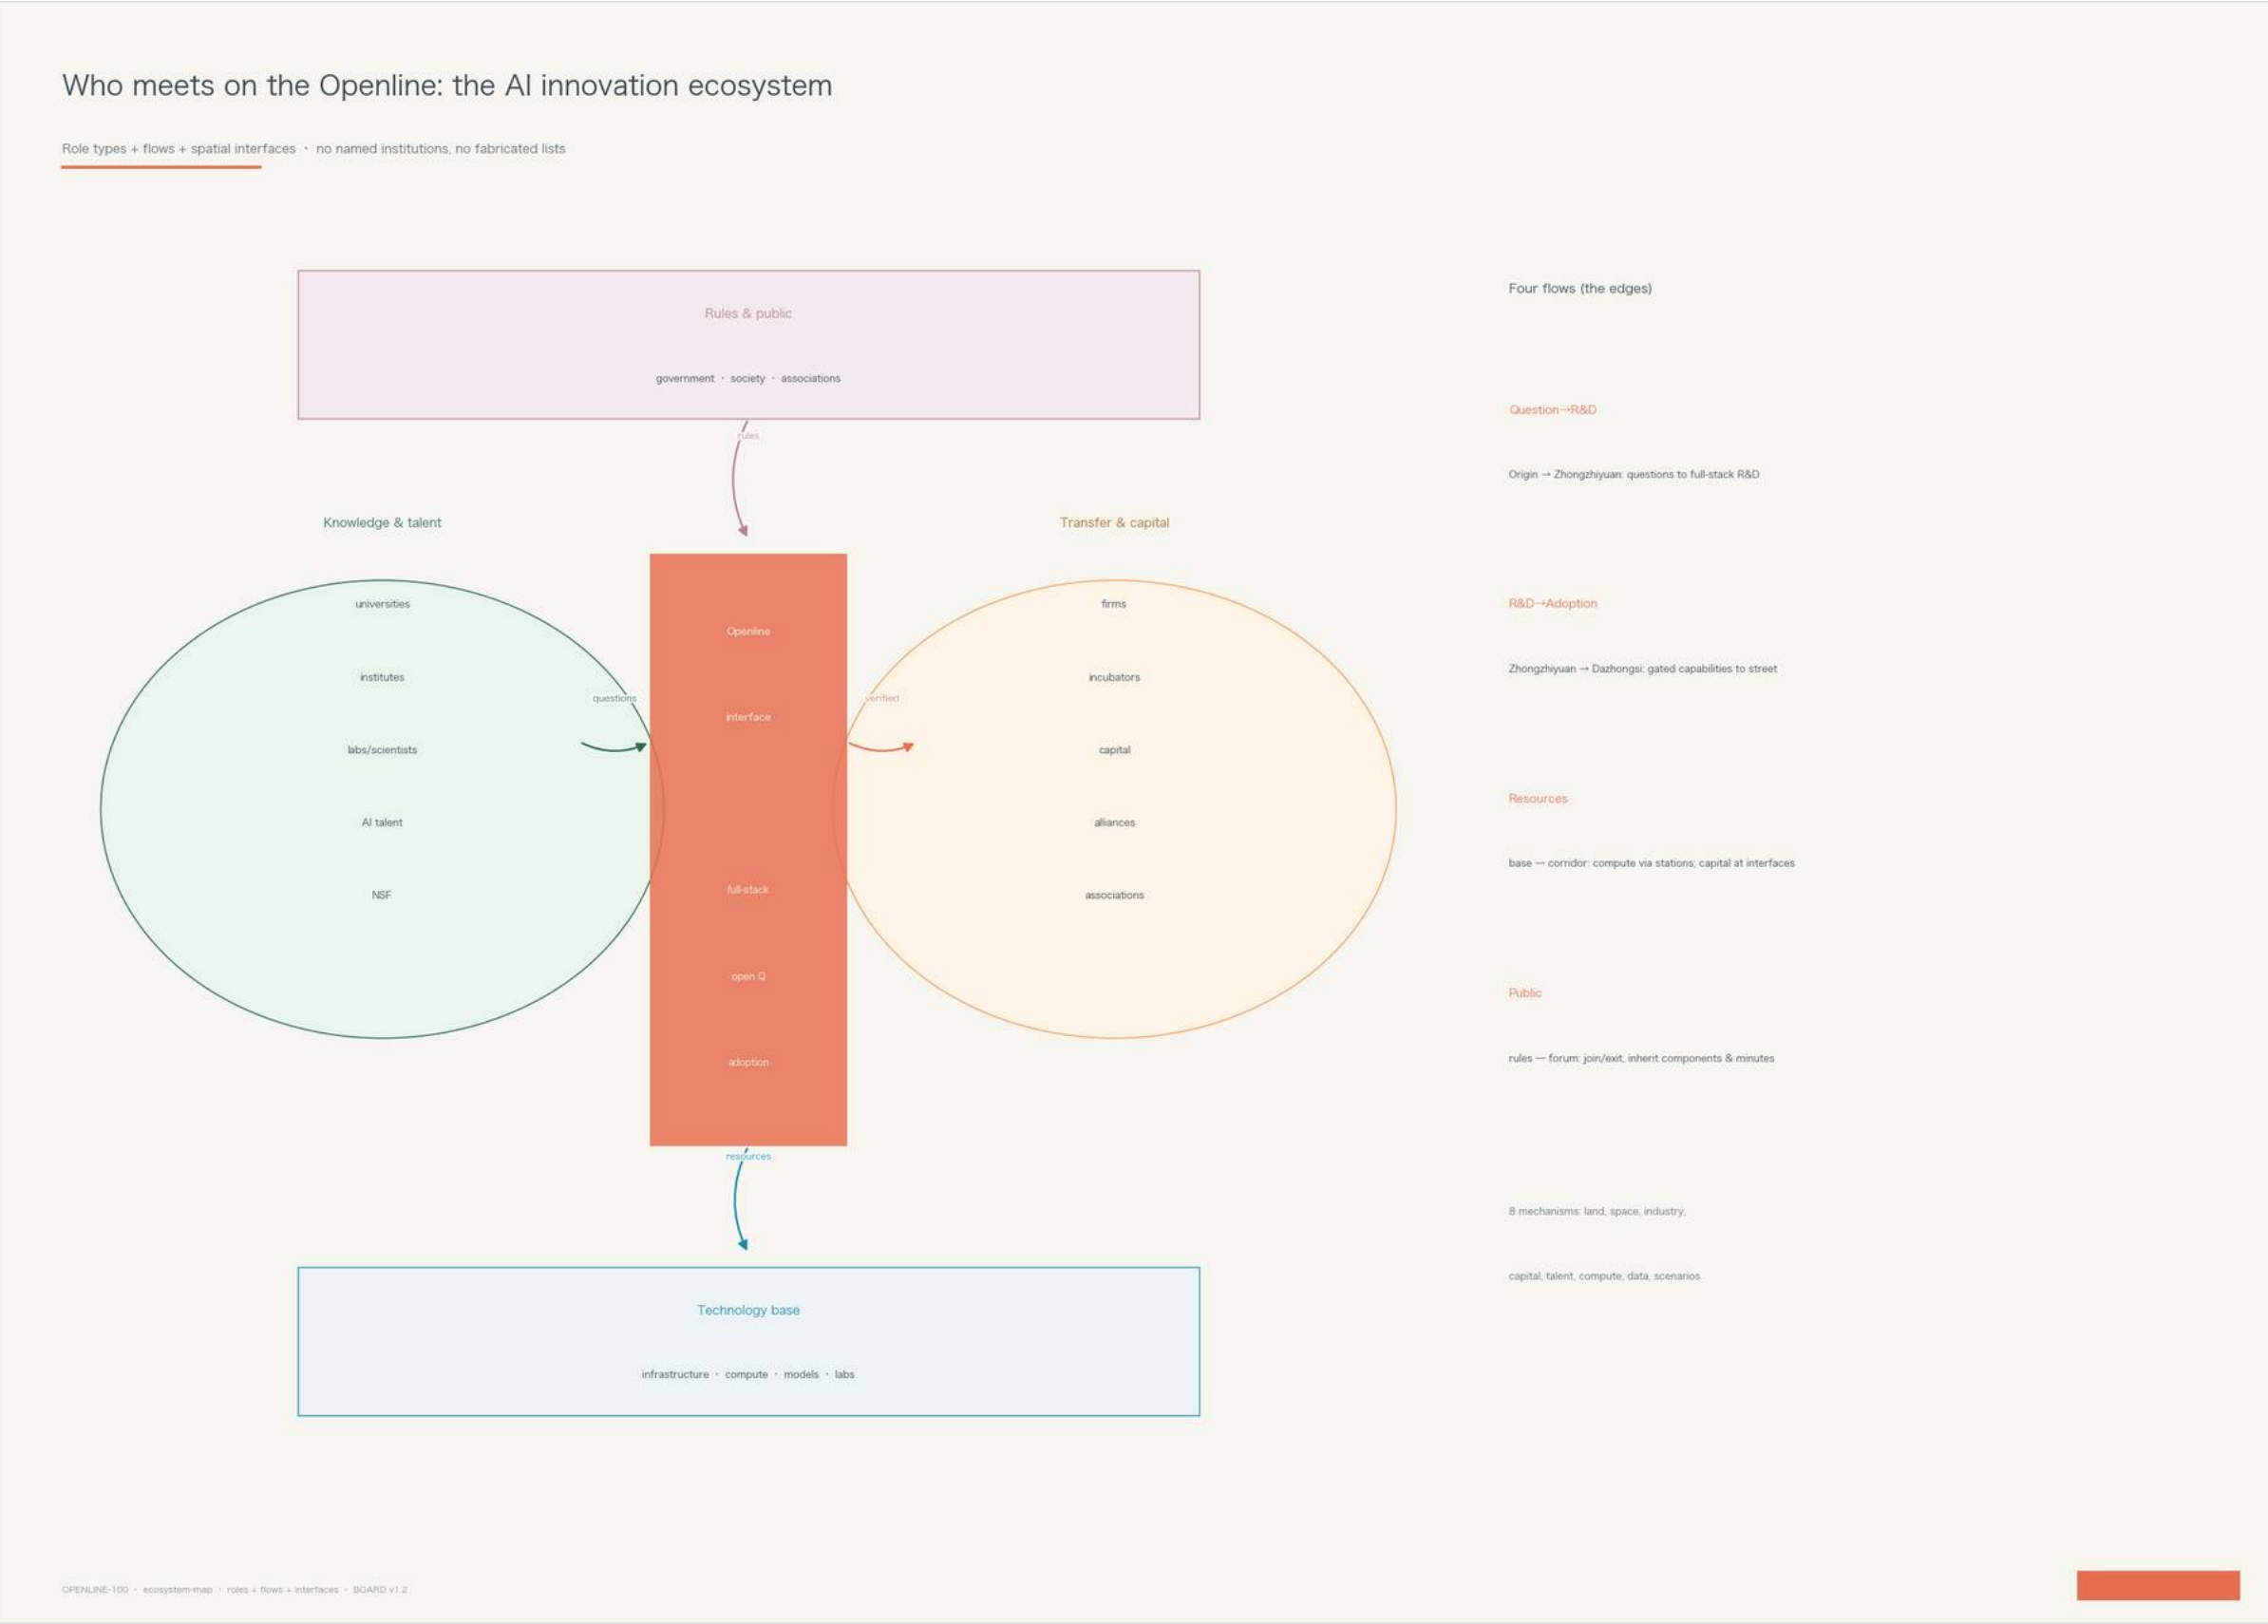

15 Slow mobility and blue-green network

Carbon budget · runoff capture · heat island · biodiversity net gain · canopy | sensors to trust, Verify gate publishes | targets per A-ECO-001

recalc on official data

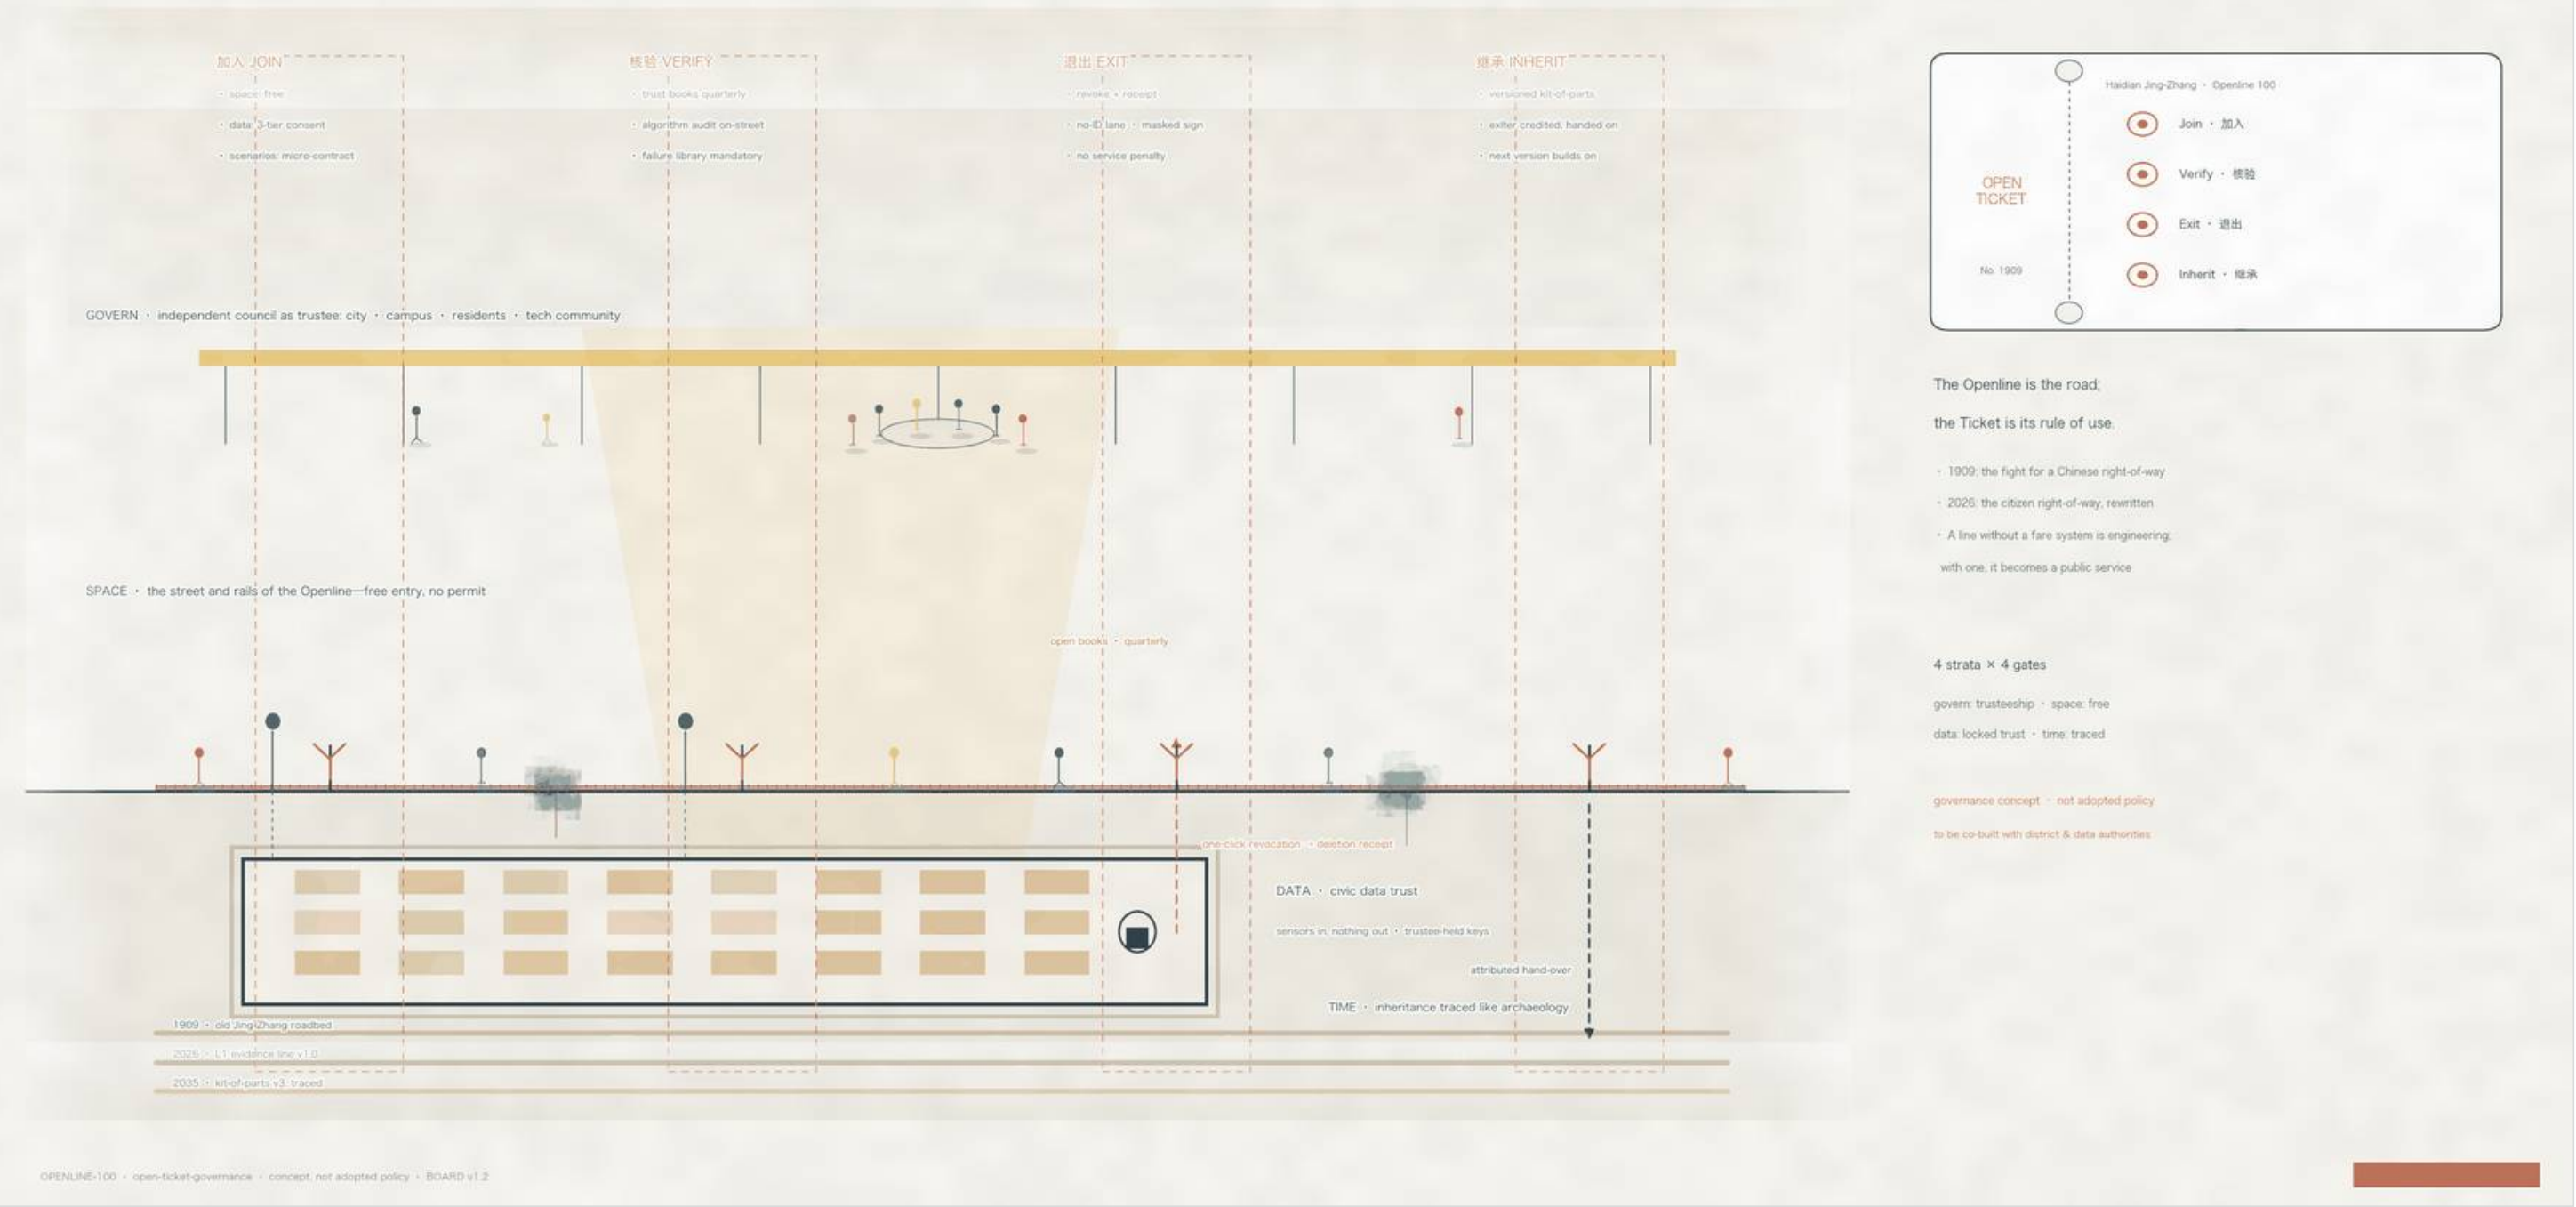

design targets - A-ECO-001 (Beijing sponge-city & int'l BNG bands) - not measured results: recalc on official data

17 Ecosystem map: five habitat rings

Open Ticket institutional section: the fare system of the Openline

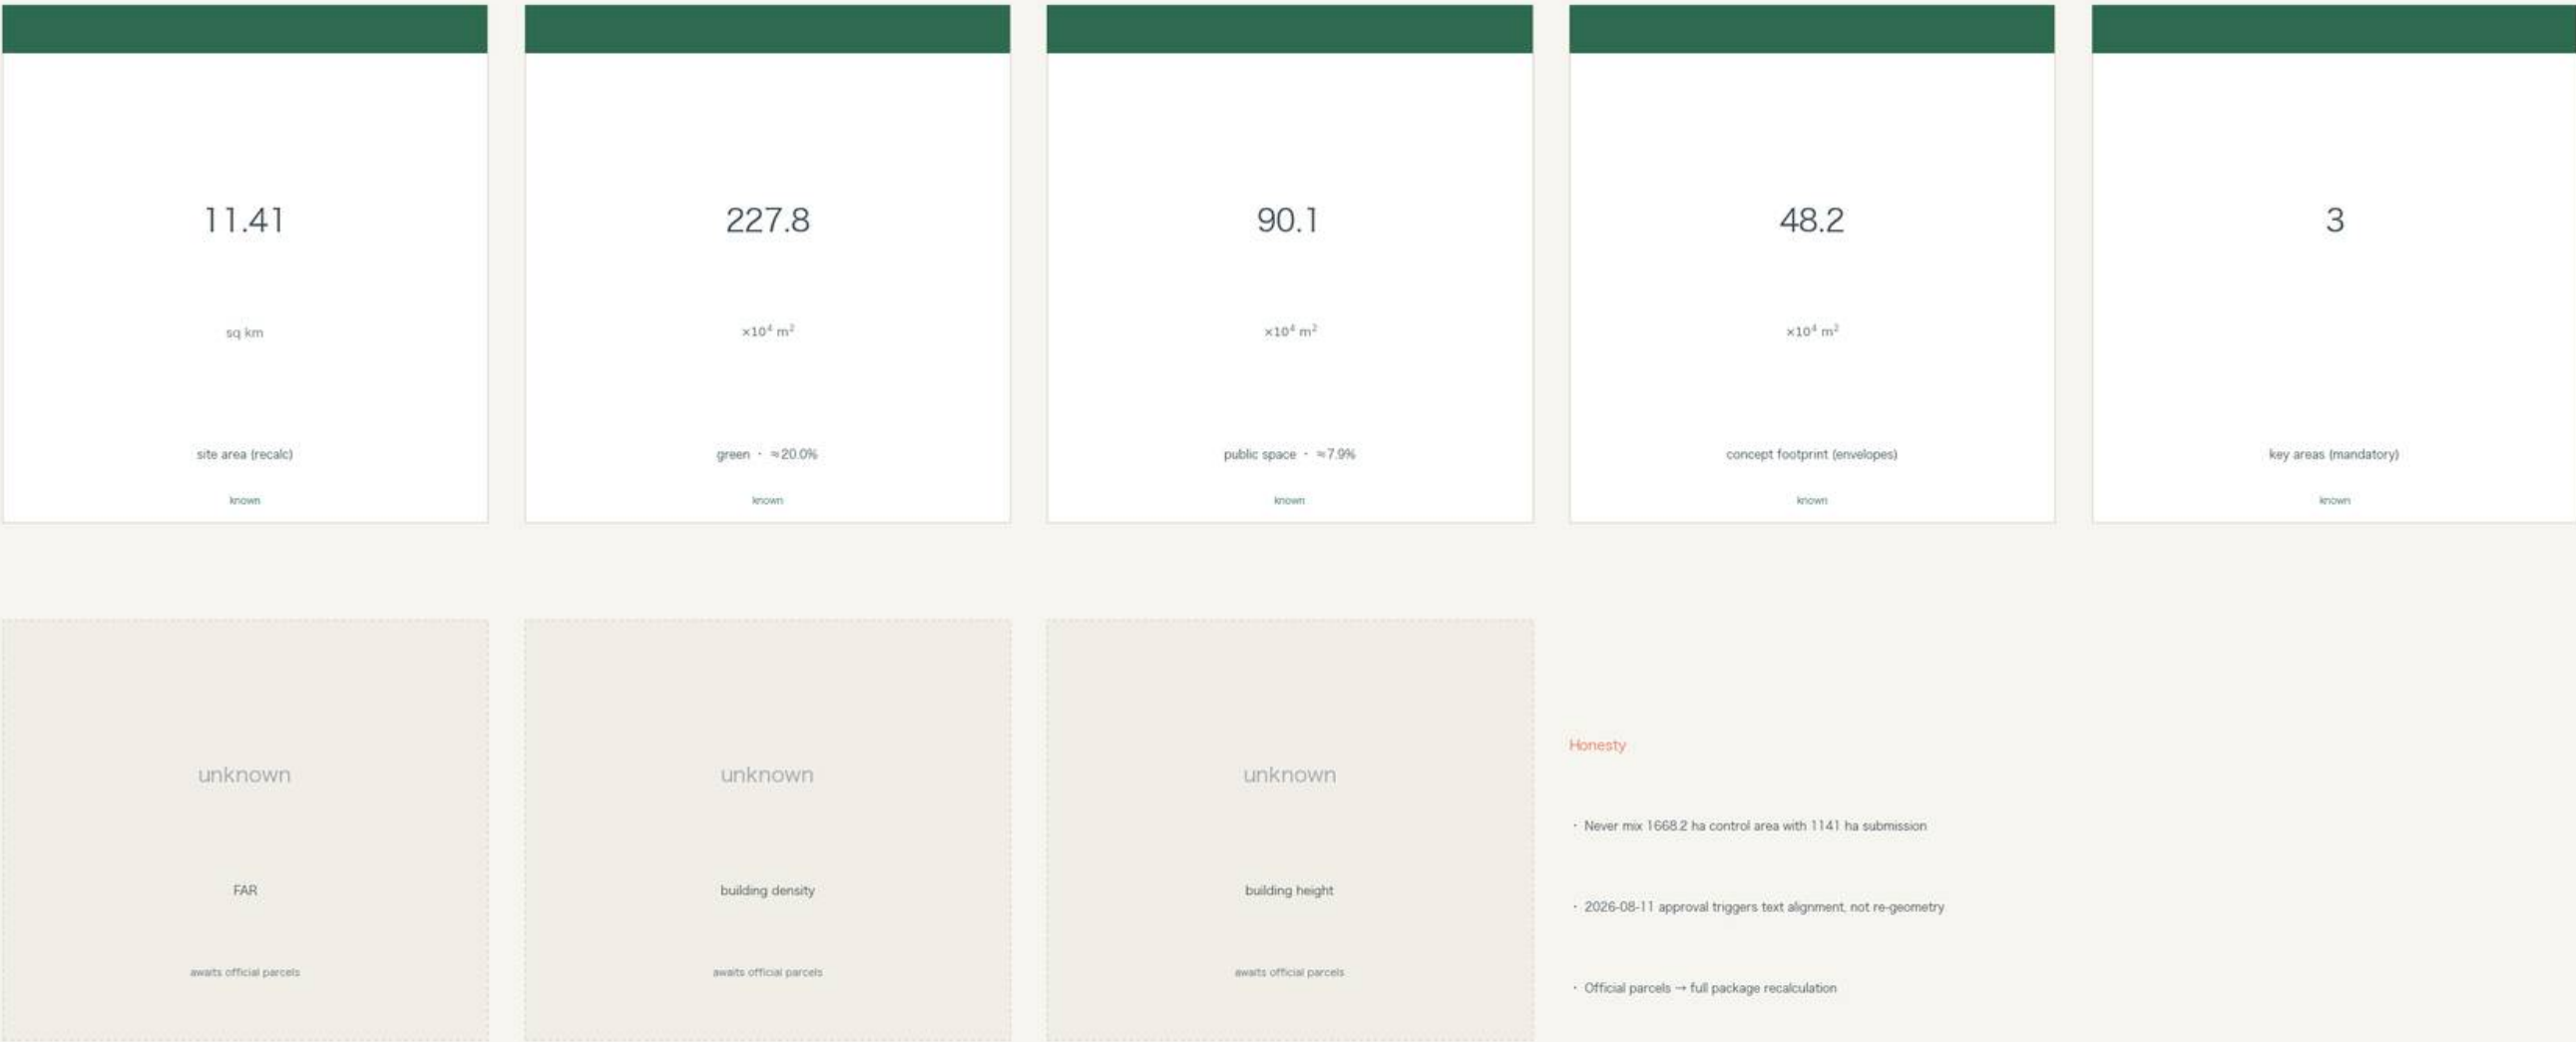

The right-of-way rewritten for the digital century | Join • Verify • Exit • Inherit × govern / space / data / time | governance concept

18 Open Ticket institutional section: Join • Verify • Exit • Inherit

What is recalculated, what still awaits official data

Type 1 recalculated (provisional) • Type 2 structure known / intensity unknown • Type 3 performance in assumptions

- Honesty
- Never mix 1668.2 ha control area with 1141 ha submission
 - 2026-08-11 approval triggers text alignment, not re-geometry
 - Official parcels → full package recalculation

Public space first, intensity follows: 0 - 1 • 1 - 3 • 3 - 10 yrs

Same actions as OL-01 - 10 • phasing is not a funding plan | real OSM fabric | dashed = not yet built

0 - 1 yr • prototype

0 - 1 yr • prototype

- Arrival first
- KMO + M-stitch sample
- Single station prototype

1 - 3 yr • streets

1 - 3 yr • streets

- One unit cluster opens
- Native street pilot
- License window & hall

3 - 10 yr • network

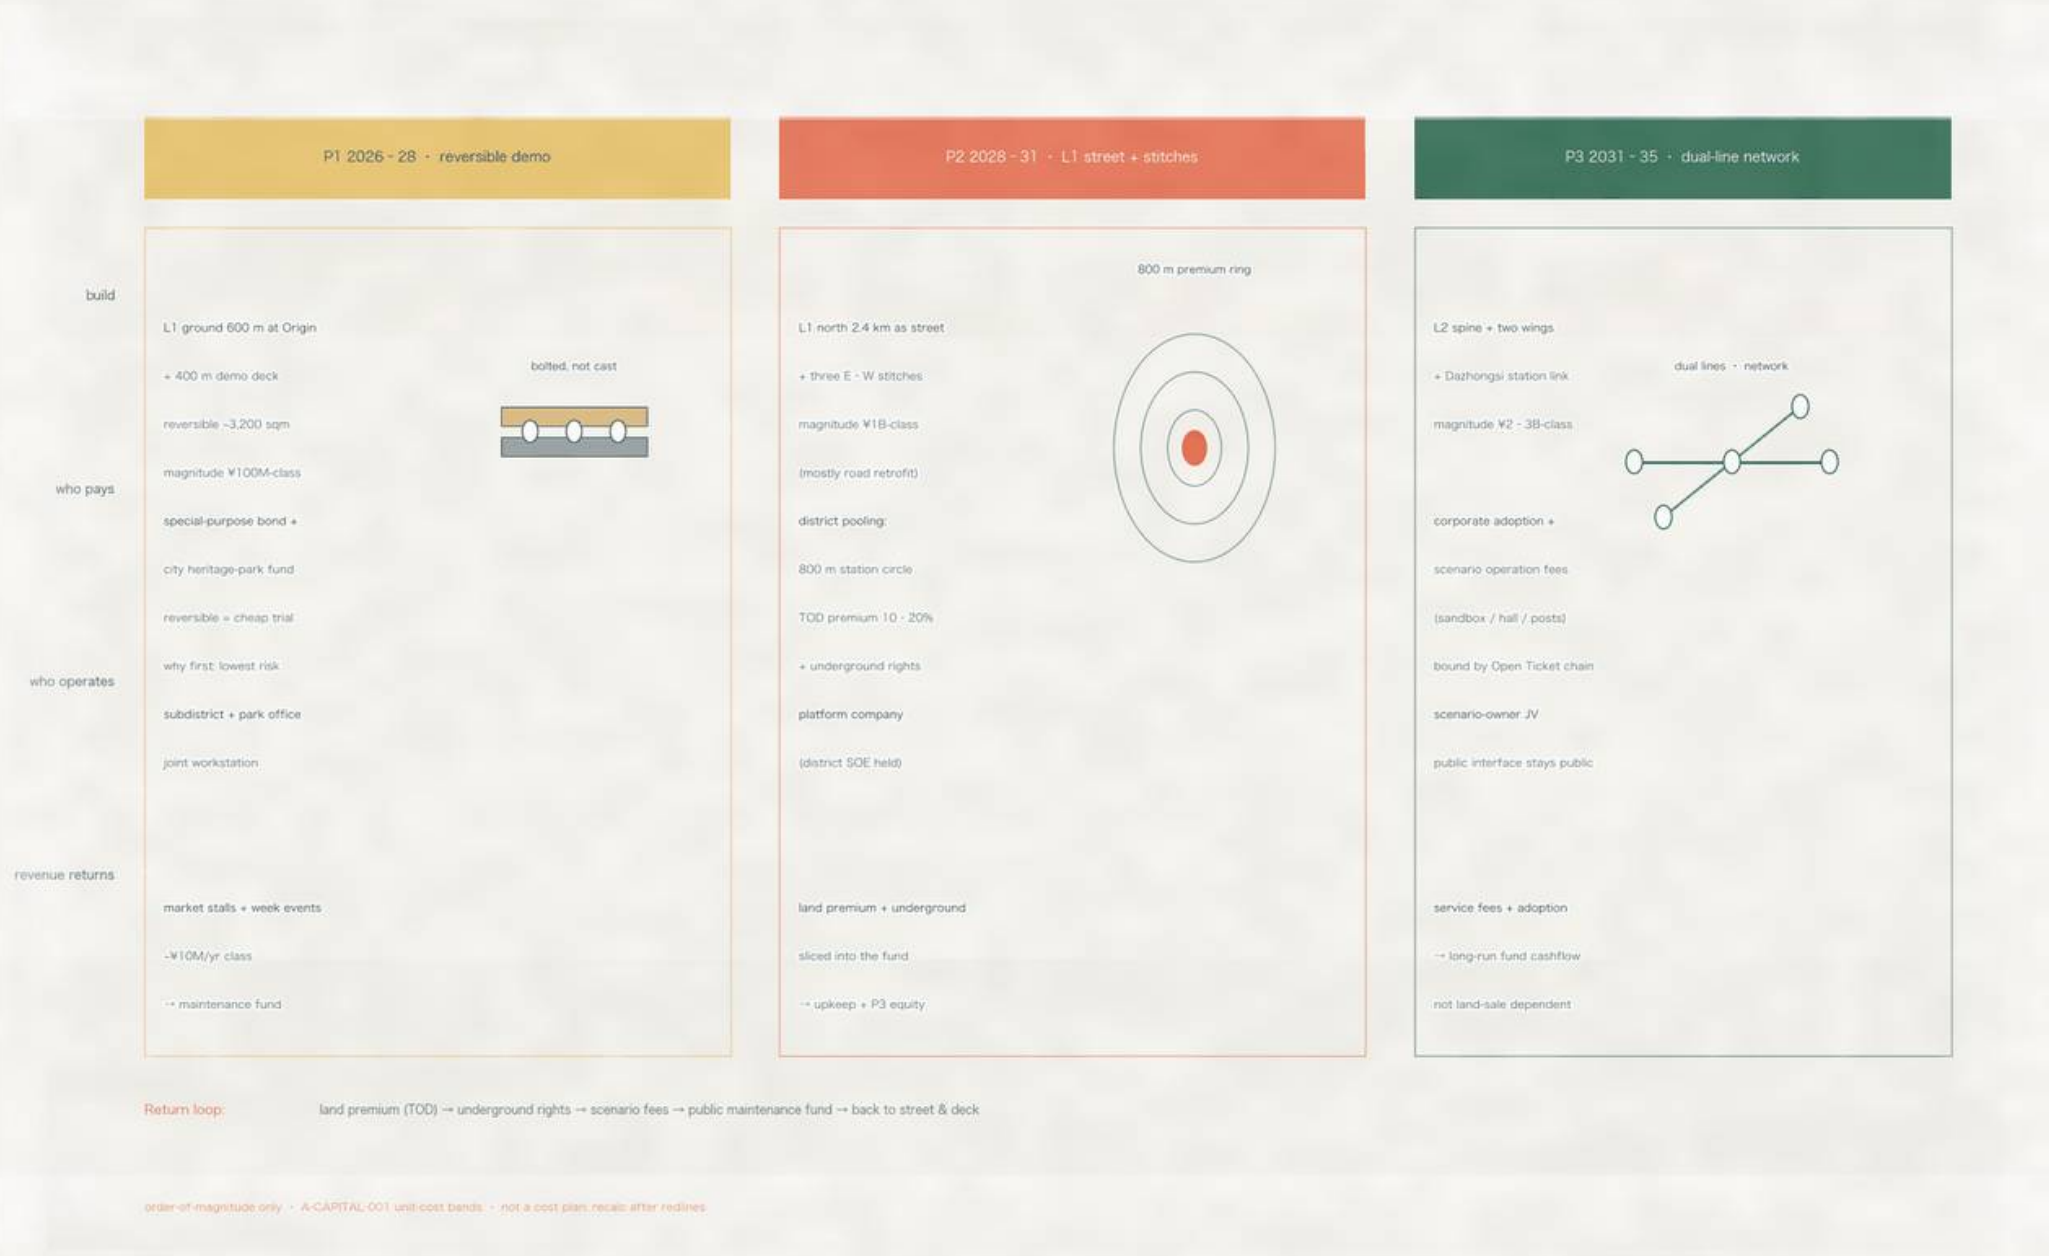

3 - 10 yr • network

- Three-area network
- OL-07 deck mid-term
- Governance center

OPENLINE-100 • key-phasing • 0 - 1 / 1 - 3 / 3 - 10 on real fabric • BOARD v1.2

Capital logic of phasing: reversibility is low risk

Each phase answers build / pay / operate / return | bond → pooling → adoption relay | magnitude only, A-CAPITAL-001

Three financing scenarios • relay, not either-or

What reversibility buys

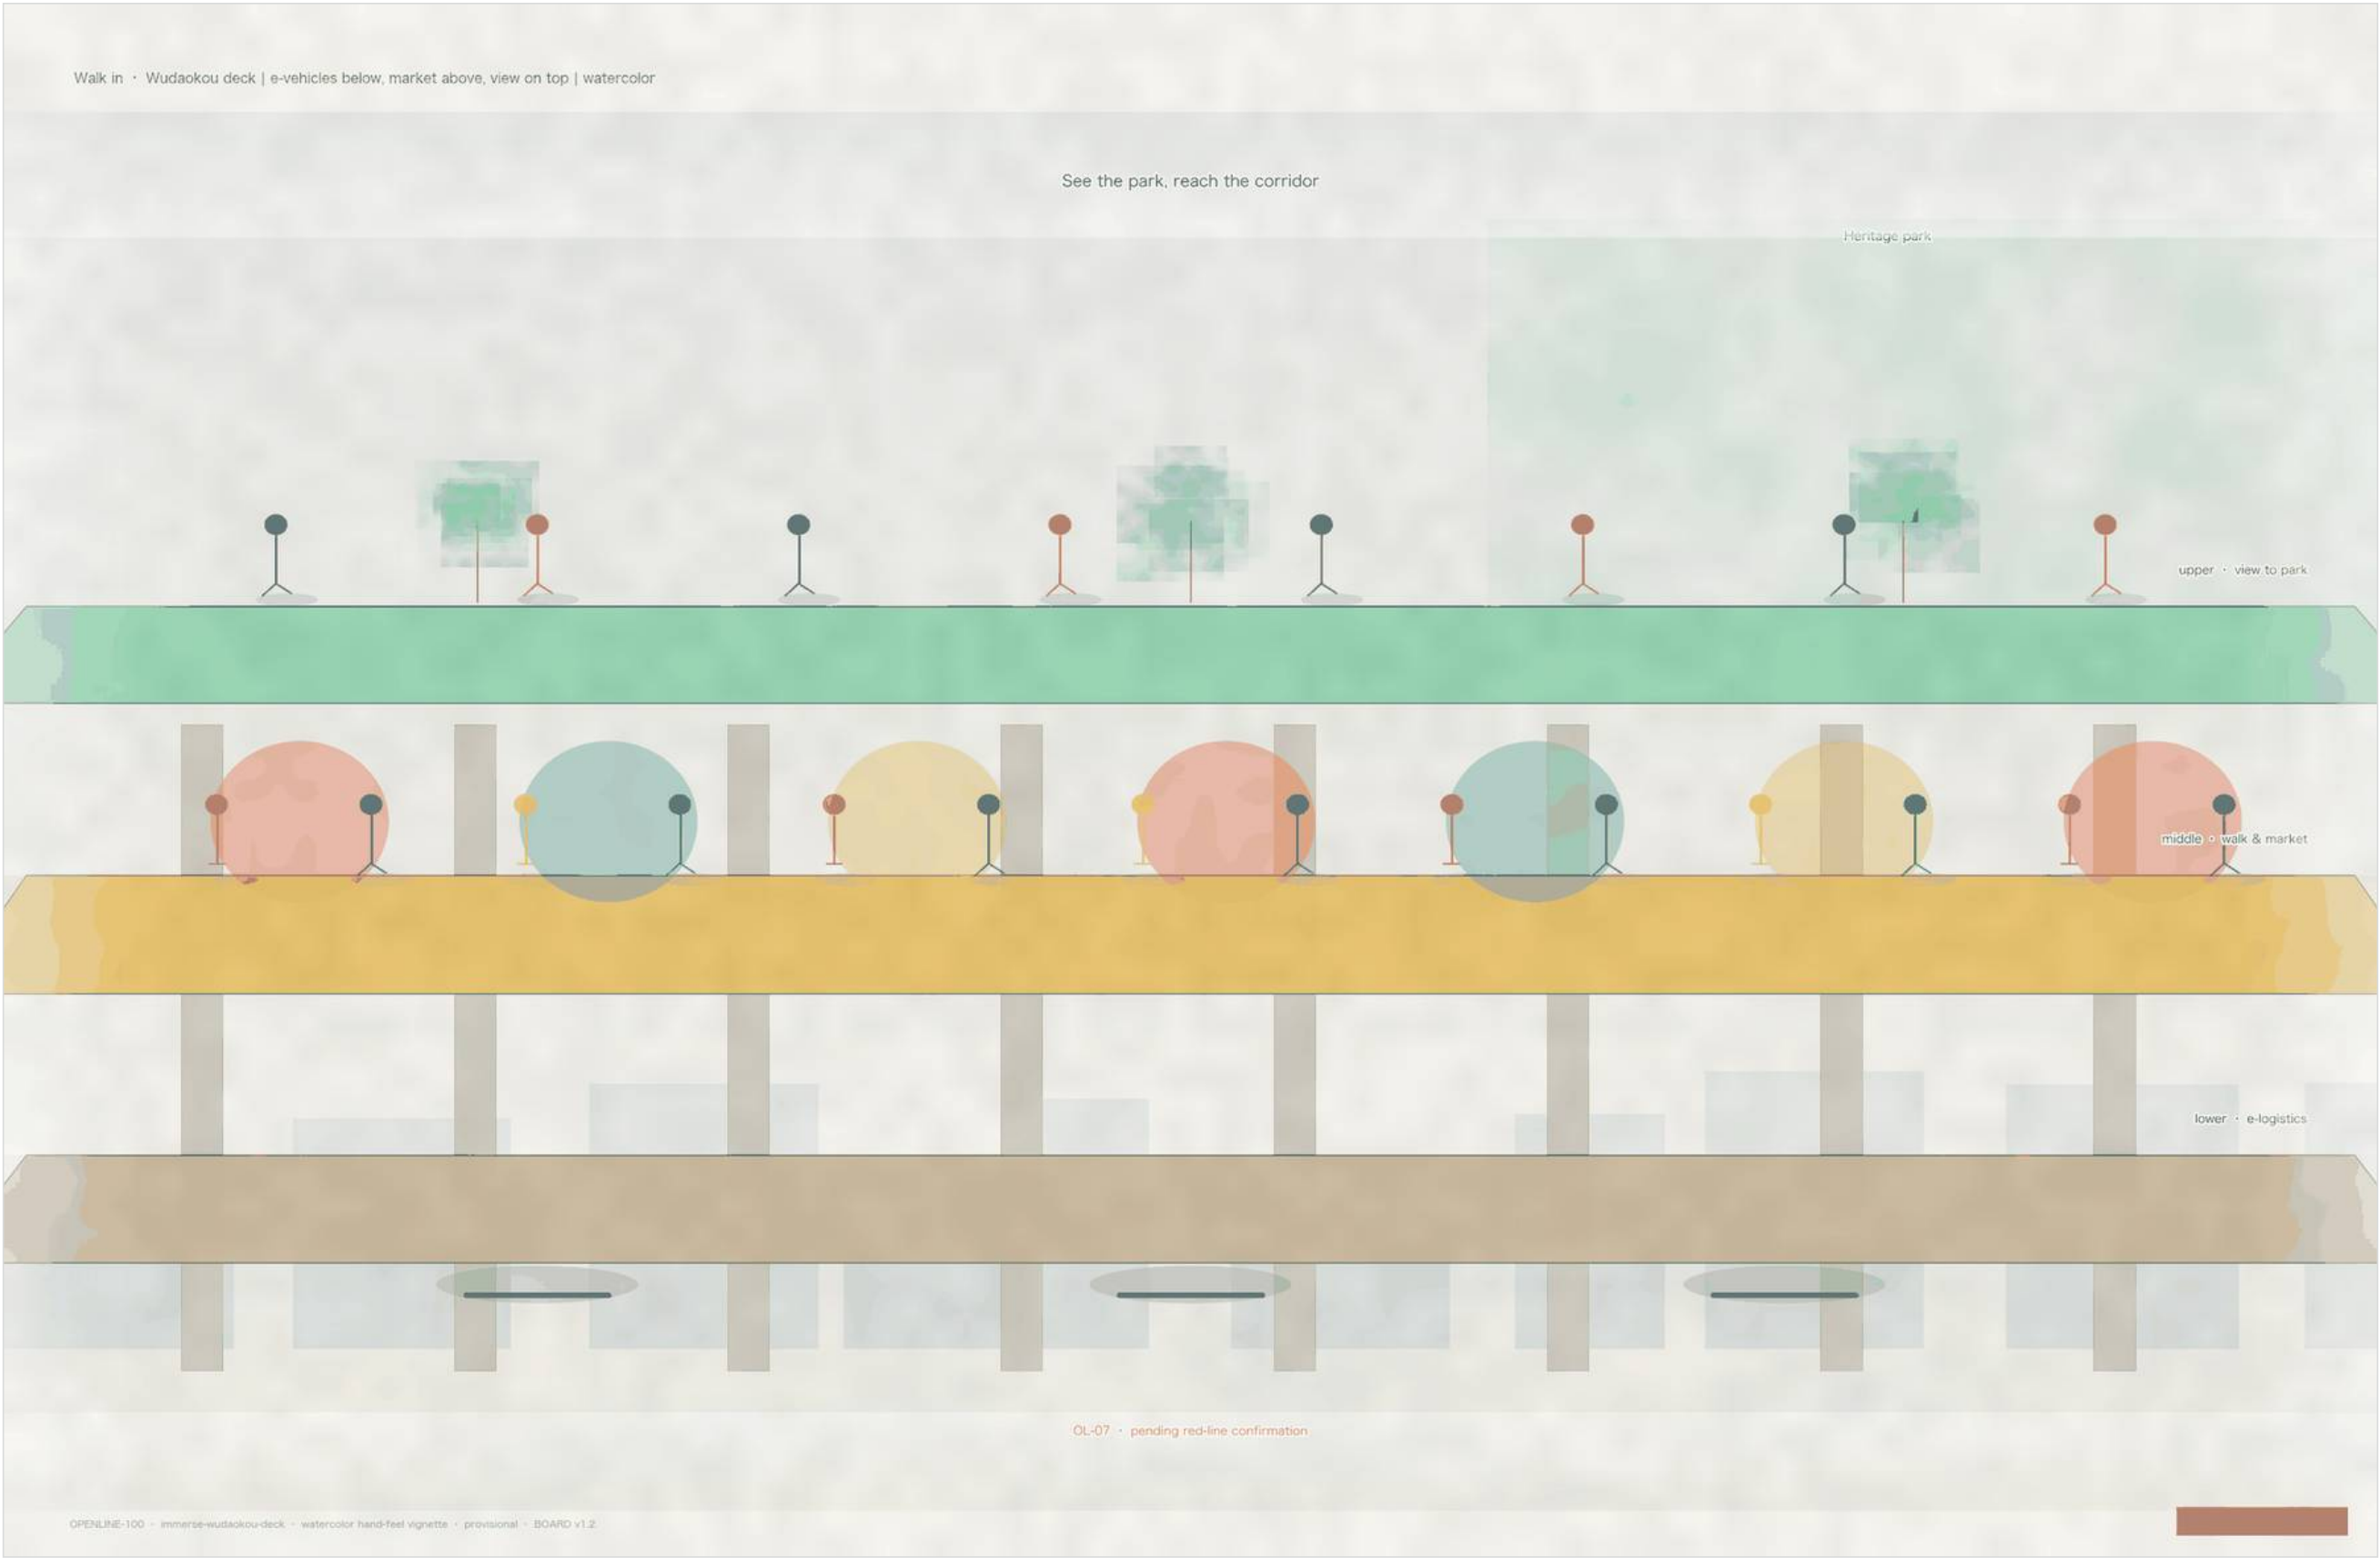

deck unbolts → asset relocates

a wrong demo is not sunk cost

the real reason to go first

22 Immersive ①: morning on the L1 ground walk

23 Immersive ②: afternoon on the Wudaokou deck

24 Immersive ③: dusk aerial over the Dazhongsi segment
